>What 10-meter mobile rigs are currently available?

Copper just brought out a new line of inexpensive models from $139.99-$179.99. Two mobiles...the Eagle Sidewinder 400 and the Euro 3900, and one base...the Eagle Tomahawk. Wouldn't expect a great deal, though, considering the low price. For instance, power output on these is only 4 watts on AM, 12 PEP on SSB.

I'd choose a used HR-2510 instead...IF you can find one that hasn't been "golden screwdrivered" by now.

Hopefully the next time you make a "midnite run" you are lucky enough to
pick a house where the owner has a double-barrel full of double-odd-buck,
and you catch a load in your ass. Destruction of personal property is NOT
the type of activity we as hams should be promoting. Go back to CB with
your buddy Spew Durigan, we don't need your likes around here.

People, people.....PLEASE.... This group should surely represent the spirit
of amateur radio first and foremost!!
Don't slam ... or tease .... or tear at people who come here for help with
what they are doing for fun.

Please think about sending a helpful or friendly reply (or none at all) and
read it yourself to see if you can figure out what it might sound like to
others who are here in good spirit.
The written word is very different from verbal communication and what is
said with a lift or a smile may seem hurtful on the page.

Anyway sorry to seem so serious .... This group really is a lot of fun.

Thanks , 73's John KD0OM

Yeah, yeah, yeah. . .

I like Wayne Green. Sure, his columns are wacked-out, and 73 magazine is one of the most crudely layed out, visually unappealing periodicals out there (my grandmother's monkey could do a better job with Pagemaker 1.0) But as the masthead says, its "Ham Radio Fun!" Here's some recent samples from the QRX department:

Transceiver ad translations:

"Advanced Design"--Upper management doesn't understand it.

"All New"--The plugs, jacks, and connectors aren't compatible with anything else on the market.

"Breakthrough"--We ignored everything we learned in developing the previous design.

"Cutting-edge design"--Designed around a bunch of free samples from a salesman. He claims the production units will work just like the samples.

"Energy Efficient"--Almost unmeasurable power output--you'll need a linear to work anyone but your next-door neighbor.

"Field Tested"--Manufacturing doesn't have a test system.

"Foolproof Operation"--We eliminated most of the controls.

"Futuristic Design"--The mold for the plastic case got screwed up, that's why it looks so weird.

"ISO-9000 Certified"--We have no idea what this means, but our competitors claim they meet it, so we probably do too.

"It's Here at Last"-- We completed a 26 week project in 48 weeks.

"Maintenence Free"--it's impossible to fix.

"Meets Quality Standards"-- The on/off switch almost never breaks. We haven't checked the rest yet.

"Mil-Spec"--From the folks who brought you $600.00 toilet seats.

"Modern Suppliers"--The IC from the RF output stage is available solely from a company in Bangladesh.

"New"--it comes in different colors than the previous version.

"Revolutionary"--the knobs go round and round. . .

"Unprecedented Performance"--Nothing ever has had as many out-of-band harmmonics as this thing.

"Years of Development"--we finally got one to work.

N5HDQ quotes and then sez:

> When I arrived last August, the repeaters were very
>> active but... from around November... the amateurs just started not to
>> bother with their radios.
>>
>
>That's the way it happens here when there is someone everyone iswanting to
>avoid.
>They get off the repeater and work simplex.
>
>Curtis .. N5HDQ .

Once again, Curtis, you took the words right out of my mouth! Darn, I can't get here fast enough--you always get the good response in first! (And they ARE good!)

Anyway, we do the same thing in my area. We have several code phrases to indicate everyone is to shift to another repeater, or to simplex. One is, "Call me when you get to your driveway." Another is, "When are you gonna come south, again?" The group knows to immediately QSY. (The word "South" indicates we're going to the repeater whose town has that word in its name).
We primarily use this when a hacker comes on the repeater. Everyone suddenly disappears, and the guy is left on an empty frequency. But he DOESN'T KNOW we moved off--he just sits and wonders why suddenly nobody is speaking.

We get a good laugh every time we do it!

>email of my own to go out, I was going to address it directly to them.
>In other words, turn the tables on them.

Good idea. They generally are using fake e-mail addresses, but there should be something in the body of the ad to permit responses. I think it is a lost cause, however. It's just a numbers game. They're probably making money, or they would not keep doing it.

No, you silly little codesucker you. It is not for discussing the weather. "misc" is for anything related to amateur radio that does not fit neatly into another category. CW testing does seem to belong in "policy".

Also, since most hams read all the ngs under rec.radio.amateur, it is wasteful and rude to cross-post. All you are doing is soaking up bandwidth. I always heard that the Japanese culture placed a high value on politeness. Cross-posting is not polite.

By the way, since you do not have a US address, you are ineligible for a US amateur license anyway, so why should you be concerned with OUR testing requirements?

I wouldn't mind you sticking your nose into our business if only your posts made a credible attempt at logic and reason. I have used the term "non sequitur" to describe your insane little twips of irrelevant and irrational babbling at least twice. Have you bothered looking it up in the dictionary?

Sorry this text is translated with the computer

Hi,

I would build for my ship (steel sailboat) one SSB antenna . On the
eightstay I have not good experiences.
It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
to 24 MHZ long the entire maritime mobile service field and for the entire
maritime mobile service field
Now my question:
Since these antennae cost approx 600 DM would like to build themselves.
Where I can find a manual?

Klaus

Curtis.... You stole my byline...

You guys hit the nail right on the head. I keep hearing about the fact that CW is no longer being used by the maritime services, or by the military, etc. Who the hell cares. If you don't want to use CW, now is the time... "enlist." In the military that is... Ham Radio is just what you said it was, "a hobby." It has a life of it's own, defined by the individuals in it's ranks. There is no comparison to commercial, military, or maritime services, except for the brave few who have used the key as means of communicating in those services, who also hold a ticket.

I grow tired of the comparisons that would lead one to believe that if we don't embrace the no-code notion, that some how we aren't "up to snuff." With who, and at what expense? I have fond memories of being a 16 year old kid in high-school and being able to practice CW with my other high-school friends on the CB, using code practice oscillator's till we got it down well enough to sit for the test. At that time though it was the "Novice" test and it was good for just 2 years. Some of you out there remember when it was good for just 1 year I'm sure.

I'm not trying to beat on anybody here, but 23 years later I still see the occasional fella that I used to talk to on the CB, and he'll say to me... "Hey Jon, I'm still thinking about getting in to Ham Radio."

A funny thing has happened around here that is easy enough to explain if you think about it. With the advent of the "No Code Tech. Ticket" we are seeing quite a few people coming to class early for Cw practice. Now that the heat is off, and they don't actually have to pass it to get a ticket, they are at ease, and seem to have bought in to the program, and are having the time of their lives, learning a new language that very few will ever take the time to learn. They are carrying on Marconi's legacy, and that's all right with me.

Topics appropriate for this group include anything that would
be out of place in any of the speciality groups. The .policy
group was created specifically to take the code debate off
of this group.

Our speciality groups include r.r.a.antenna, .homebrew, .dx,
.boatanchors, .policy, plus others.

So now that you've been informed of this, Masa, will you please
stop starting code-related articles on .misc?

Hi Jim,
The "F" beacon has been around for years. It comes from one of the
Russian countries (or a former one). You must must just have
put up your first antenna if you're only hearing this now!

There are other letter beacons on 40m; "C" is well known.
Somewhere in the archives there is a post with all the info on
the Russian beacons.

Geez Bill, a portion of the more often used Phillips code appears in
the ARRL's Operating Manual (which no ham should be without).

Learning a second language isn't required for any amateur license,
but it could double the number of new friends you might make on the
air.

Hi Eric,

It would have been back during the build up for Desert Storm.

I did not know him as well as some other hams here did.
I can try to get his call sign if you like. Pretty sure his name
is Gary and he went to Arkansas where a school for the
blind is.

1211. TUO-1 VHF transmitter

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-10 00:00:00 UTC
From: bry@REMOVETHIS.mnsinc.com
Message-ID: <34e04da0.7432656@news.mnsinc.com>
Source record: 178918
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.misc,uk.radio.amateur

You can find some photos of a most unusual VHF transmitter
on-line in the newsgroup:
alt.binaries.pictures.radio

This week, we have a model TUO-1 transmitter picture!
It came from W5JI who provides the following description.

If your ISP does not provide the newsgroup:
alt.binaries.pictures.radio

ASK them to start carrying it! You will be glad. There are
a number of recent postings there with pictures of radios
that you will enjoy seeing!

Date sent: Mon, 9 Feb 1998 21:18:56 -0600 (CST)
To: baswaplist@foothill.net
From: Jim Coe W5JI <jcoe@brightok.net>
Subject: FS 1946 TUO-1 exciter

I have two exciter/transmitters surplus to my needs.
They are identical and are Type TUO-1 VHF by Air
Associates of Los Angeles circa 1946. They were
manufactured for the old Civil Aeronautics Administration
under contract CCA 25300 Order No. 47-2926

I call them exciter/transmitters because they were
meant to be exciters for high powered amps, but they
can actually be used as standalone transmitters if you
want.

They consist of an 807 xtal osc/tripler driving an
807 first doubler which then drives an 826 second
doubler followed by an 826 third doubler/output stage.
The units are 12"h x 13"d x 31" w and are all
aluminum construction. This unit was the exciter stage
for the TUO-1 transmitter which looks like a BC-610
on steriods.

The unit is designed for 108-118 Mhz but could easily be
modified for 144 mHz or even 50 mHz. I picked them up for
parts but they are so well made, I have not had the heart
to break them down. The time has come to use the parts or
sell the complete units to someone who will use them.

I have an original manual for the TUO-1 that I will
include (If the units are sold singly, one buyer will

get a copy.................)

The units are big, but not very heavy so I'm willing
to ship them, but a buyer within a 200 mile radius
of Davis, OK, may have the edge since I'm willing to
deliver them........I'd like $ 75.00 each or $135.00
for the pair plus shipping........I'm sure the list
members will let me know if I'm off base.

I'll answer questions by email...off the list...please!

Thanks es 73's.....
Jim Coe W5JI

1216. Those wacky 40m letter beacons

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-10 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6bpq8o$589$1@w3eax.umd.edu>
Source record: 178923

It's unclear where they originate from BUT they're very much audible on any night.

My personal favorite, being a QRPer and hanging out around 7.040 MHz, is the "P" beacon that can be heard right around 7.039 MHz.

Remember the "number lady," who would sit on a frequency and just say numbers for hours on end? "One Four Six Three Seven Four Two Zero Nine...."

Supposedly, she was passing messages to Russian spies worldwide.

The following is merely hearsay:

Word has it that the letter beacons are relics from the old USSR, and when the nation split, the knowledge of "where those pesky beacons are housed" became sadly lost. Institutional knowledge disintegrated awith the the breakup of the Union, leading to questions such as,

"I wonder where those nasty 'suitcase nuclear devices' are?"

So the beacons, running on solar power and batteries, are busy putting out the last letters each of them was set to do, and since nobody remembers where they're physically housed, not much is being done to shut them off. So there they go, still trying to send messages to long-unemployed, and probably still quite bitter over the breakup, ex-Soviet spies...

But again, it's all just a guess. Yours is a good as mine.

1220. My Code Proposal

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-10 00:00:00 UTC
From: sciguy8000@aol.com
Message-ID: <19980210144900.JAA21632@ladder02.news.aol.com>
Source record: 178927

My proposal has two options to keep CW but make it
somewhat more attainable to the average person. It
is time to really make the ham radio hobby available
to anyone that can pass the theory and some code.

For those who are die hard CW guys my options
keep CW as part of the mix.
For the others it makes it much smoother
and gradual to attain the higher classes
of licenses.
Option A.
Novice 5 wpm
Tech no code
Tech plus 5 wpm
General 10 wpm
Advanced 15 wpm
Extra 20 wpm

Option B.
Novice 4 wpm
Tech no code
Tech plus 4 wpm
General 8 wpm
Advanced 13 wpm
Extra 18 wpm

Could most of you support either of these??
or are we all becoming so polarized over this
issue that our stupid pride will keep us from becoming
the Ham Fraternity/Sorority we used to be????
Please everyone think about it!! Thanks for listening!

I am personally working on CW to upgrade from
Tech Plus to General. I have no gripes but I
know many valuable and great people we could
add to our ranks if the code advancement were
more gradual. It is NOT a stupid idea but it
is a rational answer to all of the concerns.
73 to you all,
W7GGR

Hi!
I am studying for my Novice License, well, I hope to pass the Novice test! :) So, I'm studying for the CW test.

I notice in many magazines that they sell a pager-sized morse code tutor (for the truly nerdy). Wellllll, I'm pretty darn nerdy, and I was thinking about buying one.

Has anyone out there had any experiences with them? Are they worth it?

(I also saw one in Radio Shack as well...anyone had any experiences with that?)

rcrusoe@aol.com (RCrusoe)
shared these priceless pearls of wisdom:
CW testing does seem to belong in "policy".

And pray tell what deity died and left you in charge of deciding when and where any other person can post an article??

You might also consider using the correct term. CW is A0, which is prohibited except for brief testing periods. I think you mean A1.

->By the way, since you do not have a US address, you are ineligible for a US
->amateur license anyway

Really? And where did you come by this marvel of interpretation?

97.9 "Any person except the representative of a foreign government is eligible for an amateur operator license."

97.43 Each applicant shall provide an address in the United States where the Commission may send correspondence and notices to the applicant [paraphrased].

So, sir, anybody, citizen or not (unless you are the ambassador for that government) can get an amateur license. You don't have to have your own address, you can use Aunt Mabel's or even the old standby "General Delivery" in the city of your choice.

->made a credible attempt at logic and reason. I have used the term "non
->sequitur" to describe your insane little twips of irrelevant and irrational
->babbling at least twice. Have you bothered looking it up in the dictionary?

Which "it"? "Twips"? You are right. It is not there. I'd put my own spelling and grammar house in order before taking potshots at somebody else.

Dang Dick, you are really living in the past. If Saddam Hussein's armed forces couldn't jam the U.S.Military, how do you propose for Procoders to jam SS signals they can't hear with signals that the SS hams can't hear? Hope you realize that the above posting is an absolute joke.

No, but you can be sure it was the "easy code test" that allowed it, to say nothing of the "easy theory test". It's a sure bet that any *real* test would have 'filtered' him, based on his posting here and elsewhere.

Yeah, that's what he said, even in 'his' words the meaning is clear. So why does Cecil hold up for him by trying to change his meanings where it is completely clear, if admittedly rarely so in his case, this time? You don't suppose the No-Code Agenda is at work do you?

Well, Yes, CB has never had anything to do with code, nor many of it's inhabitants other than those who decided to get a ham license--and learned code to pass the tests. Strangely, many of them are now high speed code operators and code retention supporters! Others-perhaps including you?- are anonymous scofflaws who inhabit the 'band above the CB band', a true misnsomer if there ever was one.

1231. Repeater Modifications by Information Sources

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-11 00:00:00 UTC
From: rbw <rbw@testengeer.com>
Message-ID: <01bd3737$3535f720$4c78f3cf@primary>
Source record: 178488
Cross-posted to: alt.ham-radio.mods,alt.ham-radio.vhf-uhf,rec.ham-radio,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.swap

REPEATER MODIFICATIONS FOR POPULAR MOBILE RADIOS!

Information Sources has compiled an impressive collection of well written instructions for converting many popular commercial mobile radios into full repeaters. Some of the files, such as the MASTER2.TXT file (included below) which describes how to wire a Mastr II mobile radio for use without a control head, are original works and are copyrighted by Information Sources. The information may not be reproduced or republished via Internet, CD-ROM, or any other media without the express written consent of Information Sources.

The repeater modifications are available for sale on 3.5" HD floppy disk, IBM PC format only. All information files are ASCII text. The following files are currently offered on the Information Sources Repeater Modifications disk:

MICORDUP.MOD Converting UHF MICOR mobile radio into a repeater
MICORUHF.MOD Converting UHF MICOR mobile radio into a repeater
MICORVHF.MOD Converting VHF MICOR mobile radio into a repeater
GE_EXEC2.MOD Converting GE Exec II radio for repeater & 9600 pkt
GE_MVP.MOD Converting GE Custom MVP radio into a repeater
GE_PACKET.TXT 9600 and 1200 Baud packet on GE EXEC II and MVP
GE_MVP.TXT Basic MVP information and 1200 baud packet use
GE_MVPEX.MOD Another 9600 mod for GE_MVP (Complicated!)
MAXTRAC.MOD Converting the MAXTRAC for operaion on 900 ham band
MITREK.MOD Converting MITREK mobile for 9600 duplex packet
MITREK2.MOD Converting MITREK mobile radio into a repeater
MITREK.9K6 Converting MITREK mobile radio for 9600 packet
MASTRPRO.MOD Using GE Master Pro receiver strips for repeaters
MASTER2.TXT Wiring the Master II for use without Control Head
MASTER2.MOD Converting GE MASTER 2 mobile radio into a repeater
MOTOSPKR.TXT Adapting and wiring Motorola Amplified Speakers
WILSON.TXT Programming Wilson/Regency synthesized mobile rigs
BR.COM A simple DOS file viewing program for handy use
BABYRPTR.TXT Convert a Fisher-Price baby monitor into a repeater
LIST.COM Another easy to use file viewing utility program
PKUNZIP.EXE Dearchiving utility program to use with *.ZIP files
PD-203.ZIP Shareware program for POCSAG (pagers) monitoring
PE-205.ZIP Shareware program for POCSAG encoding(transmitting)
\DECODE*.* PD-203.ZIP file de-archived - POCSAG decoding
\ENCODE*.* PE-205.ZIP file de-archived - POCSAG encoding

The following is a reproduction of the MASTER2.TXT file which is included on the Repeater Modifications disk described below offered by Information Sources. The MASTER2.TXT file describes how to wire the GE Mastr II mobile radio for operation without the control head and control cable.

Wiring the GE Mastr II without Control Head

I'm sure many of you out there already use Mastr IIs without control heads but there are probably many who are not too familiar with this radio. There was a recent article about using the Mastr II mobile as an emergency intermittent duty repeater by Terry W. Ellis in the September 1993 issue of Mobile Radio Technology Magazine. The article did not elaborate on wiring the Mastr II without a control head. It can be done. I will not go into the modifications needed for repeater operation. Rather, I will just explain how to wire the Mastr II radio for operation on a single frequency without the control head.

1. Ground (called A- by GE) comes out to pin 30 or pin 21 on J901 the Main control plug on the front panel of the radio.

2. 13.5 volt DC must be connected to pin 29 (called A+ by GE) and pin 24 (Ignition Switch) of J901.

3. The Tx PA supply is separately wired to the big red and black wires at pin 39 (TX+) and pin 40 (TX-) of J901.

(NOTE: Be sure to use fuses for both the PA and the low current Rx and Tx exciter even when testing and wiring on your bench. I was lucky and only smoked a few small traces on the Mastr II front panel board which I was able to bridge with new wire. The damage could have been much worse. Reverse polarity diode protection (like the PA has) would also be a good safety practice for the rest of the radio unless you like the smell of burning radio parts!) (I'd suggest 15 or 20 amp (for lower power testing) on the PA and 2 or 3 amp maximum (for testing) on the Rx and Tx exciter.)

4. The volume and squelch controls can be made with internally mounted 10k trimpots. High side on both vol and sq connect to pin 11 of J904 RX/IF/AUDIO/SQ board. (GE conveniently labels all the pins connecting the major sub-assemblies to the front panel and system board of the Mastr II.) Low side vol and sq connect to pin 12 of J904. Sq center control arm is connected to pin 10 of pin J904. Volume center control arm is connected to pin 13 of J904.

5. The frequency or channel is selected by taking the F# pin to ground. Grounding either the Tx or the Rx F# pin also grounds the corresponding F# channel on the other Tx or Rx. (I guess you could rig the radio for multi-channel use by making a multi-select switch for each channel to ground.)

6. Audio (Speaker) output is taken from J904 pin 19. Pin 18 of J904 (labeled Speaker Low) is connected to ground. Connect an appropriate loading resistor (8 to 20 ohm 1 or 2 watt minimum) to prevent audio amp oscillation if you do not have a monitor speaker connected as with packet, etc. Speaker audio could also be taken from the red test jack as explained in the next step.

7. PTT and mike connections can be taken from the red test set jack, J905. Here is the pinout:

Pin 1: Speaker high (Audio out) Pin 6: A- (Ground)
Pin 2: Speaker low (ground) Pin 7: Microphone high
Pin 3: Regulated 10 volt Pin 8: Microphone low
Pin 4: A+ (13.5v) Pin 9: A- (Ground)
Pin 5: PTT Pin

Note: The radio keys by taking pin 8 on U901 (10 volt regulator) to ground. If you operate the Mastr II WITHOUT the CHANNEL GUARD strip installed you will need to jumper pins 6 and 8 on J908, the Channel Guard plug in card. If you try to key the radio at the meter jack without the Channel Guard board installed you won't get anything except frustration. I was dumb-fuzzled for almost a week before I noticed this one little bridge on the schematic diagram of the front panel board. Lesson: If you intend to use Channel Guard keep the card installed when you test the radio. If you do not use Channel guard, jumper these two pins so the PTT will work properly from the red metering jack, J905.

To kill Channel Guard (e.g. for tuning or testing the receiver) take either Pin 6 of J901 (front panel plug) or Pin 3 of P908 (Channel Guard plug) to ground.

Having a schematic diagram for the Front Panel & System board for the Mastr II is certainly a great aid. It is very difficult to trace out the connections without a schematic since the board has circuit traces on both sides and uses a number of holes to pass circuits on both sides of the board.

I have found an easy place to drill holes for wiring access is on the black plastic front panel main wiring connector. There is an area on outer side of the two big pins to the Tx PA which can be drilled out to pass control wires. I tried to solder directly to the pins on the main connector without much success. I like the internal wiring better. (Note: Molex pins slide very nicely over the pins on the Mastr II front plug. Use heat shrink over the connectors to avoid shorts and add a neat appearance. Also, you can solder directly to the large pins for TX PA by scrapping off the plating and soldering directly to the bare brass pin.)

All the information on the disk is believed to be accurate, however some errors may inadvertently appear and the user assumes full responsibility for the use and application of all the information contained on this disk. No warranties of any sort are expressed or implied. Referral to the appropriate service manuals for the various radios discussed is certainly recommended in every case. The information on the disk presumes the user already has familiarity with the radios discussed, and hopefully, a copy of the service manuals for the radios.

In case service manuals for the radios of interest are not available to the user this distributor has prepared concise written and illustrated operating guides for the General Electric Executive II radios, Master II radios, and Custom MVP radios. Each guide runs about 20 to 25 pages in length and contains necessary schematic diagrams, exploded parts diagrams, tune-up instructions for VHF and UHF radios, and repeater modification instructions with diagrams, as needed. The guides are available for $15.00 postage paid when purchased separately, or for $12.50 when purchased with the repeater modifications disk. (See special pricing offers following the order form, below.) Much of the information on the disk is included in the GE operating guides, but the guides additionally include tune-up instructions, schematic diagrams, and additional helpful hints which are not included on the disk.

The Repeater Modifications disk is available by mail by using the order form below:

S> keep CW as part of the mix.
S> For the others it makes it much smoother
S> and gradual to attain the higher classes
S> of licenses.
S> Option A.
S> Novice 5 wpm
S> Tech no code
S> Tech plus 5 wpm
S> General 10 wpm
S> Advanced 15 wpm
S> Extra 20 wpm
S>
S> Option B.
S> Novice 4 wpm
S> Tech no code
S> Tech plus 4 wpm
S> General 8 wpm
S> Advanced 13 wpm
S> Extra 18 wpm
S>
S> Could most of you support either of these??
S> or are we all becoming so polarized over this
S> issue that our stupid pride will keep us from becoming
S> the Ham Fraternity/Sorority we used to be????
S> Please everyone think about it!! Thanks for listening!

Why??? is my question. IF code is going to be kept just what is wrong with what the requirements we have now? The difference between 4 and 5 for the novice is totaly ingnisificant. And all the others are close enough to be Foolish to Go Backwards! What we have now is sufficent to retain Code as a Viable form of Emergency Transmissions in time of Disaster. And After all that is the biggest social redeaming REASON for Ham Radio. The fact that in times of Non Emergency many enjoy it dosen't even enter into the Picture. AS SOON as we no longer are looked at as a Emergency Comunications Resource HAM radio is DEAD! We will NOT be able to justify any more of the Very Short supply of Radio Spectrum than that given to CB'ers or the New Family Radio service..
THINK about it all you CODE BASHERS out there!!

The origional enquiry was a marine band radio enquiry, is that not
allowed in rec.boats.cruising? You should have removed r.b.c from your
cross post so that any responses (inc this) would have missed your
newsgroup.

Just as you don't understand the newsgroup hierarchy (code/nocode
articles belong in .policy), you fail to understand the reasons
code is still required for HF access. Let's QSY to .policy, and
I'll explain the reasons to you (e.g., about half the HF QSOs are
conducted via CW, CW is allowed on any HF amateur freq'y, it's the only
common mode amongst the world's HF-licensed hams [except the JA CB-like
license]).
73, Jeff KH2PZ (fol-ups: .policy)

I have a Jeep Grand Cherokee, a few years old. I'm starting to toss around ideas as to how to mount radio pieces of equipment in terms of radios/scanners/etc.... Just curious what suggestions people have for cars of this type. At some point I was going to put a 6CD changer in the console compartment, aside from there, when I look at the dash/console, I can't seem to find any surface area for a radio, short of sticking stuff on top of the dash which is always a last resort. Any suggestions, preferably via email, would be greatly appreciated. Thanks.

Greetings

I don't seem to be able to find the original message, so I will comment via this one.
On the surface your idea does have some merrit. However, I think you will find that most amateurs as keep using the code find that their speed increases the more they use it.
Shorty after I got my first licence, 10 wpm, I found it somewhat difficult to copy even 10 wpm, I was still quite nervous.
As the weeks turned into months and a few yeas later, I found my code speed sometimes surpassing 20 wpm. I spend quite a bit of time in the novice bands so I really didn't have too much practice with 20 wpm.
I guess what I am driving at is that, when you are starting out and trying to achieve these code speed endorsements, cw does seem to be one of the most difficult things to pass. However, once you have mastered the code and use it almost by second nature you will find that your speed increases almost without your being conciously of it.

In Canada, before the introduction of the no code licence, our first exam was 10 wpm and our second, advanced, licence was 15 wpm. Though it was 10 wpm we still had lots of would be amateurs passing 10 wpm.

Don't be to quick to challenge 5 wpm as possibly being too high, 10 is twice that and 'we' did passed it. Now, as I recall, it is 5 and 12.

Sad, but true. I subscribed to 73 magazine for a few years, but started
to notice an increasing trend in less amateur-radio-related stuff, and
more Wayne Green ranting editorials. I voted with my wallet, and just
recommend you do the same. Wayne Green might have been important years
ago, but unfortunately today he has the credibility of Uncle Willy sitting
in the corner rocker drooling his last days away....

I want to get the MK-II for my dads birthday. But he will want to use it mobile but he can only use 20 inch or less antenna. Which I understand is a problem with 1mhz - 50mhz. I was hopping the at180 antenna tuner will allow use of a small antenna but have not been able to find out.

His car already has an antenna for the 144mhz part of the MK-II

What are you willing to do? Consider radios with remote detachable faces and remote mounting kits - that's how I mounted my Alinco dual band two-way, and an Icom HF rig. Mount the control head on the dash somewhere, and stow the radio chassis under the rear seats. It sure makes things easier. And cell phones go well on stalks with hands-free cradles.

Good luck,

Doug, N6XQY

> allowed in rec.boats.cruising?

Sure it is. We talk about SSB and radios often. What we object to is cross-posting, and this thread (now threads) is a good example of why. These "debates" stray from the subject of rbc and end up mixing us up in all kinds of things from other groups. Cross-posting is a violation of the charter. Very simple.

> You should have removed r.b.c from your
> cross post so that any responses (inc this) would have missed your
> newsgroup.

Maybe. I thought about it, but I decided to leave it on so others could pick up on the idea. It usually takes one or two messages for the group to get on top of something... But basically you are right, it should be removed to stop the cross-posting. BTW, my point was not meant to be unfriendly, just to try to keep the situation from escalating.
Mark

1255. YL-OM Contest

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-11 00:00:00 UTC
From: Nancy Rabel Hall <no-spam-kc4iyd@geocities.com>
Message-ID: <34E27E6A.1EDDDE23@geocities.com>
Source record: 178512

Hi all,

The Young Ladies Radio League (YLRL) will be sponsoring
their annual YL-OM contest.
The phone portion is this coming Valentine's Day weekend and
the CW portion is the
weekend after. Below are the complete set of rules for each
contest. If you have
any questions, contact Cleo, the YLRL VP at the address
below or email me at
kc4iyd@geocities.com. BE SURE TO REMOVE THE "NO-SPAM-" FROM
THE HEADER IF RESPONDING
TO THIS POST. I do not post very often but, contrary to what
people say, everytime I
have posted to this newsgroup, I have gotten unsolicited
emails.

==========
YLRL Sponsored YL-OM Contest
Phone 1400Z Feb. 14 to 0200Z Feb. 16
CW 1400Z Feb. 21 to 0200Z Feb. 23.

All licensed men and women operators worldwide are invited
to participate.

OM's call "CQ-YL" - YL's call "CQ-OM'

All bands (except the WARC bands) and modes may be used. No
crossband, net or
repeater contacts. On CW (rtty, pactor, amtor count as CW),
SSB or FM only one
contact is permitted with each station on each band.

Exchange RS(T), serial no. and ARRL section/ VE
province/DXCC country.
Entries in your log must also show: time, band, date, and
transmitter power.

SCORING:
(A) Phone and CW will be scored as separate contests.
Submit separate logs for each
contest.

(B) Score each band separately. One (1) point is earned
for each station worked on
each band. YL's count only OM's, OM's count only YL's. Add
together the QSO points

earned on each band.

(C) Multiply the number of QSO points by the total number of different ARRL Sections/
VE Provinces/Countries worked.

(D) Each contestant using power output at all times of 100 watts or less on CW or 200
watts PEP or less on SSB multiply the score claimed in (C) by 1.5, the low power
multiplier. Those not using low power are not entitled to power multiplier, and they
are limited to 750 watts on CW and 1500 watts PEP on SSB.

All logs must show your ARRL Section/VE Province/Country to qualify for awards. If you
have 200 or more QSO's, submit a separate log for each band and submit a dupe sheet.
Log photo copies are OK. Please type or print logs. Logs must be signed and must show
score claimed. No logs will be returned. Submit separate logs for each contest.

ALL LOGS MUST BE POSTMARKED NO LATER THAN 30 DAYS AFTER EACH CONTEST ENDS
AND MAILED TO: Cleo Bracket, K0JFO, 810 Town Square Dr., Fremont, NE 68025

AWARDS: First place phone YL: cup; OM: cup. First place CW YL: cup; OM: cup.
The second and third YL and OM winner's in each contest will receive certificates.
The winner of the phone contest is eligible to win the CW cup. Certificates will be
awarded to the high YL and OM phone and YL and OM CW winners of each US and VE call
district and for each country, provided there are at least ten valid contacts on the log.

SUGGESTED FREQUENCIES

CW: 80 meters 3.540 to 3.570; 40 meters 7.040 to 7.070, 20 meters 14.040 to 14.070
15 meters 21.120 to 21.150, 10 meters 28.180 to 28. 210

SSB: 80 meters 3.940 to 3.970, 40 meters 7.240 to 7.290, 20 meters 14.250 to 14. 280
15 meters 21.380 to 21.410, 10 meters 28.280 to 28.410

==========

If you have any questions, feel free to email me at kc4iyd@geocities.com.

Dear Mike in MO,

You are exactly right. When I got into ham radio I started to buy anything I could find on the newsstand that was ham radio related. I bought a few 73s, but what I read were the hardware articles, never reading the Wayne's "editorial" column. One night I was stranded on a business trip and the only thing I had to read was a 73, and after finishing the hardware related articles I read his "editorial". I was astounded at what I found. The man is a nut case. Paranoid and delusional are two words that come to mind, but the words are inadequate to describe Wayne Green, at least if he truly believes the crap that he writes about. It has been a year and I haven't purchased another copy of 73. I am not about to support that weirdo with any of my money!

Hi there,
Can anybody help me? I need additional 8 or 16 MB RAM Module for my Packard Bell Diplomat subnotebook. Unfortunately it is not for buying here in Europe. So I asked my friend (not a ham) in California for a help. A few minutes ago he has written me that he is not able to buy that too! Does someone know a sure source for buying needed RAM Module? Thank you very much for helping me and best 73s from Poland de George, SP2BRZ.

Sure, Uncle Wayne might be a couple french fries short of a happy meal, but he can be pretty entertaining. I like the way he keeps us all in suspense about his cold fusion research. I'm really on the edge of my chair over the subject.

I have never built the bio-electrifier yet, but I bet the big medical supply companies have one on the market soon for under a grand. =0)

If taking guys like Wayne Green seriously gets under your skin, just don't take him seriously. No biggie.

Sometimes there is some neat stuff in RTTY LOOP. It's not all editorial blather. Speaking of which, I bet a certain young Oriental fellow with an interesting slant on things would make a good addition to Mr Green's editiorial staff.

In article <19980210213900.QAA07095@ladder02.news.aol.com>, gdfthr768@aol.com (Gdfthr768) writes:

Thanks, Tim

You can indeed have worlwide communications with Amateur Radio, also called Ham radio. The HF bands especially. The 20 meter band has the best consistent global communications capabilities. You need at least a General class amateur license in the U.S. to use this band. For the Novice or Tech plus class of license, the licensee has priveleges on the 80, 40, and 15 meter bands which also have considerable long-range use. The no-code license in the US, the Technician class license confers privileges only on the VHF and above bands. Normally these higher frequencies offer communication ability only to line-of sight or a bit further distances, but certain conditions allow communications over distances of hundreds of miles. Some hams even bounce signals off the moon to other stations that are in line-of-sight with the moon. There are even amateur communications satellites that you can use with fairly simple gear.

CB is capable of fairly long-distance communications. However, that is not the purpose of CB according to the FCC's rules. In the U.S., you may not communicate or attempt to communicate wiht another station further than 250 km away.

What we usually refer to as shortwave radio is broadcast radio on the HF bands. HF, or Hogh Frequency, is simply all the spectrum between 3 and 30 MegaHertz. There are Broadcast bands, amateur bands, marine bands, and other allocations within this spectrum. The shortwave broadcast stations have fairly complex equipment and have gone through a pretty arduous process to get their license. Most shortwave broadcast stations have multi-million dollaar investments in their stations. You can tune in these guys from all over the world with a cheap receiver and a piece of wire out the window for an antenna.

VHF is Very High Frequency, and is that spectrum between 30 and 300 MHz. Again, there are bands here allocated for several different services. UHF is 300-3000 MHz, SHF is 3000-30000 MHz or 30 GHz, etc.

For more info, grab the FAQ file at my site,

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Subscribers: <554>
.....

>From the Editor's Desk:
I know that many of you acrorss the country have been busy repairing the damage caused by Mother Nature during the past few weeks. Please take a few moments and let us know what your group has been doing; I'm sure that the list will appreciate it.

Make sure to sign up for our ACS Emergency Response Institute in May in Sacramento! See 'Current Events' for more information...

--Dave Larton
.....

>From the mailbag:

From: John Peterson <eric@mail.arc.nasa.gov>
Subject: StoneFly News Bulletin......Storm Update

As of 10:35am (California Time) a steady rain continues to make things worse for an already saturated San Francisco Bay area. Flood warning are currently in affect for Santa Clara and Santa Cruz counties. All reservoirs have filled to capacity and are currently spilling over. Coyote Creek is currently flooding creating a bad situation for San Jose.

Weather forecasters predict this rain will continue until tomorrow, let up briefly, then begin again tomorrow night with yet another storm front.

The emergency operations center at Moffett Field, located next to Mountain View, is currently on a skeleton crew. All levees are being monitored for possible breaches. Mass pumping of these levees continue in an attempt to

relieve the excess water that is building up. Communities in the hills surrounding Silicon Valley are being evacuated due to the flooding and the mudslides.

Until a full blown activation of the Moffett Field EOC is announced, the Emergency Communications Center will only come up on the SHARES nets periodically to check equipment. We will notify all of a full activation, should it occur, via Email.

Trying to stay dry,

John Peterson
NASA/Ames Emergency Communications Manager

Dave:
Enjoy your newsletter here in Louisiana, here is a bit about Cell Phone and trunked systems we use here in Louisiana. Fact taken from Cell phone construction and QST Dec. 1992.
Martin D. Wade, N5PZJ
Races Officer-Lafourche Parish, Louisiana
ARES EC Lafourche Parish

Cellular and Trunking in Disaster Areas

With today's communications technology, it seems that we will never again be out of touch unless it is by our own choice for a little privacy. From cellular telephones that fit into a shirt pocket to 800 trunking systems and satellite telecommunications systems, we can reach out and contact someone with ease. Now that we have the Internet and e-mail, even the Postal Service appears to be slowly being relegated to the history books as we approach the millennium, yet we wonder if our level of technology, only dreamed of 30 years ago by Science Fiction, will always be there when we need it most during an emergency?

However, on looking back in history, we see that for all our advancements, we still are very much in the hands of nature. Not too many years ago, when Hurricane Andrew struck South Florida, the high-tech communications that were in place for both the civil population and government were severely damaged, leaving many areas without communications for weeks following the storm. In some cases, VHF simplex and HF operations provided by Amateur Radio Operators was the only means of communication available to local government and disaster-relief organizations.

Let's look at a scenario of what possibly could happen before, during, and after a major weather event. Suppose that a Category 5 hurricane is approaching the Louisiana gulf coast, with sustained winds of 130-plus miles per hour.

Before Landfall

The civilian population prepares for the storm by either boarding up or evacuating to shelters.
First, the hard-line telephone systems begin to bog down due to the sheer number of calls being made for contacting family and friends to make arrangements to meet or for letting family members out-of-state know that they are okay. Soon the system becomes overloaded, and the only thing you hear is "All circuits are busy now; please try your call later."

Second, those who have cellular telephones will abandon the hard-line system and will begin making their calls from their cellular phones. Then there is a repeat with the hard-line telephone system. hen too many people are making calls, the system becomes virtually useless. By this time, disaster service organizations like the American Red Cross and Salvation Army are gearing up to open shelters and move large amounts of equipment. This always requires coordination, and as recently as 5 years ago, the Red Cross used VHF-FM equipment for conducting their relief operations. However, most of the old VHF radios have been removed and replaced with cellular telephones. Third, in another section of the state, some members of other emergency management organizations begin to use their cellular telephones for the same reason. Somewhere along the line, the system begins a slow downward spiral toward collapse. This is not the fault of the cellular service providers, as their equipment was designed to handle a given amount of calls per minute per cell, as calculated by the number of users and the normal daily usage of the system. Nevertheless, the normal cell sites have approximently 22 receivers. Each receiver on a cellular system can only handle one call at a time. Therefore, caller number 23 is effectively locked out of the system until a caller hands up, or the move into another cell area were the system has an open receiver. Then, once the caller is able to place their call, they are routed to a hard line telephone system. If the local telephone system has reached a saturation point, the caller will once again hear, "All circuits are busy now; please try your call later."

During the Storm

As an 8- to 15-foot tidal surge is pushed inland by 130-plus-mph winds, the cellular and trunking sites that are at ground level, or mounted on platforms lower than the surge, will begin to flood and fail. Others will go down due to electrical outages as power and telephone lines begin to be interrupted by falling trees, lightning strikes, and transformer failure. The remaining sites that are above the encroaching flood waters and equipped with emergency generators or batteries begin to fail, because their antennas are carried off by the wind or are destroyed by objects that have become missiles in the high wind. Then towers could be destroyed by a tornado or simply collapse, due to the wind load placed upon the structure that it was not designed to handle. Within hours of the hurricane's making landfall, many of the sites will have failed. In Hurricane Andrew, a total of 51 cell Sites failed due to Damage to the Cell Site. In the remaining areas where cellular access did not go out entirely, the over load was extreme. To a disaster worker having to place and urgent request for water, food or medicine, waiting 30 minutes was out of the question. Sites still in operation will be jammed with frantic calls for assistance fron the

public and communications between different emergency service will be difficult to complete. As the strongest of the hurricane-force winds reach the main population centers, the FM radio repeaters will begin to fail for many of the same reasons. Soon, most of the repeater operations will cease, as one by one, repeaters are disabled. The only alternative left for communications is VHF-FM simplex. High frequency or HF can be used but is not readily available without a a volunteer Amateur Radio Group with access to the HF Frequencies.

During a major hurricane when winds can reach 150-plus mph, everyday items such as garbage cans, lawn furniture, home satellite antennas, and many other items will become projectiles being propelled by the high wind. Towers and antennas will be damaged by the objects and/or the high winds. No matter what the power output is of the repeater, or radios, whether or not if it is connected to an emergency generator or battery backup, once the antenna is destroyed, the system is out of operation.

The Day After

After the winds that pushed flood waters before the storm have subsided, tides begin to return to normal and the pumps begin to remove the water. Power lines will be down everywhere, and trees and parts of houses and buildings will litter the roads. Massive television and radio towers are twisted wrecks lying on the ground. Few, if any, of the cellular or 800 trunking sites are still in operation for covering an area five times the size of the city of New Orleans, when they where designed to cover a maximum of 5 square miles each. The remaining parts of the system that are still operational will be of little use. Cellular telephones connect to hard-wire telephone systems. If the lines to the site are damaged or destroyed, the site will be able to communicate only with other cellular phones within the site's coverage area.

This will also hold true for 800 and 900 trunking systems. Since the range of hand-held radios and mobiles on these frequencies is but a few miles, they become useless unless the user is luckily enough to be in an area where a repeater is still in operation. It will take days or even weeks before these major communications systems can be repaired. First, access to the site must be gained. This means the water must be pumped out, then the roads cleared. Replacement equipment and towers will need to be shipped in to replace what was destroyed. During this time, power will need to be restored. These sites might be considered low priority when compared to hospitals, evacuation shelters, and government agencies.

Many VHF-FM radio repeaters also will be out of operation for many days, if not weeks. After all, the people who so generously operate these machines that we take for granted must take care of their homes and families before they get to their repeaters. Also, most repeaters are on structures with commercial radio stations. These sites will have priority, and the radio technicians will be on the site until repairs are completed. Amateur Radio Operators have the only source of expertise outside of commercial and military radio operations and are heavily relied upon by the military in the MARS (Military Affiliate Radio System). The ability to construct and

run a radio station from scratch truly belongs to the Amateur Radio Operators.

Today

In short, when the 800- and 900-MHz trunking systems used by local government fail due to one reason or another, your Amateurs will be called upon to set up and conduct communications for the police, fire, and other emergency services until their systems are repaired. This was the case in southern Florida in the aftermath of Hurricane Andrew. A Government Sponsored use of Amateur Radio is RACES (Radio Amateur Civil Emergency Service) which is codified into Federal Regulations under the FCC. Does your Parish have a RACES Organization? Easy to form, legal in operation, just like a volunteer fire company, ready when you need it. It is during the present calm before the next hurricane season that we need to set plans in motion, so that we never will be caught unprepared when another storm strikes. By investing in Amateur Radio, we begin to be prepared. There is much work for those involved in disaster communications. The 1997 hurricane season ended a sucess for Louisiana. However, the 1998 season will be upon us soon- BE PREPARED.

"Lessons from the 1997 Colorado State University Flood: Emergency Preparedness at Colleges and Universities." Colorado Springs, Colorado: March 20, 1998.

On July 28, 1997, Colorado State University experienced a disastrous flash flood. All the books ordered for the fall semester were destroyed; 22 buildings were rendered uninhabitable; the lifework of hundreds of people was destroyed; the library suffered immense damage--more than 425,000 books were ruined; and more than $120 million in losses were incurred by CSU. Intending to promulgate the lessons of this disastaer, the organizers of this conference state, "We can anticipate some problems, and if we cannot prevent catastrophes, our preparation will help us cope during and after an emergency." For more information, contact Eve Gruntfest, Department of Geography, 1420 Austin Bluffs Parkway, P.O. Box 7150, University of Colorado, Colorado Springs, CO 80933-7150; e-mail: ecg@mail.uccs.edu; WWW: http://www.uccs.edu/~geogenvs/conference.html.

Hope folks are interested in attending!

This week's EMCOMM Bulletin:

EMC118 Interest or Committment? For release 2/9/98

Fascinating newsletters reach us, and we thank all who send them. Here are two items from the Ontario RACES Bulletin, Winter l994. The first by Robert Malaby, KC6KHA, titled "From the Desk of the Chief Radio Officer": (edited, ED.)

"I recently came across a quote in Readers Digest by Art Turock, 'There's a difference between interest and commitment. When you're interested in doing something, you do it only when circumstances permit. When you are committed to something, you accept no excuses, only results'.

Overall we have a lot of potential because of the level of commitment to the group by the unit leadership. We also have good, dedicated leadership from the City level which makes a difference when it comes to the questions which arise regarding what we can do to give better service to the City. When dedicated leadership is absent there is no focus for the group and the organization flounders for lack of purpose. We do not have this problem in organization because of the commitment that we have from the Office of Preparedness. They assist us in any way that is required to help keep us focused on the right thing -- that of providing quality and professional service to the City."

Another article in the newsletter was one by Derek Deason, KD6NRC, Training Officer, titled "Call sign vs XRAY#":

"Your Amateur call (....issued by the FCC..) must be transmitted at the end of each communication or at least every 10 minutes during a communication.... In addition, Tactical calls are used such as "Chaffey High". The purpose of the tactical call is to assist the Net Control station in knowing where operators are located and to contact them without using personal names or having to memorize Amateur calls and to lessen the amount of radio traffic.

Tactical Calls should be used at all times except when the Amateur call is required by FCC rules. An example would be:

'Xray 4 this is EOC' -- 'This is Xray 4, go ahead EOC' -- 'be advised that 1840 is enroute your location with chief 1800' -- this is Xray 4, I copy. KD6NRC clear' -- EOC KC6KHA clear'.

The above example took taken place in less than ten minutes. IF it had taken longer, then the Amateur calls would have been given at the ten minute mark and at the end of the transmission, if for instance, it ran for a total of 11 minutes. So remember Tactical calls are not meant to replace Amateur calls on the Amateur frequencies, only to facilitate communication. They should never be used to solely identify a station."

NoSpam:
>I see you are using religion now.

Dear NoSpam:

A review of my postings will show that I frequently include pertainent quotes from well-known (and not so well-known) writers and thinkers.

There was no other quotation that so closely matched what NoCode said when he accused me of only replying to selected items in his posting. NoCode is a master of that technique, and it was ironic that he would find fault if someone else did it to him!

However appropriate the quotation was, it was not meant to inject religion into the radio discussion. Had I cared to do that, I would have brought up Luke 14:28, which reads,

"And which of you desiring to build a tower, does not sit down first and count the cost, lest he be unable to finish it, and his neighbors will say......."
Well, you get the drift.

So, in the spirit of making certain that no individual readers are offended by my quoting Jesus Christ, (the Name above all others, by the way), but still wanting to get the point across that NoCode is accusing me of doing what he has been doing in almost every post, I hereby amend the signature on my post as follows:

Yrac
"Now THAT'S the pot calling the kettle 'black'."

I hope this will be more acceptable, and I extend deep apologies to the NG for my earlier sin. <grin>

Yrac
"She put a bullet
Through his hat,
But he'd had closer
shaves than that!"
----Burma Shave sign, 1955

Did you see Clinton on TV telling all the Sportsmen that he was not outto take
away our guns. Then do you know there have been attempts to outlaw
hunting ammo on the basis that it will penetrate a bullet proof vest, and to raise

the tax on ammo so as to put it out of reach ?

Yes there are, it don't do you any good to holler CQ Deee Xeee on VHF.

> there are a host of absolutely fascinating things
> that us technically-oriented folks could do ... things that YOU could end
> up benefitting from in the long run ...

Did it ever occur to you that the time you are spending in hereis detracting from
the time you need for such high level projects?

> if we were only permitted access.

Look, NO ONE is denying you access. It is your choice,just like literally thousands
of people before you.

> The impairments and propagation characteristics of HF cannot be found at
> VHF/UHF, therefore the experimentation simply cannot be done there by
> no-code techs.
>

That sounds like a cop out to me. What differences are there except forsignal
fading and noise. Open up the squelch, have someone go mobile to
a place he starts hill topping. Better yet, use your technical mind to write
a computer program that will vary the power from your rig. It seems to

me that VHF has an advantage that HF does not..Smaller antennas, much
easier to construct for experimentation.. you could have an indoor antenna
receiving signals from an outside antenna, or even a second indoor antenna.
You would need no help from another operator to carry out your experiments.
You want to trade that for HF where you need a bulky antenna?

Another advantage is that VHF radios are generally less expensive than
an HF rig.

> > So what is it that

Not true at all. It would not bother me should the FCC order me infor a full
testing of all elements including code, with the loss of my
ticket should I fail any element. I could get right back in.

The guy asked about 10-METER MOBILES...not full-fledged HF transceivers. Are you stupid or just ignorant of what was being asked for?

It's guys like you who really make ham radio look like the sorry hobby it is today. Someone asks a question, I give an appropriate answer, and one of you know-it-all HAMBOS has to make snide and insulting remarks. Typical.

Greetings Christoph !

I sincerely appreciate your learned comments. I am surprised at
myself that I didn't go to the trouble of looking up the word for
"backstay". I certainly would have recognized the problem had I done
so.

Interesting comment on the experiment. I tried that once with a
letter that I had written. I plugged into an english to spanish
translation program and then fed the result back through its spanish
to english counterpart. I was absolutely amazed at how well it did,
The one thing that got screwed up was some reference that I had made
to a golf ball. Otherwise it was almost perfect.

I hope the gentleman with the boat can avoid the DM 600 antenna - I
doubt if was any good anyway - Hi.

>From the ARRL WEB SITE, Club President's HandBook 2/10/98
>
>
>Technicians comprise more than one-third of the amateur population.

Technically inaccurate. Techs comprise ~175K of all licensed amateurs.
When combined with Tech-Plus licensees, they together accrue to ~28% of
all amateur licensees.

>It is projected
>that by the end of the decade, Technician class licensees will
>comprise more than half of the total amateur population.

Statistically doubtful. The Tech license class grows by ~800 new licensees
each month. Another ~250 licensees upgrade to a higher license class, for
a net increase of ~550 licensees. There are ~675k licensed amateurs. There
are ~175k Techs. For the Tech license to compose 50% of all licensed amateurs,
they would need to hold ~337k licensees, or a net increase of ~162k -- at
a net increase of ~550 per month, that will take ~294 months, or roughly
24 years.

Then, of course, you also have to factor in the first round of expirations
slated for 2/2001. Tech license numbers are artificially inflated right now
due to the lack of an expiration cycle on those licenses.

>This earns you a Fuddy Duddy Merit Award.

Thank you. You got an 'F'.

>Cite YOUR sources! (And please include the # of deceased licensees)

http://www.speroni.com/FCC

As to the number of deceased licensees, sorry, can't help you. Nobody
knows that number.

>Oh, by the way, did I mention that higher license class population
>was dwindling.

Yes.

Curtis...so what? It appears that you and several other
procode advocates wish to wallow in your own self proclaimed
fear that we are all misrepresenting what we say when we
flat out tell you no one amongst us wishes to end your

use of CW. Clearly it is your false fears that we can expect
to see restated over and over again rather than anyconstructive
dialog as to the true value or merits of CW as a test requirement.

>What's happening on 40 Meters, Bob? Give us an update.
>K5PF

Well, a long story, but I will try to make it short. 40 meters at that time was in the thoes of become dominated by a certain net. This net was going to dictate who and where you were going to operate. Jamming had become fierce. Drive bys (no shooting). A lawsuit was filed against one of the opposing amateur. It was thrown out of court and a countersuit was filed. The net honchos paid a settlement out of court. All this was happening about 10-15 years ago. Latest update, this net is no longer commanding any respect and the membership is next to nothing. Therefore, it is no longer the problem creator on 40 meters. That is not to say that all is well. There is still a lot of problems on 40 meters, but I am sure it is not only on the west coast, nor strictly on 40 meters. There is a general degredation of ham radio on all the bands. I don't like it, but since the FCC has mostly left the scene, the bands are falling into disrepair.

End of statement.....take care

Bob.....W5YHY

Gee Dudox/Bill/euripod/Steve, or whoever you are, I must really
be getting under your skin if you are that obsessed with me.

Or Maybe your Tiny Tenna doesn't work well enough for you
to hear anything on your radio so you have nothing better to do.
If that is the case may I suggest sticking 30 feet or so of wire out
the window and tying it off to a tree or whatever is handy. It might
make a better antenna .

Have you ever heard of someone going to location www.feedME.org,
taking the help link and emailing them a copy of what you posted then
asking them if they really want you advertising for them in a post such
as yours.

And telling them that to confirm that David and I are real persons they
can take the link to qrz.com that I gave them and look us up in the DB.

While I was at it I reminded them that by allowing one of their
subscribers
to make such a post as that might open them up for a law suit.

In case they cancel your account in the very near future
I wanted you to know why, I want credit for it.

By the way, have you quit slobbering
all over your mic when on 3950 ?

Have you visited my web site and posted your Opinion of
the 3950 Liberty Nits ?? Someone has been going there,
I had so many hits on the counter I had to zero it and start
all over again .. I got 32 hits yesterday.

You mean the true merits of dropping the code such as I see in here:

a. I don't want to spend the time learning code, I have other things that
I would like to do, such as get on HF and holler ...CQ DEEE XXXX b. No matter that
millions befor me have learned the code with
no ill effects, I am special, my time is more valuable.

c. I can't practice code at home, my wife won't let me.

Tentec Still makes one,
Uniden and Ranger are still around.

A good one is the Uniden hr2510 or 2600, very popular with the CB
crowd but still a fine 10m rig.

Carl, it is evident, even to the rocks, that this is not true. If you are going to participate in a reasoned and productive debate, the first thing you do is stick to the known facts. Your statement above violates that simple principle, so whatever follows is discredited ranting.

Have a good.

Hans

Special Bulletin 1 ARLX001
>From ARRL Headquarters
Newington CT February 10, 1998
To all radio amateurs

SB SPCL ARL ARLX001
ARLX001 AMSAT News Service editor BJ Arts, WT0N, SK

AMSAT News Service Bulletin Editor Bernard J. ''BJ''
Arts, WT0N, of Hibbing, Minnesota, died unexpectedly
on February 9, 1998. He was 37.

Arts took over the handling of the weekly AMSAT a couple of years ago, according to AMSAT-NA President Bill Tynan, W3XO.

Tynan expressed shock at Arts' untimely passing. ''He certainly was a big help to AMSAT,'' he said. ''He will be missed by all of his friends around the world.''

According to fellow club member Gregg Mihelich, AA0DX, Arts was hospitalized after complaining of flu-like symptoms and died a short time later.

Arts was an active VHFer and satellite op. A broadcaster, he had been employed at WDIO-TV in Duluth, Minnesota, and at KSTP-TV in Minneapolis, where he'd won an Emmy Award. He also worked as an announcer on WMFG radio in Hibbing.

BJ Arts was a life member of the ARRL and was president of the Midrange Amateur Radio Club. He also was an Assistant Emergency Coordinator in Northern St Louis County and a Skywarn volunteer. He was also active in Army MARS as AAR5EL.

Survivors include his mother an a sister. Services will be 11 AM February 11 at Blessed Sacrament Catholic Church in Hibbing.

1294. Callsign e-mail addresses for all interested Canadian Amateurs (FWD)

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-11 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980211121648.11808B-100000@Stratus.CAM.ORG>
Source record: 178624

Date: Wed, 04 Feb 1998 09:22:54 EST
From: va3rac@ve3kyt.#eon.on.can.na
To: rac@canada
Subject: Repeat of RAC Bulletin 98-04E

From: Ken Pulfer, VE3PU

Date: 1998 01 06

Subject: Callsign e-mail addresses for all interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an e-mail address of the form "callsign@rac.ca". This means that you will no longer have to advise all your contacts of any new e-mail address if you change your internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of e-mai addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata Ontario, and in particular the work of Rene Kahle VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS web sites that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign e-mail address, simply send a message to "alias@rac.ca" with "callsign=realaddress" in the body of the message.

For example, if my callsign were VA4KP and my real (current) email address were "ham@qsy.ca" , I would send a message to "alias@rac.ca" with the following in the body of the message: " VA4KP = ham@qsy.ca"

Any subsequent mail addressed to "VA4KP@rac.ca" would be redirected by the IGS server to "ham@qsy.ca" . Of course it goes without saying that such mail would NOT go anywhere near RAC headquarters nor be seen by RAC officials.

And of course any mail addressed directly to "ham@qsy.ca" will also be delivered as in the past without passing through the IGS server.

To obtain more details, send a message to "alias@rac.ca" with the word "help" on a single line in the body of the message.

The e-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

Body handling: HTML body converted to readable text

>What 10-meter mobile rigs are currently available?

Uniden HR2510
Uniden HR2600
RCI 2950
RCI 2970
these are the most common mobile units.

If you can find these also work

President Lincoln - overseas model - like 2510
Ranger AR3500
Radio Shack HTX-100 - SSB and CW only

Base Wise there are to many to list and each of the different mdels
all Have the same basic features...

Hope this helps
Brad KA8TOK

P.S. most of the mobiles can be easily gotten a hold of between 150 to 225
Dollars..

Cross-posting is against the charter of the rec.boats.cruising newsgroup. I understand that the original inquiry was from a non-English speaking person, and I appreciate that we should all be polite. I agree with that. However, as this subject is a radio subject and rbc is a boating newsgroup, I think I can speak for many of us here is requesting that this thread not be cross-posted to the rbc group. Thank you.

From: Anonymous <Use-Author-Address-Header@[127.1]>
Message-ID: <d59b868452d9426ae3d8cea965ab7115@anonymous.poster>
Source record: 178634
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur

The trouble with Masa's signal.

Poor old Masa. No matter how hard he tried, he just couldn't put out enough a large enough signal to penetrate the QRM. His signal was so small and weak that it could barely stand above the noise floor. He went from band to band, scanning up and down, looking for an opening in the pile-up. Masa could hear the other hear the other hams do it, but he just didn't have the signal to be able to join in himself. Then he tried some nets. The XYLs regarded his signal to be nearly imperceptible and not worthy of a any response. Even the Drakes and swans, had a bigger and stronger signal than he. Masa was so jealous of the other hams. They all S9 reports with their big beams with high front to back ratios and never bothered point them in his direction.

Masa tried a variety of modes to get his signal out. He tried it orally using SSB Modulation. That failed. He tried use digital means to get out some signal but his FSK'ing produced no response. The other packeteers were unimpressed. Masa tried to use CW, but he was completely unable to bang his key in the proper rhythmic fashion. An automatic keyer only produced intermittent dit dahs for him.

Masa had to take a long hard look at his Kenwood. It just couldn't get the job done right. Anylasis of the two power transistors revealed that his experimentation with proper neutralization techniques in the past severely damaged them. Unfortuantly, those transistors were of a proprietary type and replacing them would be impossible. His HF rig would be stuck operating QRP for life. Local VHF operations with his micro sized HT were much easier to make. To contact the police, it was just a matter of pulling off a jumper, slapping on a rubber ducky, and saying "Hi". It was always by his pocket for easy grabbing. The driver section of the transmitter stage always had a slight leakage problem.

Masa considered purchasing a tube-type linear amplifier to extend his range, but it was too expensive. In order for him to bring it up on the air he would have to follow a new operating procedure. Besides, Masa was very nervous about the idea of getting his hut rewired to accommodate the amplifier.

Stuck with a low output, Masa had to try to optimize his antenna system to work with the limited length of wire he had. High impedance levels were the biggest problem. Masa sat alone in his room for hours to find a solution to his problem. In the end Masa decided that he would only SWL. Now he spends all his time on the receiving end.

Thank you all for your help and ideas!
I went through the long process of trouble-shooting, the elimination-by-testing thing. After line-noise filters, low-pass/high-pass filters (installed at many different areas of the units in question) and so on, I finally got the problem licked! Toroids, plain and simple! Oh, and also a little bit of a ground loop phenomenon which was quickly remedied!
I wouldn't have gotten it taken care of so quickly or as efficiently were it not for your good ideas and suggestions!
Thanks again and happy radio-ing!!!
73!!
Mike in MO.

Carl,

The last time I looked at the regs, your license class had access to
at least 4 of the HF bands. What's the hold up? Get down there and
do it!

That's *your* interpretation, which many of us disagree with whole-
hearted ... read with any insight into the FCC's purpose, the
emphasis on the technical is clear to anyone who isn't biased against
it (those of you who value UPS/FedEx shipping skills more than
technical skills so you can ship your radios to the factory for
repair because you can't fix them yourself).

Excerpted from Newsline ...

****
John Johnston W3BE retires from FCC

And finally, word that one of the best known faces and voices in ham radio has retired from an illustrious career with the FCC that spanned almost three decades. On January 30th, John Johnston, W3BE, announced his retirement from the regulatory agency, effective immediately.

Johnston began his FCC career on February 14, 1972. This, when he replaced the retiring Bill Grenfell, W4GF, as Chief of the Rules and Legal Branch of the Amateur and Citizens Radio Division serving under then Division Chief A. Prose Walker, W4BW.
****

At last a major barrier to amateur progress has stepped aside ... hopefully, his successor will be more progressive, less Luddite, and not in the pocket of the fogies in Oldington ...

Horse-puckey, Curtis ... many of us have stated repeatedly that we would NOT seek NOR support any attempt to ban the voluntary use of Morse on ANY amateur frequency ... there is no need to ... all we want is access to HF without the More hazing ritual.

I and others have even proposed to "compensate" the Morse aficionados by supporting the establishment of limited "Morse only" sub-bands where you would NEVER have to compete for the use of the spectrum with more robust modes ...

These continuing "hidden agenda/next step" insinuations/accusations are really quite disingenuous. I've come to expect lies and dishonest from MD, but I would hope that you would be more of a "straight shooter" even if we agree on the issues.

In some sense we ARE "doing it for the children" ... in hopes of
ensuring the future survival of ham radio against ever-increasing
demands for spectrum below 1 GHz ... the FCC just took another
batch of UHF TV channels (for public safety radio) ... and the
broadcasters are arguably THE most powerful lobbying/political
influence in the nation ... we are a piss ant next to them as
far as mustering political power to keep valuable spectrum.

Unless we start "paying our dues" according to Part 97.1, we will
surely not survive very far into the coming century ...

I want my grandchildren to be able to become hams, if they are
interested.

HF.

You have bought into MD's bogus mindset that we care about operating SSB
and CW ... I would probably use SSB only rarely (and Morse never, of course).

> So why would these technical minds care about HF, what can they do of
> a technical nature on HF that they can't do on VHF/UHF ?

There is a WORLD of difference in the channel impairments between HF and
the VHF/UHF bands ... there are a host of absolutely fascinating things
that us technically-oriented folks could do ... things that YOU could end
up benefitting from in the long run ... if we were only permitted access.
The impairments and propagation characteristics of HF cannot be found at
VHF/UHF, therefore the experimentation simply cannot be done there by
no-code techs.

> So what is it that
> is keeping these technical minds off the VHF/UHF bands right now, one can

From the ARRL WEB SITE, Club President's HandBook 2/10/98

The Technician licensee is now the major force to be reckoned with
when it comes to identifying club programs/services/benefits and
developing your club's membership. Technicians comprise more than
one-third of the amateur population.They are by far the single largest
group of licensees, with Generals a distant second.It is projected
that by the end of the decade, Technician class licensees will
comprise more than half of the total amateur population.

This earns you a Fuddy Duddy Merit Award.

Cite YOUR sources! (And please include the # of deceased licensees)

I will be patient.

Oh, by the way, did I mention that higher license class population
was dwindling. (For KH6Hurtz only-presumably the population is
dwindling with respect to the lower class population, not the number
of a grey hairs on ...well you know)

> cram morse code down my throat? It makes not a whit of sense.

The reality is that the ONLY "CW ONLY" sub-bands are small slivers at
the bottom of 6m and 2m ... ALL of the "CW bands" in the HF bands are
SHARED with other "digital modes" ... the Morse folks actually want to
impair the experimentation with (and proliferation of) more robust,
efficient, advanced digital modes in "their" sub-bands for fear of
being "crowded out."

NIMBY is the operative term ...

Are you near power lines? Could be some sort of "carrier
current" transmission on the power lines ...

Could be a bad "dimmer switch" or something like that, too.

Good luck in finding the source ...

>where any other person can post an article??

Hi Jim,
It's stated very clearly in the rec.radio.amateur charter, which
you were supposed to have read prior to your first post (might not be
your fault, since the charter hasn't been posted in quite a
while). The charter pretty much states what topics go where.
Once the vote is taken and users such as yourself accept a
charter's contents, it become the law of the land that we're all
supposed to abide by. Violate it and you risk being flamed; continued
violations sometimes result in complaints forwarded to your ISP ('course,
I believe you're your own ISP!).

To sum up, .policy was created years ago to take the code debate
off of .misc and the other groups. Everytime one of us (including
myself) makes mention of code/nocode, we've violated the charter.
At least I'm doing my part to clear up this plague by appending
"Followup-to: rec.radio.amateur.policy"
in the headers of my code comments; this causes followups to my
comments to appear only on .policy, and not on .misc.

You can go into just about any NG, professional or recreational, and view debates, arguments, flaming. We're no different.

I suggest you try one of our specialty groups, such as .antenna or .homebrew, if it gets too hot for you here.

How the outside world views this NG really doesn't matter , since Internet, and in particular, Usenet, is not ham radio. Their best view of us would be from their receiver while tuned to any of the HF CW segments. There they'd see us as gentlemen (and ladies).

Is anybody happier because you passed his way?
Does anyone remember that you spoke to him today?
The day is almost over, and its toiling time is through;
Is there anyone to utter now a kindly word of you?

Can you say tonight, in parting with the day that's slipping fast,
That you helped a single brother of the many that you passed?
Is a single heart rejoicing over what you did or said?
Does the man whose hopes were fading, now with courage look ahead?

Did you waste the day, or lose it? Was it well or sorely spent?
Did you leave a trail of kindness, or a scar of discontent?
As you close your eyes in slumber, do you think that God will say,
"You have earned one more tomorrow by the work you did today"?

73, and good night.

Mike,

I read with amusement at what your opinion of Wayne Green is. I, too, am amazed at his ramblings. I have not following him for a very long time, but the last time was about 6 or 7 years ago. I wrote to him because I considered him a "maverick" in the ham magazine world. He is, in fact. However, I was after him to do an editorial on the problems on 40 meters out on the west coast. I figured that him being this maverick, he would jump on it in an instant in that the ARRL had failed again. Well, he thought my suggestions and the proof that I had was meant to bring down amateur radio and would not touch it. After all, ham radio is his livelyhood and I can understand that. All I wanted was some sort of forum to look into the problem. He declined to face the issues just as QSTdeclines.

So much for that.....it is good to see that other hams are aware of his highness and his problems of self grandeur.

Bob.....W5YHY

1335. Ham License Renewal

Tnx for the newsgroup responses to my inquiry. I followed up on the suggestions & submitted a request electonically to the FCC at web site: http://www.fcc.gov/wtb/electcom.html. About one week later the FCC sent me a renewed Ham Radio Operator's License w/a 10 year expiration date of 1-27-08. It is a nice certificate suitable for framing. This electronic form is "user friendly". You will know that your request has been forwarded to the FCC when you receive a "submission number" at the end of this Form #900.
Tnx from KF7IL-----Bill.

First of all, Welcome aboard!

I don't want to discourage you from buying one of those neat little gadgets, but since you have a computer, may I suggest using a computer program? my favorite is Supermorse, and it is available as shareware at my website, http://members.aol.com/RCrusoe/ab5vh.index.html along with a new ham FAQ file that is still far from complete. The program can be used to generate code for recording to a casette tape, either the regular size or the miniature ones for the micro-casette players. Just record a new tape avery day or two to prevent memorization of the content.

The program. like many others, can also be used to send CW on the air with your rig, and with a somewhat more complex interface, can even be used for recieving, as long as the recieved code is properly timed and spaced. The program can also give you a sample Morse Code exam similar to the one you will take at the test center.

Just an idea...

Yeah... I'd like that citation as well.. can't imagine a case invloving
amateur radio that would have been able to make it all the way to the
supreme court and have a decision made....

Ok, I'll bite. Doesn't any of you emergency oriented Hi Speed
operators have a back up generator? I mean back in the 40-50s we had
one ready to go at the first sign of problems. Maybe because we had no
7/11 to run to. BTW, must be some puny emergency that would suggest a
closed door between you and some batteries needed to save the day would
stop you.

Get Real

Careful Cecil, you sure you want to be delving into the black, mystic art of artful OOKing in one of these black hole emergencys? Some day a real emergency will come along and a lot of people will be stepping all over themselves and everyone else trying to prove an unnessessary mode will still do the trick when someone on CB has already handled the problem. CB, (11 m) is HF. Many are installed in cars and trucks and boats and airplanes and skate boards and one guy I know has one on his Saddle. They have 12V supply and relative to VHF, they have talk power. I'm sure that will upset some here but truth like frequency is where you find it.

Congratulations on your new business!

Statistics show that businesses in general increase their business by at least 40% by accepting all major credit cards. If you are in the mail order or Internet business, you can expect almost all your sales to be on credit cards or checks by fax or phone.

First National Bankcard is one of the oldest most trusted Bankcard Company in the United States. All of our banks are FDIC insured. All proceeds from credit card sales are transferred into your current business bank account.

We can provide you with the lowest discount rate in the industry, only 1.45% for retail businesses and 2.3% for mail order and Internet businesses. We are currently waving our application and set up fee with the lease or purchase of credit card terminals or software. We will process your application for all the major credit cards including Visa, Mastercard, American Express and Discover. Our normal processing time is only 48 hours.

If you are in business, you need to accept all the major credit cards. Call or email us to receive your application. We can be reached at 1 800 318-8244. Our email address is tgoan@cts.com and our web address is http://www.1stbankcard.com.

The fact that you include a line in the documentation saying "This information is NOT free" and then post the cost in Canadian dollars makes it a commercial endeavor. It's amazing you would post such garbage and not even bother to run a spell checker or have someone proof read it. I love the part where you claim it's "professionally done" haw haw, keep 'em comming Masa your an endless source of amusement.

Isn't it great how some hams are generally quick to comment on illegal activity in the CB band, yet ignore the activities that occur nightly on 75 meters?

In a sense it's strange. For example, someone will ask about a linear amplfier for a CB radio, and they'll interject their two cents with how it's illegal to use a linear amp on CB. Yet, I'll bet they don't chase down speeding drivers on the freeway and confront them with the fact that they were speeding.

Yes, but then he'd be breaking the law himself if he were to do that. The freebanders who operate between 27.405 Mhz (channel 40) and 28 Mhz would be outside of where American amateurs can operate legally. And then there are the freebanders who venture above 28 Mhz into the 10 meter amateur band. In these portions, American amateurs can only use CW legally, so to tell them to get off the air in anything other than CW would be illegal.

It's sort of a Catch-22 for those who are quick to quote the law, and yet are quick to say that they'll run any freebanders off the ham bands. Legally, they're limited as to what they can do.

1361. Field Day power supply-suggestions?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-12 00:00:00 UTC
From: medintz@idir.net
Message-ID: <34e2c325.16747950@nntp.idir.net>
Source record: 178442

-----BEGIN PGP SIGNED MESSAGE-----

I'm trying to put together my Field Day station for this summer, and
I need some sort of powerstation.

I don't know the exact model of Xcvr that I'll be using, but I
expect it to be one of the common all-HF-bands all-mode 100W models
drawing 12VDC, and that's the only load that the supply will need to
power.

The supply itself: Must be able to keep this transceiver running
(maybe 90/10 Receive/Transmit duty cycle) as long as is possible, and

must require as little space as is possible. (If I could keep the
entire thing inside one of those stacking plastic milk crates, that
would make things a _lot_ easier.

I'd strongly prefer to homebrew rather than buy.

So...anybody have any ideas? Should I just buy a couple of
deep-cycle batteries or is there a better option?

Replies either here or in email, whichever's yer pleasure.

1363. looking for information on satellite dish antennas

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-12 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34e24dfe.8562445@news.sprynet.com>
Source record: 178444

hi

I realise this question does not concern amateur radio but (a) I looked through some of the satellite newsgroup titles and couldn't find one that, I thought, would specifically answer my question (b) I know that the amateur community may be able to give me some unbiased advice.

For the past serval months, possibly even longer, I have been considering putting up a satellite dish. When the 18 inch dishes began to come on the market I got even more interested.

Problem: There is a rather large maple tree between the house and the satellites.

Question: Can the signals from those satellites get through a maple tree's leaves, branches etc?

Larry ve3fxq

1364. Re: ICOM - 706 vs. Mk-II --- Opinions?

Newsgroup: rec.radio.amateur.misc

Paul Janzen <matrix@vzinet.com> writes:

> I want to get the MK-II for my dads birthday. But he will want to use it
> mobile but he can only use 20 inch or less antenna.

Please clarify this requirement. Does this really mean that the top
of his car is 20 inches below the entrance to the garage? Or does
this mean that there is some legal or spousal limit requiring an
actual 20 inch antenna? :-)

For HF antennas, bigger is better. Most of us HF-ers do park our
vehicls in garages. There are three general forms of solutions to the
general problem you describe:

1) Remove the tall HF antenna from the car before driving into the
garage. I personally use this one.

2) Use a short antenna which supports a fold-down feature, and fold down
the antenna before driving into the garage. Comet makes two
different HF fold-down antennas which support multiple HF bands.
They are pretty short (too short for good HF radiation, in my
personal opinion) but do work on their specified HF bands.

3) Use a medium length antenna mounted on the trunk so that the top of
the erect antenna is low enough to permit the vehicle drive into
the garage without touching the antenna. Depending on what kind of
car your father drives and where/how he mounts the antenna on the
trunk or on the bumper, this technique may be possible. Again, see
the several Comet HF fold-over antennas, the assorted coil wrapped
Valor (TM) and HamStick (TM) mono-banders mounted to the bumper,
the Hustler antenna line mounted to the bumper, assorted short
BugCatcher (TM) mounted to the bumper, and possibly the shorter
screwdriver stule antennas mounted to the bumper.

> Which I understand
> is a problem with 1mhz - 50mhz. I was hopping the at180 antenna tuner
> will allow use of a small antenna but have not been able to find out.

Nope. The AT-180 only handles a maximum SWR of 3:1, which is an
extremely limited range for an automatic antenna tuner. The AT-180
will tune a 9' CB (CB bands are about 11 m) whip to the 10 m and 12 m
bands, but nothing else.

The ICOM AT-H2 and AT-H3 are tuners specifically designed to
automaticaly tune a whip mounted on a vehicle's bumper. ICOM sells an
excellent whip which pairs with one of the two tuners. The

tuner/antenna pair sells for about $800 as I recall, which I personally thought was a pretty steep price. I ended up buying a screwdriver style antenna for less than $200, which has the added benefit of not requiring a tuner at all, while permitting operation on all HF bands.

My personal recommendation is a screwdriver style antenna mouned to the bumer, with a Hustler brand quick disconnect on the whip. This permits the lower portion of the antenna to be securely mounted, and it takes 5 seconds to pop the top portion of the whip off the antenna to permit driving into the garage.

I am looking for one of the computer programs that helps get someone ready for the various written tests for Novice and Technician. If anyone has or knows about one of these test preparation programs, please e-mail me about it. Thanks.

How ya doin NJ Steve?

You may be correct in your above premise, however in order to assure the undrstanding of both parties, I am forwarding my most forward thinking proposal todate Re: Use of OOK and crossing of borders of other Countrys.

The proposal will require Language testing for all users of OOK mode which can not be guaranteed to not cross a border of another country. This testing will test for all such likley senarios and no transmissions will be allowed pending such testing and review to determine completeness of possible border crossing and languages in use therein.

My brothers in radio, we must always aspire to assure our sincere and dedicated emergency proficiency in order to save the universe while preserving our first love "Morse Code" and the testing of same. While not requiring your signatures for support of this proposal, I would however appreciate your approval in this gratifying and worthwhile endeavor. Remember, it is the only way to assure saving of the world.

Why not whats good for them is good for us? Have not some of them
reduced the code test requirement to 5wpm for HF access? I suggest that
may be a pretty good start and total elimination of Morse testing be the
next logical step in the process.

See what can happen when great minds come togeather Steve?

Paul, an antenna that short on the HF bands will have virtually no
efficiency, IE it won't radiate a signal worth spit. About the shortest
thing that works well enough to bother would be at least 60 inches
tall, and something in the 8 foot to 13 foot range will work *much*
better. HF mobile (other than 10m) requires large antennas. It's
the nature of the beast.

Absolutly right Mr CW.

The old Ham believed that power and 100% modulation was everything.
Those Texas Tons and California KWs still make me wonder. Some weren't
to bright and believed you got 100% for every gallon you had and for
some the came to about 700% modulation, and they thought it _was_ fixed.
You didn't need a recvr half the time to pick them up and if you had a
filling, it hurt.

Sounds reasonable to me Doc,

But could you tell me if any Ham has had his (damn, that almost looked like Morse) antenna ripped off his home? Just curious, as Hams "always use Call Signs and never use Handles" and Hams do sometimes get a tad rowdy on the air. You may have something but if it isn't working on the Hams it won't for CBrs either. BTW, in most circles, CBrs having Handles also used Names and were known to everyone in the area. There were those who never advertized their identity and were hell raisers on the air just to be raising hell but most were known and soon persueded to knock it off.

>Of course, no amount of cajoling will convince this person to turn down
>her *&^%$@! powered microphone.

My favorite (but not recommended) solution for this went this way:

A friend had a neighbor who's CB was the bane of the neighborhood. Overpowered,
overmodulted, interfering, etc. The neighborhood became frustrated in its efforts
to have the man stop the problems caused by his CB.

Finally, in frustration, a ham in the neighborhood waited until the next time
the CBer was on the air, turned his yagi toward the CBer's house, tuned his
HF rig to the CBer's freq, fired up his 10-meter linear amp, switched to CW and
put a book on the key for a good 30 seconds.

A few minutes later there was a knock on the door. It seems that the CBer's rig
had somehow started smoking and quit and could he please take a look at it and
see if he might be able to fix it.

Said sorry, but no, and closed the door.

The neighborhood was never bothered by a CB again.

Oh, CW works quite nicely. Calling a CQ to begin a QSO on top of
the illegals is a very effective method of purging them from 10m.
(The FCC has deemed this technique as being legal.)

(This is a policy matter, so fol-ups directed to .policy.)

It took a bit for me to dig this out, me being an foggy oldtimer
(at 38, and qualified to be a QCWA member), sometimes I find that my
memory is not as good as it once was.

The following is from a handout from the Department of Communications
from about 1971, though it has no date on it. It was right next to my
certificate of proficiency (ie the indicator that I passed the test)
issued in June of 1972. The handout was what you'd get if you wrote the
DOC asking for information about amateur radio:

"49 (1) No license shall be issued to any person in respect of a station
performing an Amateur Experimental Service unless he is a holder of one of
the following certificates:
a) First Class Radio Operator's Certificate
b) Second Class Radio Operator's Certificate
c) Special Radio Operator's Certificate
d) Advanced Amateur Radio Operator's Certificate or
e) Amateur Radio Operator's Certificate

(2) Notwithstanding subsection (1), the Minister may grant a license
to a person who is not the holder of an operator's certificate if such a
person is otherwise qualified and is situated at a point remote from an
examination centre and has submitted to the Minister an affidavit
establishing that to the best of that person's belief he can qualify for
an Amateur Radio Operator's Certificate.
(3) A license issued in accordance with subsection (2) is subject to
cancellation if the licensee fails to obtain an operator's certificate,
(a) when first called upon to take examination for such
certificate by the Department; or
(b) within one year from the date of issue of the license."

In a similar handout, dated 1986 (and somewhere in between, it changed from the Amateur Experimental Service to simply the Amateur Service"

" 48. To qualify as an operator of an amateur station, a person shall hold
a)a radio operator's
[different list of certificates deleted]
d) an authorization issued by the Minister pursuant to section 14 of the General Radio Regulations, part 1"

I've never had a full set of the regulations, so I can't look that up, but it might be a similar exemption.

The most recent handout that I have, issued in 1990, shortly after the new licensing structure went into effect, has a similar section of what certificates will allow you to have a station license, but there's no sign of an exemption.

So yes, such an exemption did exist, but it seems like it no longer does.

Source record: 178459

Upcoming Gordon West Radio School Classes
==========

Gordon West, renowned author, teacher, speaker, and amateur radio operator, will be hosting a Radio School licensing and upgrading class in Orange County, California (for other dates and locations, see the end of each class description).

Two classes will be held at Fry's Electronics, 3370 East La Palma, Anaheim, CA 92805, one for the No-Code Technician License, and one specifically for General Morse Code (13wpm):

Weekend Technician No-Code Class

Date: Friday 6th, Saturday 7th & Sunday 8th March

Everything you need to get your Technician No-Code FCC amateur radio license will be covered in this exciting two-and-a-half *full* days of class! Class starts on the evening of Friday 6th March, and continues on both Saturday and Sunday.

The exam questions are taken from the FCC Novice Element 2, and Technician Element 3A question pools, all of which are covered in the exclusive Gordon West Technician No-Code Plus text book. All questions are multiple choice, exactly from the book. Use the pre-study materials to help make passing the exam on Sunday afternoon even easier! Your license could be granted in just 72 hours.

Students receive the home study package, containing the Gordon West Technician No-Code Plus text book, theory cassettes and computer program. Included in the class fee are beverages, lunch (Saturday and Sunday), live equipment demonstrations and free workshops after class on Saturday.

Other Technician No-Code classes:
Sunnyvale, CA: May 29, 30 & 31
Huntington Beach, CA: June 19 & 20 (Two days for kids)
San Fernando Valley, CA: June 26, 27 & 28
Alameda Mariners Class: July 24, 25 & 26

For more information, or to register for the class, please call Suzy West at (714) 549-5000.

Weekend General Morse Code Class

Date: Saturday 7th & Sunday 8th March

Are you a terminal Tech? Have you tried to pass the General class code test before, on your own? Have you "hit the wall" at 10 wpm, and need help over the plateau? The General class code weekend course is your answer to the Technician class blues. You will pass the General Class Code and Theory tests, in class, Sunday afternoon, while your spouse and friends pass the No-Code Technician exam in the next room!

Build your code speed, now, to 7-8 wpm with Gordon West's code tapes. This is the speed ticket for entry. We'll do the rest in class together, starting the morning of Saturday March 7th, 1998.

The exciting and entertaining course lasts two *full* days, and includes beverages and lunches, a Saturday night "Operating Session" with Gordon West and the No-Code Technician students, the Gordon West General Class Theory text book, and the 7-15 wpm code cassettes. If you have never copied code before, be sure to ask for the 0-5 wpm tapes too. Several General Class theory review sessions will be held throughout the weekend.

The only prerequisite for this class, is that you be able to copy 8 wpm by the start of class on Saturday.

Other General Code weekend classes:
Fry's Sunnyvale store: May 30 & 31
Fry's Woodland Hills store: June 27 & 28
Fry's Oregon store: August 1 & 2
Fry's Dallas, Texas store: Nov 7 & 8

For more information, or to register for the class, please call Suzy West at (714) 549-5000.

We hope you can make it to class.

>all licensed hams. see below:

You are correct Bill. Unfortunately I copied my percentage from the wrong column -- 27% is appx. the number of hams as a % of the whole who are tech-class licenses, not tech and tech-plus combined.

However, the rest of your statistics, provided by Fred Maia, are statistically inaccurate, because they do not (according to e-mail Maia personally sent to me) strip out the expired licensees. Statistics at http://www.speroni.com/FCC show the true number of unexpired licensees, and of these, there was a growth in *all* license classes last year.

In my hand's on opinion, the Uniden is much better than the TenTec, and cheaper too! (If you're looking for single band operation). In fact, the Radio Shack unit is better too.

I like to buy American, but was not happy with the TenTec receiver in mobile operation... plus the internal mechanical quality isn't up to my standards, quite.

No. A better solution would be to force non Morse tested operators to
remove any access for a Key of any kind to their Transmitters and be
allowed on any freq not designated as Morse only. We definetly don't
want those guys fooling around with something not proven to the rest of
Hamdom. Also we should force them to use a distinct non standard Call.
Much like a vanity Call now. That will teach them whats what.

<More snip>

Ho hum, yawn, another "blew the front end right outta their radio"
story.
Darn, used to hate having to rebuild the front end of my mobile CB rig
every time I went to the Dayton Hamfest. That pesky VOA transmitter site
north of Cincy, you know. Had to be careful to turn the car radio off
too, else WLW (50K watt 700 AM) would get me.

Course, too, there was the CBer down the street who used to trip the
local utility's OCBs when he "keyed-down" with his big amp. Heard they
told him not to run the amp until after midnight so he wouldn't cause an
overload on their system.

Yeah, right, and a hundred other tall tales....

C'mon guys, didn't any of that theory you learned (memorized?) to get
your license stick with you?

Ralph

Actually, it does. It also has a killfile. See below.

>....nor do we have to listen to self-appointed moderators.

That is certainly your privilege. It's also my privilege to remind
people, politely, that it's very poor netiquette to post CW arguments
in other groups when there's a specific group available to use for
that purpose.

I've decided to do my part to help make rram a bit more readable.
Those who read my reminders in the spirit that they are intended will
be more careful in the future. Those who flame me for it will be
added to my killfile, and, hopefully, to the killfiles of others who
share my opinion on this. Either way, my reading of rram will soon
become more pleasant. It's a win/win situation. In fact, the
situation seems to have gotten better already, thanks to my comments
and those of a few others who are fed up with this never-ending and
pointless wrangling over CW test requirements in this newsgroup and
rec.radio.shortwave.

P.S. So far, the only flames I've seen have been quoted by others,
since the flamers are already in my killfile.

Well, that's not entirely true. When someone repeatedly points out to you that you're violating the charter (which users such as yourself helped to write, and then voted it into practice), you then have been made aware that your actions are contrary to the group's purpose, and open yourself to complaints forwarded to say, abuse@neo.lrun.com. Anarcy can render a NG completely unreadable. Is that what you wish to happen here?

I do. I have a big heavy cow catcher on the front of my 3/4 Ton 4x4 Diesel powered Ford Pick Up, I ram them and push them off into the ditch. Well, those little wimpy cars anyway, I cut those big old trucks some slack.

A lot of work is being done behind the scene to clean up the few dozen
bad operators on 80m. But keep in mind they only represent a fraction
of a percent of all US ham operators.

Want to listen to good ops? Tune to the lower end of 80 and 40m in the
evening.

And when one comes along, you so very conveniently ignore it and hope no one else notices.
Try Kevin WB5RUE--he posted here not long ago, his experience where he was in the process of rescuing a 16 year old girl stranded in a flood when they were both swept away by the water, and grabbed a tree downstream a few hundred yards. His 2meter HT, still in his possesion, but with waterlogged microphone and speaker, became his sole communications mode by using the HT's touchtone pad to send CW to rescuers, who located and rescued him and the girl shortly before their tree was swept away.
Now that's not too much of a strech from the phone booth scenario, is it?
Even more urgent, but that's the way circumstances happen in those events. The only thing that is really predictable is the unpredictability. The No-Code movement finds it very much in line with their Agenda to ignore all these very real facts.

And who says the "Compelling Reason" must be to 'keep' the requirement? It just may happen that the "Compelling reason" sought and required will be adequate and compelling resaon to *remove* the code requirement! There are very compelling reasons to keep it--unless one is a no-coder, of course.

Sorry about tha Lumpy. The key word I saw in what you posted was Colorado. I have seen too many posts in other places where someone from Colorado was lumping all Deer Hunters from Texas together and bad mouthing us. That is one reason the last time I went out of state on a hunt I spent my money in New Mexico.

It was an instant reflex. If you need any help in bashing Code Sapper let me know.

Why doesn't Gordie teach code the same way some people have indicated they think the
Navy taught me. They think the Navy drilled a hole in my head and poured it in. He could
have them up to 24 WPM solid copy that way.

Of course he would need to buy some dits and dahs from Hans.
That might be cost prohitive.

Curtis

You seem to be a little unsure here my friend, and because you are I
will suggest you take care in calling someone 'boy'. In fact, I suggest
you consider not doing that in any event in the future. It's only a
suggestion but even someone from your part of the country can understand
the stupidity in using that term in that manner.

He is what he is and you may never understand just what that is, and if
you did I doubt you would know what to do with it, but since I don't
know you I will give you the benifit of the doubt this time. The debate
here is about Code Testing but some of you want to make it about the
people for or against it. Real bad move. There are points on both
sides but you loose points when you insist on attacking others
personally.

- 10 pts for you

Rush Limbaugh was riding through a plush country side in his black chauffeured limousine. All of a sudden a pig darted out in front of the limo and was instantly killed. Mr. Limbaugh felt really bad and instructed his driver to head up to the closest farm house, find out if they owned the pig and offer to pay for damages.

They soon arrived at front of the farm house and the chauffeur went to the front door. He was escorted inside by the farmer and was gone for over 2 hours.

When he reappeared his clothes were in disarray, he was carrying a brown paper bag, and had the biggest smile on his face that Rush had every seen. Rush demanded to know where the chauffeur had been and what had taken him so long.

The chauffeur reported that he had went to the door, just as instructed, and had told the farmer and his wife what had happened. They invited him in, prepared a fine steak with all the fixins' for him.

Then they took him upstairs to meet their 24 year old daughter who was a finalist in the Miss America Pageant. They left him with the daughter to have wild sex for an hour.

When he came back downstairs the farmer's wife had baked chocolate chip cookies and had given him the brown bag full of fresh hot cookies, then they sent him on his way.

"Wow!" exclaimed Rush. "What the hell did you tell them?"

"Well..." replied the chauffeur, sheepishly. "I just told them that I was Rush Limbaugh's chauffeur and I had just killed the pig."

With apologies to dittoheads,

WB5BNQ

<<SNIP>>

Ahhhh... you must mean WESCARS (WestCoastAmateurRadioService) net around 7250. This was jam city in the 60's too. Nice big mess, but still provided a good service while you were mobiling. Repeaters have negated the need for it somewhat, in past couple decades, but its still nice for long haul communications during the day.

I'd suggest mounting in a van, rather than a Jeep. *Much* more room available, and you won't bump your head. Consider placing curtains over the windows, though, so some conservative passerby doesn't call the police!

...
>Could most of you support either of these??

No. The code speeds were already "lowered" when the option
of not having to provide one-minute of error-free copy was
enacted. We've read testimony from VEs here stating examinees
were passing the 13wpm element who couldn't provide perfect
copy at 8wpm.

Let's continue this on .policy, where it belongs.

KH6HZ:
>Technically inaccurate. Techs comprise ~175K of all licensed amateurs.
>When combined with Tech-Plus licensees, they together accrue to ~28% of all amateur
licensees.

THIS IS A BALD FACED LIE!

Obviously, you were so upset by the facts that you forgot how to add.

Whats the frequency Kenneth?

FROM http://www.speroni.com/FCC (KH6HZ 's source)

Total ARS :676K 1/98
Techs: 181K 1/98
Tech+ 138K 1/98

Lets see 181+138=319

Hmmm 319/676 = .47 or 47%

That's because there is no decline in CB Radio. In fact, CB is currently experiencing a growth revival which is expected to escalate as the solar cycle begins to intensify. Soon, worldwide communications will again be possible on 27Mhz and we will see a rejuvenated interest in CB, especially on the Freeband.

On the other hand, interest in ham radio IS declining rapidly in all classes of license except for the no-code Technician.

you MR CBRAMBO, prove my case. IF you've had one smart or witty comment on this ng, i missed it. you remind me of the reason i threw out my c.b. 4 years ago and got my ham lic.but as with the nocode plauge of ham, even an idiot like you can get his ticket. but first you must throw out your copper catalog, get a job (other than pumping gas) and learn a few terms like ERP,RMS,SWR. oh yes, you also have to add numbers in your head,somtimes big ones with 5 or 6 zeros.
good luck. i know you can do it.
BY the way, AOL is increasing the monthly charge $2.00. better start taking out the trash so mom will raise your allowance.

See the ARRL homepage at http://www.arrl.org.

One of your most valuable resources will be face-to-face encounters and demonstrations with hams in your area. See if there is a ham radio club in your area.

Not all towns have a ham radio shop anymore... For a lot of us, Radio Shack is the closest thing to a nearby walk-in retail store. Consequently, a lot of hams pass through the door even though RS stocks very little in the way of ham stuff. Also, the clerks or at least te manager is likely to know about license testing dates and sites in your area, and contacts for the local ham club.

RS stocks "Now You're Talking!", the ARRL's study guide for the Novice and Technician class licenses. There is a lot of info on ham radio in gneral, getting started, setting up your first station, etc.

You will have a decision to make right of the bat... You can either study Morse Code and take the 5 word/minute code test along with The Novice written exam and have priveleges on HF where most of the opportunities for Global communications exist, or you can take the Novice and Technician written elements and have priveleges on VHF and UHF without learning the code. (You could also take both writtens AND the code, and have all the priveleges of both licenses) To upgrade to higher classes of license you will have to learn the code. Whatever you do, don't listen to our rantings and ravings over Morse Code on these ngs... things get a bit emotional sometimes because most of us have strong feelings one way or the other. Read the study guide and base your decision on what looks right for you.

If you do decide to get a HF license, check out my site
http://members.aol.com/RCrusoe/ab5vh.index.html
Download the FAQ file and the SUPERMORSE program. This is a very effective program for learning the code, and has a variety of uses and features. It is shareware, and the registration is pretty reasonable. The program is not crippled in any way, and the only nags are the opening screen and a short goodbye on exit. The guy really worked hhis butt off on this program and deserves your support if you use it.

Message-ID: <34e28441.16599368@news.northstate.net>
Source record: 178546

I am sure that I will get frosted (burned) badly for this but I have to put in my opinion! I have been an amateur radio operator for 23 years. I got my license whe I was 15 and have proudly maintained it for this time. During that time I have watched amateur radio go both up and down. I personally find the dropping of the CW testing objectionable. It will allow the CBer wanna-be hams but too lazy to really work for the privledge types onto a set of radio frequencies that have been fought for continously. If at this point anyone reading this feels guilty, then blame yourselves due to the fact that I might have hit too close to the truth you refuse to admit to yourself!!
I am also ACTIVELY working with 5 counties in my state in recruting NEW amateurs. approximately 50 to 60 % of these new amateur radio operators are under the age of 18. these numbers are growing rapidly in my area as we (the amateur radio operators) go into the schools in our area and actually have permission form these same school systems to use their facilities to hold classes for the young people. We teach theory and YES....CW!! OF this percentage above, 20% fall in love with CW and go from no code tech to Extra within a year.
Finally, I left CB due to many facts. The main one was the people on the air who would cut others to pieces in the blink of an eye. So I finally come up to using the news groups looking for Amateur Radio groups and I find this one among many others. I download all the message bodies and to my shock....I find people here who claim to be amateurs but FLAME others like the CBers I left far behind. From what I have gathered from reading some of these mean-spirited messages, I can only conclude that this group is made up of 75% Amateur radio operators and 25% CBers who are here just to cause trouble and start arguements. Of that 25% I am betting that almost all of them are under the age of 25. (If the shoe fits then again...If at this point anyone reading this feels guilty, then blame yourselves due to the fact that I might have hit too close to the truth you refuse to admit to yourself!!
I am sincerely glad you are not within my area. If you act this way on the air, then I am not surprised you are not making many contacts. I certainly would not talk to you very long and neither would any other amateurs in my area.
You now have two choices. After reading this you can publically flame me and really show yourself to be the mean-spirited, juvenile-minded person you appear to be...(better to keep ones mouth shut and let people think you a fool, than to open your mouth and prove it.... or you can remember that amateur radio is a large number of different people, with differing opinions, who have a common love of radio and ALWAYS try to uphold the dignity and honor of our hobby and get along as well as possible. Boiled down....Please stop flaming

us and each other as if a NON-amateur radio person came here and saw this type of behavior, neither they nor I would NEVER WANT to associate with Amateur radio, let alone become one!!

Disclaimer:
This has been an editorial statement from me alone and is NOT the

Not real sure why my name was included in this post.
Neither of the two comments were mine. Surely just
a simple oversite on Tim's part. What I did post
was something about Masa's Canadian or Japanese
license status vs his comments about US licenses.

BTW Tim. If the RAC does go for your proposal, be sure
to let Masa know so he can update his -

"Complete On Line, Non Proof Read,
Nearly Impossible to Understand Guide
to Amateur Radio Licensing"

I'd hate to see inaccurate info coming from
the Cutie site...;-]

I'm sure the Canadian authorities are proud to
have Masa helping them out with his on line guide.
Probably saves them a lot of time and money as they
can just refer questions to the Cutie site.

Curtis - Tongue in cheek humor? You sure don't seem to
have a handle on it. Of course I was commenting on Masa's
insistance that 2m was the only thing that would work when
storms brought the power down.

Yet true to form, Masa answers in that typical Cutie way
of his. See below -

Masa wrote:
...begin quote...
actually phone patch was available to order some pizza (or anything
else what one needed) during the emergency and many people did use the
phone patch.
...end quote...

Guess the storm wasn't that bad after all...

The Benny Hill show in the US was the variety like UK version editted to
a "Laugh In" pace. The two show versions were quite different. FOr
those in the UK, it turned Benny Hill into Kenny Everett.

1456. The Wonderful World of Intermod

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-12 00:00:00 UTC
From: Brian <madscanner@hotmail.com>
Message-ID: <34E2E632.4AB8@hotmail.com>
Source record: 178564

Hello all.

I'm hoping someone could give me a hand with a couple generic questions. These aren't specific to amateur radio, but as problems that HAMs surely deal with, I didn't think it would hurt to ask here. (The appropriate groups have offered no help, so I don't have much choice.)

An overview of my system: I own Rat Shack's PRO-2006 scanner, and their cruddy discone antenna. The two connect via 75 feet of Times Microwave Systems LMR-400 coax. I live in the Los Angeles metropolitan area, home to lots of RF energy. The discone is on our second story roof using our television antenna's mast due to space restrictions.

My problem is that the scanner receives a great amount of intermod in the VHF band from TV/FM transmitters. When on VHF frequencies where intermod is not audible, reception is compromised by desensitization of the front end nonetheless. (If I flip the receiver's attenuator on (-10dB), all white noise disappears. Otherwise at -0dB there's lots of it. In the HF and UHF+ bands, no such problem exists, and I leave the attenuator off at all times.)

We live 25 miles from Mount Wilson, the home of all television and many FM transmitters in the area. With this in mind, I'm curious whether the intermod I'm receiving could be caused by my foolishly mounting the discone on (or even near) the television antenna? Note that each of the respective antenna's elements are not in contact with each other; merely the masts. Also, I installed this discone when I was 14, so that might explain the lack of forethought. :-)

I would normally assume this was the cause of my problem. However, due to the fact we are closer than the average bear to the main TV/FM site, I'm tempted to speculate as to whether I've simply overdone the antenna installation, period, and would receive this much intermod regardless of discone/TV antenna placement. Any thoughts on this? It would be tough to mount the antenna elsewhere, and I would as soon hear opinions before risking a broken neck testing the theory myself. Thoughts, please?

Finally, a quickie in regard to the term, "desensitization of the front end." I'm familiar with the problems associated with this, but I am unclear of the tense this term is used in. Does "desensitizing" the front end of a radio refer to the condition caused by another close-by transmitter, in that once that transmitter stops, the reception returns to normal, or does it refer to a PERMANENT desensitization of the front end, as in damage thereto?

Any help on either of these would be *greatly* appreciated.

Brian

Hi. What kind of topics go to .misc ?? you know ?? weather ??

>To sum up, .policy was created years ago to take the code debate
>off of .misc and the other groups.

then what kinda things are you able to discuss in .misc ??

antennas ?? .antenna
propagation ?? .dx
packet ?? .digital
equipment ?? .equipment

not much things you can discuss here.

If they don't see it here, they most certainly hear it on-the-air. Better for them to read it on their computer and decide here and now that amateur radio is a waste of their time, rather than after they spend all the time and money on licensing and equipment.

If reading this newsgroup isn't enough to deter them, I'm sure a quick scan of 75m on any given evening with a portable shortwave receiver ought to do it.

Gee whiz, you fella. I hate to burst your bubble, but neither writing on this NG, nor spouting off on 75 Meter phone is likely to reach "influential people".

If you wanted to go duck hunting, you would be advised to learn something about ducks. What do they look like? Where do they hang out? What gets their attention? If you're hunting people with influence, I recommend you ask yourself the same questions. Otherwise, you are guilty of duck hunting simply by repeatedly firing your rifle into the air. I doubt that you'll hit anything on a regular basis!

Even none English speaking Europeans find Benny Hill funny, is it too subtle for the US or something?

Why was Mr. Bean such a big succes in the USA? It's quite similar, it would have been better with Hill's Angels ;-)

Ignore the spam, trolling etc. It the best way to silence it.
I monthly FAQ post would help get new reads to ignore these post also.
If it is a marginal case (troll or newbie) then reference the FAQ.

I'm new to HAM but one of my first experiences on a repeater
was during the spring break party known as Freak-Nick. At the
time I listening in to a round table on the repeater when this
guy breaks in with a very nice sounding rig and starts spouting
all sorts of insults. No call sign nothing. The repeater when immediately
silent. Nobody signed, questioned the action or anything. Dead silence.
He spouted off a few more times and then left. The repeater stayed silent
for at least 15 minutes. No mention of the station was ever made.

If there is no reward for the action in the way of responses then
only the most extreme will continue to post.

Just my 2 cents.

Ed

>or anything. Dead silence.
He spouted off a few more times and then left.
>The repeater stayed silent
for at least 15 minutes. No mention of the
>station was ever made.

For those who don't know, Freak-Nic is an annual Spring Break ritual where thousands of black college students invade Atlanta for several days of drinking, drug use, destruction of property, vandalism, etc. The reason nobody said anything about the repeater abuse is sadly typical of the politically-correct junk society that we live in. If someone had objected to the manner in which the Freak-Nic'ers were conducting themselves, they would have immediately been branded as racists and bigots by the powers-that-be. Some Johnny Cockroach-type lawyer would probably file a discrimination suit against the complaintant as well.

>>
>>Technically inaccurate. Techs comprise ~175K of all licensed amateurs.
>>When combined with Tech-Plus licensees, they together accrue to ~28% of
>>all amateur licensees.

>THIS IS A BALD FACED LIE!

Maybe not a lie, but certainly inaccurate,
Techs and tech pluses account for 43% of
all licensed hams. see below:

Thanks to the W5YI report, here are the latest statistics
for amateur licenses in the USA as of 12/1/97.

Total licensed hams: 719,341
This total is only 1.1% increased over last year at
the same time. The net increase is only 7582
over December 1, 1996.

Of the total, here's the breakdown by license class.

Extra: 75,694 an increase of 2176 which represents
an increase of 2.9%. The percent of all hams that
are Extra is now 10.5%, up from 10.3%.

Advanced: 112,482 a decrease of 1922 which represents
a decrease of 1.7%. The percent of all hams that

are Advanced is now 15.6%, down from 16.1%.

General: 124,415 a decrease of 2299 which represents
a decrease of 1.8%. The percent of all hams that
are General is now 17.3%, down from 17.8%.

Tech Plus: 147,559 a decrease of 782 which represents
a decrease of 0.5%. The percent of all hams that
are Tech Plus is now 20.5%, down from 20.8%.

Tech: 179,226 an increase of 18,636 which represents
a increase of 10.4%. The percent of all hams that
are Techs is now 24.9%, up from 22.6%.

Novice: 79,965 a decrease of 7582 which represents
a decrease of 10.3%. The percent of all hams that
are Novice is now 11.1%, down from 12.4%.

Some thoughts:
With the sole exception of the Extra class, all other
license classes with HF access have decreased.
Indeed, it can be seen that the total of all
hams with HF access has DECREASED by 12,054
over the last year. In the same time, the Tech
license (nocode) has increased by 18,636. This has
caused an over 2% shift in coded vs non-code hams.
Indeed, today, 1 in every 4 hams is a nocode ham.

The percent of hams with 13wpm or 20 wpm code
qualifications (Extra+Advanced+General)
is down to 43.5% from 44.3%.

Anthony,

What is the Ten-Tec 10m rig you mentioned ? Do you mean a Scout with the
10m module plugged in ? Please let me know as I may be interested in
getting one.

Who will talk back to them? The two times I have heard someone talk without a callsign (or with a made-up callsign) No one ever responds or even lets them know that they can hear them. After 1 or 2 minutes, the person thinks their radio isn't working and goes away.

> Do you hear the repeater jammer or 2m abuser saying his callsign?

No, and I don't see Murderers abiding by the law that says murder is illegal either. What is your point?!

K5PF explains:
No. Contrary to popular belief, coded transmissions are allowed in the Amateur bands. Some examples of legitimate use of secret codes include telecommand codes used to protect the security of a space station [97.207(f)].

Also, repeater trustees can use authentication codes to secure access to the control functions of their hilltop repeater).

Your accusation really stretches the point.

This is one of those stories that circulates from time to time, but which is impossible to verify. In fact, it seems highly unlikely. I have worked at high-powered CW stations (5000 watts) where we monitored our sending on receivers hooked to antennas in close proximity to the transmitting tower. In decades of such operation, no such "smoking" or burnout of the front end occurred.

The same is true of radio and television broadcast stations, where the engineers at the transmitter site monitor the "final product" beside transmitter/antenna combinations producing millions of watts of ERP.

We're not having a problem getting the message to them, thanks to CW, RTTY, and Packet. The majority stray into 28 MHz without realizing the band is occupied. They get the idea real quick!

However, thank you for your concern on this topic.

No, Mr. Rambo. It refers to your obvious hostility to everybody and everything that does not conform to how you think the world should be.

You must be a joy to be around in person! Everything has to be your way, or it's wrong. No middle ground. Never saying, "Well, you have a good point there." Always complaining about how things are so bad, and how everybody is "out to get" you. You are WAY too defensive.

Lighten up, Old Man. There's plenty of GOOD in the world. Yeah, there's some rotten stuff going on, but don't condemn the entire planet over one or two issues.

K5PF
"Always remember you are unique, just like everyone else."

1487. Rain Dial-up for 2/13/1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-13 00:00:00 UTC
From: arnoldr@ollie.ralabs.com
Message-ID: <34e19225.127594691@news.axess.net>
Source record: 178246

This is being posted at the request of KC9RP who currently does not
have newsgroup access. Please direct your questions about RAIN to Hap
at the address at the end of this message.

The Feb. 13, 1998 edition of the RAIN Dialup includes:

"Long Path - the Long Way Around",

World Radio magazine propagation columnist Karl Luetzelschwab/K9LA
talks about this phenomenon in an interview conducted by RAIN
Founder/Producer Hap Holly/KC9RP (7 minutes, 18 seconds).

"In the Beginning"

In this RAIN flashback to Nov., 1990, Larry Miglore/KB9DIP reads
this humorous look at the evolution of ham radio as posted on packet
by Tom/AA6MZ; (1 minute, 44 seconds).

The RAIN Dialup updates Fridays on the worldwide web at
rrsta.com/rain (encoded with Real Audio 3.0 streamming audio), and
telephonically at area code 847-827-RAIN. This weekly info service
is heard in Syracuse, NY 7 PM Sundays and 8 PM Tuesdays during the
N2DCI Central New York Bulletin Service on the N2JEU/146.67 Mhz
repeater, serving greater Siracuse.

You can have your E-mail address added to our new RAIN
distribution list so you'll know the contents and playing times of
each RAIN Dialup before it airs anywhere. Send a message with the
words "RAIN Distribution List" in the subject field; the only text in
the message should be your E-mail address. Send your E-mail request
to: arnoldr@ollie.ralabs.com.
Barring server congestion Bob Arnold/N2JEU will distribute The
weekly RAIN Bull no later than Friday.

The RAIN Dialup is copyrighted 1998, all rights reserved.
Unrestricted local VHF/UHF over the air dissemination of the RAIN
Dialup is exempt from copyright licensing. Audio distribution of this
service is licensed only to the following outlets:
Internet: Bohnhoff Mediacasting (rrsta.com);
H.F.: Vern Jackson/WA0RCR's 160-Meter Gateway Radio Newsletter

(Saturdays, 8 PM central on 1860 Khz AM from Wentzville, Mo);
Satelite: This Week in Amateur Radio (9 PM Eastern Saturdays
on SBS
6, 13B Horizontal, 5.8 Mhz audio).

If you run both RAIN and either Newsline or the ARRL audio news service on your net, we suggest you run RAIN at the end after all traffic and check-ins have been handled. Those stations needing to leave can without fear of missing the formal part of the net. You'll be surprised, however, just how many will check in and stick around to hear a program that probably no one else in the area is carrying. And remember, a regular check-in is a prime candidate for becoming a member.

Hap Holly/KC9RP, Founder/Producer of RAIN
Radio Amateur Information Network
E-mail: hholly@ollie.ralabs.com

Date sent: Thu, 19 Jun 1997 02:00:59 -0500 (CDT)
From: "Paul W. Schleck K3FU" <pschleck@oasis.novia.net>
Subject: WELCOME to rec.radio.amateur.misc
To: kf2ti@mailhost2.planet.net

Hello,

This brief E-mail message is automatically sent to every new poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). Please note that even if you don't read or subscribe to rec.radio.amateur.misc, you may have inadvertently crossposted to that newsgroup by following up to an existing article crossposted to many newsgroups, including rec.radio.amateur.misc (as the default behavior of most newsreaders is to inherit all of the target newsgroups of the previous article when following up). You should only receive this message once. My apologies if the program contacts you twice, perhaps at two different accounts. This is not a flame (criticism), only an attempt to help newcomers get the most out of the newsgroup. As this message is sent automatically, it is also not necessarily a criticism of your posted article. The information provided here represents good consensus advice that has been gathered over the years by experienced participants like myself. I hope you will consider it in that spirit.

Please look at the following resources, which will often answer your questions without the need to post at all. Every post to the newsgroup consumes the time and effort of readers all over the world, and your cooperation is essential to make the newsgroup useful for everyone. A little effort and expense on your part can save a great deal of effort and expense for others.

Thanks!

* * *

1. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

2. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

3. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

4. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

5. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

6. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

7. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question.

8. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

Since I read most of the posts, and found that nobody was giving information you would find helpful, and since I have no idea personally where to look, I would suggest a library. They often have many volumes available for all sorts of ham equipment, and electronic equipment in general.

Good luck.

I just want to let you know that I have passed the telegraphy exam
so that I got the new callsign DL2LFH which replaces my old one
which was DG0LFH. Since there may be several people who have
bookmarked my WWW page http://disr01.mpae.gwdg.de/~jmh/Funk.html
using my old callsign, I'd like to ask them to change their bookmarks
or links accordingly.

First of all Drew is dead wrong. It is common practice to ignore the
interference. IOW, do not acknowledge the jammer, he gets bored and goes
away. Drew knows this yet chooses to interject his asinine brannd of
logic. As far as his reports of the Freak Night, that's Drew. Racist
supreme. I'm surprised he didn't drag out his dull and boring tirade
about "the brothers" who use their welfare checks to by all this
equipment. If you go to Dejanews and look up under Drew Durigan and MN
Manic, you'll see many of this patheric racist remarks. In fact, sources

state that he as fired from his last 2 jobs due to complaints about his "opinions" on minorities.

Anyway, ignore the jammers, they'll disappear when they find thet don't have an audience. The same would probably hold true on 75 meters except you have people like Drew who are entertained by all of it. Too bad

Good Morning, Andre,

If I correctly understand the prefix "back" in a nautical context, it
would mean "forecastle" or "foc'sle" as we say. If that's the case
then wouldn't the german word Backstag translate to Forestay?
Continuing with that thought, then it's no wonder that languages can
become so confusing. Anyway, makes a nice conversation item.

Oh..... So all the $$$$ to be generated by an influx of No-coders to HF will drive the "compelling reason" process toward allowing it to happen. Daydreaming again, Dave?
If that's all you've got, your movement is in the saddest of shape, to be sure. And frankly
that looks to be about the extent of it. Next you'll be saying that $$$$$ is all that has caused the FCC to ignore the Freebanders. Well, actually you'd be right but for the wrong reason--it's dollars withheld from FCC budget that did that. And you think they'd willingly add to their already-overwhelming problems by exacerbating an already-bad situation? Dream on..

>Tech+ 138K 1/98

My statement still stands. "Techs" do not comprise 47% of the amateur
radio population. "Techs" comprise ~28% of the population. "Tech+" is
not "Tech".

[A typical No-Code Agenda tactic, for our readers in USENETland, is to
combine Codeless Tech licensing statistics with other license classes,
in a feeble attempt to augment their debating position by claiming more
'support' for a subsequent statement applicable to Codeless Techs only.
The fact remains that there are ~495K coded hams, and ~181K Codeless hams.]

>{other mindless statistics clipped to prevent KH6HZ from further shame}

Which statistics might those be? The ones from the same site that show
an INCREASE in the number of licensed amateurs in ALL license classes
(and, I might add, totally blows away your claim that licensees are
DECLINING?)

I have spoken to the FCC twice on the subject of illegal operators in the 10 meter band, and the FCC does not care what the hams do to run them off. Since they are not licensed to use the 10 meter band you are not violating any regulations by interfereing with them. The FCC does not even care if you operate on phone in the CW band to warn them that they are operating illegally on the 10 meter band. In other words, since the FCC no longer has funds/manpower to deal with the problem, they are leaving it up to the hams to do whatever is necessary to protect our frequencies.

Since you seem to have so many hours a day to waste combing through old Deja News articles, why don't you pull up some of the news reports regarding criminal activities which have occured in Atlanta during the annual "Freaknik" festivities. Better yet, why don't you go to Atlanta and ask the downtown merchants what THEY think of this yearly invasion of their city? Ask them why many chose to close their stores and leave town during Freaknik. I'll bet I already know your answer...because they're all "racists", right? Couldn't possibly be due to the fact that they wanted to escape the vandalism, shoplifting, and other criminal activity that this rowdy bunch engages in upon their arrival to Atlanta, could it?

You seem to know this guy pretty well. You have literally spent hours researching his life's history. Why are you so infatuated with Drew, his life, his opinions, and his employment history?

As far as your comments on him being "fired", do you know this for a fact? Are you certain this is true? If I were you, I'd be very careful about posting information like this publicly. You have just defamed Mr. Durigan publicly and attatched your name (callsign) to your remarks. Now I'm no lawyer, but I'm sure there are a few who are reading this thread. My opinion is that your actions have made you a prime candidate for potential legal action to be taken against you for libel and/or defamation of character. Since you are so

familiar with DejaNews, you are no doubt aware that your statements will now be preserved for a very long time. Good luck.

I read the thread. I know who Masa is and I know the call used by the enlightened one is from the 5 Call Zone where the use of BOY is commonly used to put down others not deemed to be of much value and certainly not near as valuable as the user. Masa is from Japan and is young and is in Canada going to school. His comments may seem adolescent to you and they may be, but I suggest that he is Putting thoughts formed in Japaneese into written English with a Canadian Accent.

I note your Name and your Call Jeff. Have you learned any of the local languages there yet, and if so, how stupid did you sound in the begining? One more thing sir, how many people told you that you sounded stupid? Probably had more class than that.

You are not the one using the term but since you interveaned I will vent at your expense. BTW, all the rest of you "I'm better than you" folks out there that feel so superior, have you ever attempted another language? No, Morse is not a language and you know it. Those attempting another language should understand the problems Masa is going thru and in the face of your juvenile crap throwing he still hangs in there because he has something to say. You may not like it and you may not agree but thats life. One more BTW. Jeff you used the term adolescent in describing Masa. Do any of you know just how juvenile it is to come down on someone in his situation. I bet you do the same to new guys using OOK for the first few monthes untill they get the speed and accuracy up to YOUR STANDARDS.

Lighten Up,

Curtis, I am begining to wonder just what the hell the Navy taught you
in 20 years. First, from the size of the chip on your shoulder, I think
the Navy would have done better to loan you to the Marines so you could
get some serious fighting done rather than just sit around in the Comm
Center pounding your key. I for one appreciate what your efforts did
for the country but I do wonder.

As for the Saddle mounted CB? It was a Hand Held unit and used
Batterys. Am I wrong in assuming you also learned Radio Repair, and if
so, did they not teach you about batterys?

BTW Curtis, he also had a BC radio, loved his C & W music.

Dick:
read what I wrote and stop twisting my words to fit your insults. I said that the reason why the Government would eventually eliminate the code Requirements would be the cost of maintaining the requirements. Money! Economics! The government could give a damn about CW other than the cost of maintaining it as a test requirement. They consider it obsolete and eliminated it from government service because it was not "COST EFFECTIVE TO MAINTAIN IT." Other modes are more effective and give more capability for the dollar. Your living in a fantasy world if you think the government cares on way or the other for tradition or the dozen other myths, you and others chant like a Mantra every time someone mentions eliminating the requirements.

Ok Ed Ill bite back.
My HF and VHF stations operate off of 12 volts. I have two deep cycle marine batteries that can operate my stations for many hours before needing a charge. And when the charge is needed I have my choice between one pickup/camper, two cars, one SUV, or one motorcycle to do the charging for me in quick order.

Antenna blown down? No problem I have a portable antenna system that consists of a 40 foot mast with a vhf vertical on the top and the apex of a g5rv hf antenna just below that. I can put it up in under 20 minutes. Great fun for camping. Get to do some ham radio after a day of fishing. Also great for being prepared for emergencies.

I can get on portable on all modes that I work at home. CW, SSB, FM, Digital...

Hello!

I have an 8-channel Motorola Maxtrac/Radius VHF-Lo Band radio. I have 4 channels programmed to Red Cross frequencies, and used the RSS to successfully program the other 4 channels to local 6 meter frequencies. Is this radio capable of tuning both sets of frequencies without re-tuning the radio? At present, it transmits AOK on the Red Cross frequencies, but does not on the 6 meter channels. I did notice during programming, that the RSS displayed a caution/error message on the need to possibly re-tune. Any suggestions or assistance would be greatly appreciated on this. Thank you in advance!!!

> call the german Backstag ?
>
Hmm. From an illustration in a german-language book, I derive that the
`Achterstag' is a single stay that runs down from the top of the mast to
the stern along the centerline of the boat. `Backstagen', of which there
are two, run down sideways, aft of the shrouds, but still forward enough to
be in the way of the boom. Therefore they are kept slack on the leeward
side and need to be adjusted each time you change tack. I guess they're
not very common any more (probably because modern rigs leave room for a
fixed backstay).

As I said, this is just what I'm gleaning from a little figure and may
not be accurate in general. Also, I don't recall the english term for
`Backstag' (`running backstay', perhaps?)

> "I wanna hear him TALK TOUGH!!"

Of course Drew, the CB Dimbulb speaks out his arse again and again and
again. A number oif us actually did speak to Drew's mentor in
anti-radio, Burt Fishser. Of course, Burt insisted on 40 meters during
the late evening so as to make it difficult to hear him under the
braodcast stations. Of course, Burt, like Drew aka The Grand Klingon of
Witchita, then posted that he never spoke to anyone. In a way it was
true, Burt never shut up for more than several seconds to take a breath
and then continued with his vitriol attacks.

Drew has sat at the master feet and kissed them many times over. Now if
only Durigan would take a lesson from Fisher and disappear into the
woodwork, thgings might get back to normal.

Sooner or later Durigan will meet a bigger goofball than himself and then
he'll find out what it's like to be on the receiving end of a good ol
fashioned asskicking. Hopefully when it happens, he won't get anymore
brain damaged than he already is.

In closing, check out Drew's little webpage. Tsk tsk Drew, I can
remember you insulting people of their pictures. Seems to me, someone of
you advanced WEIGHT, shouldn't be speaking out too loudly.

Take care, glad to clear up th confusioin and set the records straigjht.
Hate to think the the racist little shithead was anything but...

Hello Steve,

I read your post with intrest as pertained to Len A. mostly because I too am Military and knowing he is too, wondered many times what all he was into, but unlike you seem to have been exposed to, I find very little from Len at all. I see more jabs at his Military duty from others than I ever see from him. Just guessing but do you guys really envy that duty so much you have to put it down to feel better?

There are a few here that need very much to remember who said what. Myself, I have a very weak Computer, and Browser and may have missed many of Lens posting of his life in the Military, and if so, feel mucho bad for that. My speed? I'm up to 45wpm on this thing and leveled off.

Regards

Yes, Masa has a problem putting English words to his Japanese thoughts
but when he makes it I usually agree with him. Unlike the other side,
giving someone the benefit of the doubt just seems like something a good
operator would do. I am a little miffed at not being included above as
being one sided even tho I don't think I am.

Take Care Jim,

Gee Mike ... what happened to the party-line assertion that
"5wpm is no-code" ??? (you guys can't have it both ways)

The recent statistic that *I* found amusing (and encouraging)
is that ARRL membership (in total numbers, not just in percentage
of licensed hams) is on the decline. They're too stupid to
figure out that the majority of hams don't favor their policies,
but that won't matter before long as they will be so small a
minority of hamdom that they won't be able to throw their weight
around with the FCC to keep the ARS stuck in the past.

Perhaps, Jeffy ... but NOT before Morse code ... remember, there was
telegraphy before telephony.

I thought I would post some new(and old) Clinton jokes for the
enjoyment of all of the wonderful readers of this NG. Hey, after all,
hams gotta laugh, too!!!
If your squeemish about sexually related jokes(as some of you are),
read no further.

--

What did Clinton say to Al Gore about the whole affair?
Pardon me!

What's the difference between Nixon and Clinton?
Deep Throat brought down Nixon, but Deep Throat
WENT down on Clinton!

How can you tell which one of the White House interns
is the head intern?
She's the one with the dirty knees.

Did you hear Clinton doesn't use bookmarks?
He just bends over the pages!

Why doesn't Monica eat bananas?
She can't find the zipper.

What was yesterday's Washington Post Headline?
Bush Beats Clinton

President Clinton said to Monica, "I didn't tell you to lie in
the deposition ...
I told you to lie in THAT POSITION!"

Realization of from another White House intern . . .
And all that time I thought that humming was the shredder!

Why does Clinton think he's innocent,
Because he didn't inhale the intern!

How did Bill reply regarding questions of "coaching" Monica's
testimony?
"It wasn't words that I put in her mouth".

President Clinton, what do you want to do about this abortion bill?
"I guess...pay it!

What's the latest game played at the White House?
Swallow the leader.

Why does Bill Clinton wear underwear?
To keep his ankles warm.

How did 500 women sampled at random respond when asked if they
would have sex with Bill Clinton?
86% responded "Not again."

What's the difference between Watergate and Zippergate?
At least this time, there's no doubt

about the identity of Deep Throat.

What advice did Yasar Arafat give Clinton in their meeting last week?
"Bill....Goats don't talk!!"

What do Bill and Ross Perot have in common?
They both heard a giant sucking sound

What was the draft title of Hillary's book?
"It Takes a Village to Satisfy my Husband"

Who were Monica's closest friends during her internship?
Kneel and Bob

Has the President changed his official title?
Yes, from Commander-in-Chief to Seaman First Class

What was Clinton's excuse this time?
"I didn't impale"

Carson Valley Radio Club Sponsors Classes

The Carson Valley Radio Club will be sponsoring a nine-week Technician licensing class beginning Wednesday, March 4th, at the Minden/Tahoe (Douglas County) Airport, located between Minden and Carson City. Registrations will be accepted up to the second class meeting.

The class will be taught by experienced instructors Bob Grissom, KI7GN, Harry Hampton, N7MBO, and Dick Flanagan, W6OLD, and will culminate in a special VE testing session. This will be the fourth consecutive year this dedicated team has taught these successful classes.

The classes will be held every Wednesday evening from 6:30 to 9:30 p.m., at the Sierra Front Interagency Dispatch Center, 2311 Firebrand Road, Minden. All instruction will be free, with students required to provide only the text book, "Now You're Talking," 3rd Edition by ARRL, which will be available for sale at the meetings.

For more information, please contact Dick Flanagan, W6OLD, at (702) 267-4900, via e-mail at w6old@qsl.net, or visit the CVRC Web Site at http://www.qsl.net/w7di/.

Mark, are you insisting that emergencies and disasters are common occurrances? That will certainly come as news to most of us, particularly those of us who worked our carreers in the public safety field. If the saving of 3 lives is not considered to be an adequate "emergency", how many would it take? 6? 16? 25? A minimum of 50?
Gee. I guess that an individuals' life doesn't count any more, after all, if three individuals don't..

Damn! this No- Code Agenda is determined to rewrite far more than just ham radio rules. They are trying to doing a job of redefining any and everything that gets in the way of their beloved No-Code Agenda. Look out Radio World!!!

I don't guess the dimwitted Doc ever saw-or even heard of- a water resistant sealed HT case. And the electret (capacitor) microphones--waterproof? Hardly, I'm afraid. And the paper speaker cone--waterproof? HA HA HA

It's very easy to discount an event when to do so promotes one's agenda---and when it's the No-Code Agenda being promoted, it's not only easy, It will be done, in spades!!!!

Get a clue, you ninny calling yourself Dr. Bellows!!! Your "Agenda is showing--and it doesn't look a bit prettier that your personality. While you're at it, get a *real* name, of some kind. Assign yourself one if your mother didn't.

Costs? to the government for testing amateur radio applicants in Morse code?
Where you been? Maybe it would've been beneficial for you to have taken a code
test, after all. At least you might know it doesn't cost the FCC or any othe
government entity a red cent to test EVERY ham radio applicant, neither for code
or anything else. All the costs are borne by the applicants themselves, thus the
$6.31 testing fee. Sorry, Dave, another one bites the dust.

Funny Carl, but I don't ever recall making that statement. If anything,
my operating habits (which I've posted on numerous occasions), where I've
stated I work primarily in the 80 meter novice CW band, would seem to
directly contridict your assertion.

>The recent statistic that *I* found amusing (and encouraging)
>is that ARRL membership (in total numbers, not just in percentage
>of licensed hams) is on the decline.

There was a small drop in numbers versus last year's statistics. This
is not surprising, and is not unexpected. I haven't seen ARRL licensing
stats for a long time, but I wouldn't be surprised to see that their
licensing numbers have fluctuated up and down in the past.

>but that won't matter before long as they will be so small a
>minority of hamdom that they won't be able to throw their weight

I suppose its nice to have dreams, even if they are unrealistic. But,
keep dreaming, Carl, its nice to have something to hold on to.

Doc, I just don't beleive what you wrote. You must live a very sedentary life if you can't hear rowdy on VHF. It seems to be one of the major headaches for repeater owners/operators. The fact you never tune HF in some circles would be grounds for asking you turn in your title as a Ham. Seems to be a common thread here decrying the deteriation of the Ham Bands and users of same. In the 40s you could find rowdy if you had a Recvr and Ant any time of day or nite so I will assume you are in a bad hair trolling mood or just plain out of touch with reality.

Haven't done any CB work for at least 5 or so years, but when I did, every day and nite I NEVER used a handle and ALWAYS used my name as did every one I ever talked to. We operated SSB which I will admit to being somewhat different from AM. Many of the folks we talked to regularly were in fact Hams using Ham Equipment on 11 meters, with the good grace to keep it QRP. I will suggest that never hearing anyone use their real name on CB can only mean you only worked AM frequencys where handles were a major part of the fun of being there. Tell you what tho, you give me the state and I probably talked to someone there, and if I did you can bet they used real names.

BTW, Hams have and use Call Signs right up to the time they feel like raising hell, then they very smartly drop them. Wouldn't you?

Regards

Ed
d

1543. Illegal Ham Operator (was: Annoying CB'er)

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-13 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <19980213000600.TAA25859@ladder03.news.aol.com>
Source record: 178349

In article <34e34749.0@news.itsnet.com>, jevans@itsnet.com (John Evans) writes:

>
Finally, in frustration, a ham in the neighborhood waited until the next
>time
the CBer was on the air, turned his yagi toward the CBer's house, tuned
>his
HF rig to the CBer's freq, fired up his 10-meter linear amp, switched to
>CW and
put a book on the key for a good 30 seconds.

Let's see...how many crimes and illegal acts did this particular amateur radio operator commit?

1) Unidentified transmissions
2) Transmitting outside the amateur bands
3) Transmitting on citizens band radio frequencies without FCC type accepted equipment
4) Transmitting on citizens band radio frequencies with power levels far in excess of the allowable 4 watt maximum
5) Willful and intentional destruction of another's property

etc., etc., etc.

A fine example for radio amateurs everywhere to look up to.

> 73, Hans

Hans ... you know damned well that I only have access to the novice bands (tiny slivers, OOK Morse only) on 80/40/15 ... and only a couple of hundred kHz for digital on 10m ... even if 10m were open all the time, having access only to 10m would not be adequate to evaluate a modem/protocol designed to cover all of the HF bands on an adaptive basis ...

You're just trying to stir the pot and obfuscate some more ...

I wasn't "name-calling" ... I was stating the facts ... Mike continually
lies about me and his comment was ignorant in both the technical and
"good old-fashioned" senses ...

Your statements in the paragraph above demonstrate quite adequately your
profound lack of understanding of the technical realities to which I was
referring ... since you are obviously incapable of understanding the
differences I see no sense in wasting further bandwidth arguing with you
about it ...

You must really be losing it Hans ... it's not "evident that that is not true" to most PEOPLE I know who have had contact with the pro-code crowd. I haven't heard any rocks voicing opinions ... if you have, I suggest that your mental state (and therefore YOUR opinions) should be called into question.

Fact is code is hardly ever used in emergency traffic any more ... much better methods exist for passing messages reliably and quickly ... EMS folks could care less about Morse ... they want digital communications for bulk traffic and FM/SSB voice for tactical comms ... tell them you have a corps of beepers ready to serve them and they'll laugh you out of their offices.

Think about THAT.

Hi Masa

Everything in it's place. Policy in policy, antennas in antennas, etc, and stuff that does not fit into ANY other category belongs in misc. Misc should have almost nothing in it. Also, it inconveniences a lot of people when somebody cross-posts into all the rec.radio newsgroups. At least pick just one ng, even if you feel you must be off-topic. Most of us read all of the amateur ngs, and it is a bother to have to wait and download duplicate posts. You might even say it is rude. Well anyway, 73 de AB5VH

"Where's that big 'ol CB RAMBO??"
"I
>wanna hear him TALK TOUGH!!"

That depends on whether he listens to the fone portion or the CW portion of the band, Drew. Things are pretty mellow down in beep country. Hook up a Hamcomm board to your rig and computer and check out what people are saying and how they say it on CW. I have never heard a word of foul language on CW, and I have never heard anything you could really call rude either.

Please, could you lay off the "It's a waste of time" thing? If amateur radio is a waste of time, then why waste your time on the amateur radio ngs? Geeeez, lighten up already!

>and kiss my ass...
Right,
>Masa?

WB5BNQ
>
>
>_____

Come on, DeWayne... freedom to do something does not mean it is the polite or considerate thing to do. We should keep things on topic to a reasonable degree, especially when a post clearly is more appropriate in one or another newsgroup. Cluttering up misc with topical concerns defeats the purpose of having misc, which is a place for stuff that fits no other sub-category. If we are going to throw everything into misc, why do we need the other rec.radio.amateur ngs at all?

Think of this as a voluntary bandplan. Yes, it is legal for me to call CQ in RTTY on 14300, but is it appropriate or considerate? This is a similar issue. The Rush joke was kinda funny, and I bet there were not too many objections... after all, we don't have a tremendous problem with joke clutter here, and we need a chuckle now and then. Now a Ham Radio related joke would have been PERFECTLY appropriate there, unless it involved policy, antennas, homebrewind, packet/digital, etc. Misc should have nothng in it except the leftovers that don't fall into the other classifications. In contrast to the solitary joke, this CW stuff is using up multi-gigabytes of space and hours and hours of time belonging to those who simply don't care one way or the other. Maybe "policy" should be changed to "morse_debate". Everybody with an opinion could go there and know that their post will be read by somebody interested in the issue. Maybe for some people the connection between "policy" and code testing views is a bit vague.

With everything compartmentized neatly, the busy ng reader can pull just the topic or topics he wants and has time to read. There is an expectation that a reasonable amount of stuff in the ng will be related to the topic suggested by the name. It is rude to include a bunch of stuff that the reader is not interested in and that clearly is more appropriate in another ng. For instance, if I am not interested at all in homebrewing, only in antennas, shouldn't I be able to download just antennas and not have to wade through a bunch of threads on mods, parts suppliers, requests for schematics, etc? Especially if I am paying for every minute I am online? In that context, the homebrewing stuff is, well, spam. There... I said it and now I feel better.

Hi Larry. You will have some attenuation but probably/usually still have a
usable signal If you can get your dish in the clear you will be glad you did.
I have a friend who has his sat dish partly blocked by a HUGE mesquite tree and
his setup works "ok". His SNR will typically be 10 points lower than his
neighbor with the same system.

Rumor has it that Madonna and the feds are trying to have me
arrested because of my web page. Hmmmmm.

My web page(soon to be a site) is called America's Line.
Location:
<URL:http://members.tripod.com/~amline/index.html>
Yahoo Search: Madonna Scandal, Army Scandal, America's Line.

If you can't access the page__guess who's blocking the
file transfer.

I'm the guy who was framed while working as an engineering
intern(civilian) for the U.S. Army(NASA-Lewis).
You know, low paying job sharpening pencils.

The job was a set-up(the defendants__yes there is a federal
civil rights lawsuit)__because the defts felt I was
gay___hmmmm. Yeah but the conspiracy nature of the case
goes back to early 1984 when M was doing DSS and Whose That
Girl___

The page contains loads of documents and pictures
(yeah that's a picture of me and Ted Kopel). I have
contacted celebrities and news people concerning the story,
there are pictures of these people on my page.
You might find the interesting__more important, its real.

Screw the world and help promote the page.

All you CB and Ham operators__why not talk about
America's Line. The people have the right to know!

Thank you.

20 typos out of 500-700 pages? I'd call that exceptional. But, I hope you're not comparing your physics text to your homely page. The author of the text will correct the typos in his next edition, while your homely page's errors remain, even after they've been brought to your attention time and time again.

To pick an isolated incident out does not prove that something has merit in a general sense. I'm sure we have all heard the cases where a plane has crashed and one of the passengers used a mobile phone to call for help. Yes, lives were saved in this instance, but it does not warrant everyone being madated to carry a mobile phone just in case these circumstances arise again. Otherwise, we might as well argue that because there has been a case where ATV was used in a medical emergency, it is grounds for mandating everyone have ATV.

To put it in more mundane terms, just because someone won the lottery does not mean that we can make a case that it is a good investment strategy for everyone to buy lottery tickets.

As I've said before, if you want to mandate something that has a proven record of saving lives, many times higher than Morse, make amateurs learn CPR and First Aid for their licence. Both of which are relevant to Amateur Radio because of the electrical nature of the hobby and can be easily shown to save thousands and thousands of lives a year.

However, I don't think saving the most lives by Amateurs is really the objective, is it?

Mark.

Maybe they should hire some ex Navy Radiomen as proof readers.
Nothing got out of Radio with a typo .. Maybe some spelling errors
but that was the way an Officer sent it in.

[One or more binary attachments are retained only in the source text.]

I have NEVER heard any conversation on the Ham Bands that was "rowdy" at
all!! (It may put you to sleep though) Of course, I only listen to
2-meters and above, so I can't speak for the "HF" bands. Are you saying
that the Code loving Hams get rowdy on the air?! That would be a good
reason to eliminate code then.

> Hams it won't for CBrs either. BTW, in most circles, CBrs having Handles

Exactly. The "call sign" requirement must be kept to keep people nice.
The Code has nothing to do with it.

: Make it a requirement that [CBers] have to identify every ten minutes with
: a call sign that gives away their names and locations, and that practice
: will end IMMEDIATELY as others will rip the antennas off of their homes!

It doesn't work with hams, so why should it with CB? Just because it's a
requirement to ident every so often, doesn't mean people actually will.
Do you hear the repeater jammer or 2m abuser saying his callsign? Only the
legitimate users will play by the rules.

> their tree was swept away.

What a bullshit made-up story!! Microphone and Speaker became useless
because of water, but the REST of the radio worked OK?! HA!! A wet
circuit board may not transmit very well, but the Mic can still operate
when wet!

Quit trying to make up ridiculous situations to try to show a
hypothetical instance in which Morse Code would be usefull!!

The only time it was usefull, is when the Microphone and Speaker had not
yet been invented, and that was the only way to communicate over wire or
radio!

what is next?

My military career lasted only one year, from 1966 to 1967. We
had some American rubbish (now surplus) radio equipment which
replaced very much better German equipment which we must not use
because it was made the by bad "Germans", and all such equipment
should be destroyed, it was even thought to be BAD conduct to
say that "Germans made valuable equipment", although some radio
amateurs found some sources and had great pleasure from using
GER... equipment.
The only benefit from my military career was morse training and
amateur radio license (we were trained to work 18wpm).

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."
Your punishment is to say 5 lines of HI HI, text follows:
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

*** E-Mailing List *** UK-Vintage-Radio

The mailing list UK-Vintage-Radio is designed to promote the
interchange of information between collectors of (mainly) British
broadcast and communications radio sets.
It is meant to complement, rather than compete, with other
lists/Newsgroups of a similar nature.

Topics for discussion:-

* Collecting, refurbishing, storing.
* Sources of materials and components.
* Technical queries and discussions.
* Wanted & For-Sale.
* News of forthcoming events.
* Service information.
* Books and Publications.
* Societies, Museums info.
* W.H.Y.

TO SUBSCRIBE to the mailing list,

Email: uk-vintage-radio-request@webaware.co.uk

include 'subscribe' in the main body of text.

It is hoped that this facility will be of use to those who collect and

refurbish old radio sets, be they broadcast, ham, or military.

The list will be as strong as its contributors, so please feel free to

subscribe. It is hoped that it will provide a vehicle for sourcing
service information, manuals, and spares, also a good place for
technical discussion, hints and tips, buying and selling, etc.
Best of all, it's FREE!

Jeff...using the logic about telephone and landlines ...Samual F.B.
Morse invented the telegraph in 1837. Western Union Telegraph Co. was
formed in 1856. Al Bell didn't invent the telephone until 1876.

very true, but CWers don't notice it because they aren't on VHF and
above.

> Dropping the Code requirement on the HF bands will not
>make them like the CB band either.

CB band is very clear in my location compared to some of amateur HF
bands which include 80m and 40m.

The foc'sle is a storage or berthing area towards the bow of the
ship. It's the worst possible area to live, for the motion is
quite violent. Read Dana's "Two Years Before The Mast" to get
a better idea of shipboard living conditions (in that region
of the vessel).

>frequencies.

When I called the FCC I was told that they do not consider amateurs
transmitting on top of illegals as "intentional interference"; the
agent said "It's not possible to interfere with an unauthorized
transmission." "What if the illegals move to another 10m freq'y,
and the amateur follows them, then continues his CW transmission?",
was my next question. The agent repeated his previous remark emphasizing
"How can you interfere with something that's not authorized?"

I'm hoping the 10-10 gang will sponsor quite a few 10m CW contests as
we move into this next solar cycle.

The "local language" here in Hawaii is English. This is the 50th
state of the Union, Ed (since 1959).

>You are not the one using the term but since you interveaned I will vent
>at your expense. BTW, all the rest of you "I'm better than you" folks
>out there that feel so superior, have you ever attempted another
>language?

Vietnamese, so I could talk to my girlfriend's parents.

>No, Morse is not a language and you know it.

People say that, but that's due to their speed being so slow. When
I was learning Vietnamese, if I heard the word "an com" I'd mentally
have to translate it to the English word "food," but after a while,
some mental process took over and no translation was necessary.
Same with Morse: If someone sent _... ___ ... _ ___ _., I'd have to
mentally translate that to BOSTON. But eventually, no translation
was necessary - I heard the entire word, not the individual letters.
Just like Vietnamese, a mental image appeared. As far as I'm concerned,
the mental processes were identical. Only someone who has struggled
with both a foreign language and Morse will understand the similarities
of the processes.

It's clear that you'll defend Masa no matter how much of a pest he
makes of himself due to you residing with him and CBBIMBO in the
no-code camp.

Masa is "boy", both mentally and emotionally. That has nothing to do with
any language barrier.

>Maybe someone else can speak his language....HI HI HI HI HI

I'll give it a try. Drew, you know that cockroaches like to roam around
in dark places, right? But as soon as someone turns on a light they
scramble back to their filthy little hiding places. Same with the
outbanders and 10m. If the band is quiet (analogy: "a dark room"), the
outbanders ("roaches") sneak in and play and create little messes. Once a
couple of ham operators appear, whether using CW, RTTY, or Pack-it,
("Yikes, someone turned on the light! Run for your life, Guys!"), the
outbanders scurry back to their filthy little hiding places.

Do you understand now?

I bought one of these in hope of hooking it up to a Motorola radio for commercial use in a power plant control room. I have no manuals, the only one comes with the manual for the ICOM radios that the mic adapts to.

Looking to get PTT and Audio out of the infrared receiver.

Any help would be appreciated.

Congrats on getting your ticket! There are different nets for different subjects. There are weather nets (Skywarn), morse code nets, SSTV nets, Races/Ares nets, etc. Basically they are meetings to either practice stuff, inform or convey information. Some clubs have on the air meetings as well. Some are for fun, some are for more serious things like weather or emergency situations. Again, congrats on your new ticket and HAVE FUN!

Get a shortwave radio and start listening to the ham bands. Go to your
local Radio Shack and get a beginner's ham radio book.
Make friends with a ham.
Give a listen to what _everyone_ has to say, believe little of it.
If you think that you might like to learn morse code, do it. Many of us
enjoy using morse, but it is no longer a requirement for ham radio
operators.
Above all, remember that ham radio is an enjoyable hobby, so have fun
with it.
good luck and welcome to the madhouse!

You didn't specify amateur use, so that broadens the field. Practically every high seas shipboard difficulty, whether it be medical, man overboard, fire, DIW, flooding, or just routine traffic has been handled via CW this century. The distress calls handled via CW this century number in the thousands (see ABS or Lloyds' records).

>SEEMS TO ME TO BE THE EQUIVILENT TO "CODES AND CIPHERS" WHICH ARE
>ILLEGAL?

You probably believe that foreign languages you can't understand, such as Vietnamese and Thai, should also be catagorized as "codes and ciphers," too, right? What makes Morse and Vietnamese permissible is that the "ciphers" are available to anyone who wishes to take the time to learn them.

Actually, the worst part of the ship to be berthed in is near the Chiefs
mess after "Chili" night... ;)

The back part of the ship is generally referred to as "aft" or "stern"...
old sailing ships used to have a "quarterdeck" which was generally an
elevated deck in the aft of the ship often where officers were berthed.

In this whole "discussion" has anyone ever considered the fact that society
in general is changing?
You could increase the code requirements to 55 WPM, increase the written
requirements to the point where you would have be an engineer to pass and
you would have much less bad language and poor opperating practices on the
air because there would far less PEOPLE on the air.
People in general are getting less polite, louder, less considerate and all
together meaner than used to be.
I have no doubt that there going to be many people that will disagree with
this but you old timers out there, you know I''m right.

run fone in the CW subbands? I won't even run fone in the fone bands! FCC
doesn't care? Hmmmmmmmmmmmmmmmmmmmmm.......
Better to just run RTTY or CW on top of them. They don't have to be able to
copy it... just so long as they can't communicate without a QSY back down to
the outlaw band. Anyway, warning them by fone just gives them somebody else to
yak to.

Also, aren't most communications between amateurs and non-amateurs with very
few exceptions illegal? If legal methods work, use 'em. Communicate with
another ham, via a mode that the outlaw cannot copy, or just send an occasional
CQ, complete with a line or two of "RYs".

I second that. The ARRL has lots of resources especially for the newbie. They are not the only game in tow, but they are the biggest. ARRL publishes a wide variety of books on virtually every ham radio topic. They are also the biggest Volunteer Examiner Coordinator. QST, the monthly journal of the League, has lots of articles of interest to the new or wannabe ham. W1AW, the League's club station, sends Morse Code practice broadcasts several times a day.

"Now You're Talking!" is the best of all the study guides for the Novice and Technician class licenses, It is published by the ARRL and available at all ham radio shops and most Radio Shack outlets. There is a wealth of other info not on the test about operating procedures, setting up your station, etc

See my web page for a new ham FAQ file and a morse tutor program called SUPERMORSE by WD5CID.

That is what I said, I think. What I did not say was somethingstupid and lump all
no-coders into one, as you just did the
pro-coders.

What problems are the coders creating except for maybe you
not being able to copy them and you wondering if they are
talking about you. Way to solve that problem is learn the code.
To save you some time though, I can almost guarantee you that
they are not talking about you. You are probably the fartherest
thing from being on their minds.

No, I was just explaining how things are in the 90's, and you seem to
think for some reason that I was talking about the 40's, although I
don't know how you got that idea.

> Haven't done any CB work for at least 5 or so years, but when I did,
> every day and nite I NEVER used a handle and ALWAYS used my name as did

Yeah, the difference is that on SSB people use 3 digit numbers instead
of "handles" but no one uses their name.

> to keep it QRP. I will suggest that never hearing anyone use their
> real name on CB can only mean you only worked AM frequencys where
> handles were a major part of the fun of being there. Tell you what tho,

Since you can hear EVERY state on SSB CB, we both know that people don't
use names, but rather 3 digit numbers.

>
> BTW, Hams have and use Call Signs right up to the time they feel like
> raising hell, then they very smartly drop them. Wouldn't you?

I hear the opposite problem, people use their call signs TOO often.
They still think that you have to identify with the station your are
talking to along with your own call sign, which changed a long time ago,
but no one wants to keep up to date with rule changes. If someone
wouldn't use their call sign, no one would talk to them so how could
they "raise hell"?? Hey, I'm just telling you what it's like in the
midwest, sorry you live in an area with rude Hams. I hear our Hamfest
prices are lowest in the country as well.

The REAL funny thing, if you want a good laugh, is how the radio got
submerged in water in the first place!! And yes, the electret mics are
sealed in a metal can except for the small hole on top which is small
enough for a water drop to sit on top with out going in. (this is of
course assuming it is not contained in an HT which gives it even MORE
protection)

That's right. Folks seem surprised to learn that I run 20 Meter CW from my automobile (not in town, but out on the Interstate). They don't understand that it is just like a voice conversation because I copy in my head.

Actually, one builds a "vocabulary", just as when learning a language. This process is not difficult, and I encourage CW ops to give it a try. (You already know "the" and your call sign).

> I know who Masa is and I know the call used by the
>enlightened one is from the 5 Call Zone where the use of BOY is commonly
>used to put down others not deemed to be of much value

K5PF:
Just a quick update. Prior to 1980, Amateur call signs indicated geographic locations with about 80% accuracy. Today, hams can keep their original call signs when moving to a new area.

Example. I live in North Carolina. Was born in NC, in fact. But I happened to be working in Texas when the FCC threw open a vanity call sign program for 90 days for all Extras. (This was in the 1970's). I grabbed a call with my initials, and I have been able to keep it, regardless of where I live.

The change in the "gotta get a new call sign when you move" rule was quite controversial at the time. One group said it would destroy the existing system of estimating where someone is by the number in the call (when chasing WAS, for example). Others said, "A call sign is like your name---it is your identification in the hobby. You should be able to keep it." Discussions were as heated as the Code/NoCode issue is today.

Guess what! The hobby survived. There HAS been a problem for DX chasers working pile-ups. But the remainder of the hobby has been relatively unaffected.

This might have been true at one time, but the radio landscape has changed, Jeffy. Freebanders are quite a bit "braver" and several times more powerful than they used to be. Before, most of them would tend to be a bit afraid of the all-knowing HAMBOS and their callsigns. But these days, a freebander is just as likely to crank up the amp a bit and tell you what you can do with your Iambic key. I've heard it happen several times on the lower end of 28Mhz. Remember, most of today's serious outbanders are running high-end ham equipment. Their radios are every bit as capable as yours and, in many cases, their available power outputs exceed the maximum permitted on the ham bands. This is especially true in the Novice segments, where maximum output is limited to 200 watts. Most freebanders have more than this in their vehicles.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

K5PF writes:
I concur. In November, 1996, I contacted the FCC's monitoring station in Columbia, MD (operator JOHN, a former Navy RO) and received the same response. (In my conversation, we did not discuss the legality of using PHONE in the CW subband.)

The Amateur practice of transmitting right on top of intruders has proved to be extremely effective. I hear a phone station occasionally who seems to be very reserved (and who seems to be very well-equipped because he answers in FM, SSB, or AM--whatever mode the prirates are using....and the signal is extremely strong).

The voice transmissions are made by a professional sounding male with a deep voice, and go something like this:

May I have your attention, please.
You are transmitting on frequencies
reserved for international data communication
and radio beacons.

You should not be transmitting on this frequency
without permission from your government. If you
have questions concerning your authority to operate
on this radio channel, please contact the Federal
Communications Commission for more informationnnnnn.

The transmission is repeated, and then concludes with the date and time, such as:
14 February 1998. 17 hours 25 minutes,
Coordinated Universial Time.

There is a Spanish version of this message which urges pirates to "contact the Telecommunications Ministry of your government" for more information.

The source of the voice transmissions is unknown. The announcer's voice is very precise and conveys a sense of authority. He sounds like God, Himself! I suspect this is not actually a government station, but I doubt if the FCC would object to this activity. The God-like voice never engages in two-way conversations or arguements with the pirates.

This, and RTTY, have been very effective. Remember, the goal of the pirates is to seek out a "clear" channel. Once they find that a channel is "in use", or if they have drifted into the Ham band by mistake, they move immediately. As indicated by Jeff's post, if they go to another Ham frequency, they are followed.

However, (and this is important), once they leave the ham bands--even if they just slip below 28.0MHz into the so-called free band, do not follow them. This is not the Amateurs' concern.

K5PF write:
A similar system works for me. This is no big deal--we do it every summer in hundreds of locations around the United States, during an exercise called Field Day. The specific purpose of Field Day (besides having a lot of fun) is to demonstrate emergency prepardness.

1. There is only a limited time before the contest begins for erecting antennas, etc.

2. Extra points are given for running emergency power.

3. [deleted] (I was going to mention that CW contacts count double, but I decided that was off subject).

In my case, I carry a Dentron Ant. Tunner so I can run on two bands with one antenna, during disasters. In North Carolina, hams are a vital part of the State Emergency Response Team (SERT). Several times in recent years, I have been asked to get the ham team and equipment together quickly and meet at the National Guard HeliPort in Raleigh to be transported to a disaster scene. The chopper drops us off wherever needed. We can set up communications all over a town in half an hour using VHF FM Simplex, and we use HF SSB/CW for comms back to the State Emergency Operations Center.

[comment deleted] (I was gonna mention that the Governor himself sometimes talks to disaster scenes on FM and SSB, but the last time I mentioned that over in rec.radio.cb, I got flammed by idots who pointed out that the Governor probably doesn't have a ham license. Hellllllo!) We use CW for point to point traffic. It is very precise. We have found that the CW operators can rival or exceed the speed of handling messages by SSB. The difference seems to be more

disciplined operating procedure, along with very few requests for repeats or "fills".

CW also is less prone to interference, which is important because during an emergency, we do not control the operating environment. We often have static from thunderstorms, intermodulation problems, and ignition from nearby generators at Red Cross feeding stations, etc. With narrow bandwidths and DSP, we can keep communicating, in spite of the obstacles.

To the fine Amateurs reading this newsgroup: If you have not tried Field Day, or have not yet been involved in Emergency operations training, I encourage you to do so. There is a great source of satisfaction in using our hobby to help others. I view it as a way to pay back society for the privl. of having ham radio for my personal enjoyment.

You also will meet a lot of great folks with the Red Cross, Baptist Relief Organization, National Guard, and law enforcement. We provide a needed service in many situations. Hams, for example, run all the communications for the Red Cross during the State Fair---and there are some INTERESTING situations that come across the channel!!!!!! We go to towns hit by tornados, hurricane-devastated areas, and participate in nuclear plant evacuaton drills and in searches for lost children. Check around in your state. Similar opportunities exist. And we'll see ya on FD this year, I hope! (I'm a 40 Meter CW opr at W4DW.)

73,
K5PF

Yeah, but he probably didn't realized it. I'm sure he's scratching
his head still trying to understand the analogy.

Hi PF, At NMO, our xmtr site, atop Mount Kaala in the Waianae mountains,
was a good 10 miles from our rcvr site in Whitmore Village, just outside
of Wahiawa (above the North Shore of Oahu). That's the only way we could
run duplex. We ran CW on 500 kc, and 4,6,8,12,16, and 22 Mc, and SSB
and RTTY also on the above (except 500, of course). It would have been
impossible to run duplex on all those frequencies if the xmtrs had been
any closer. Of course, our 20 Collins 651S1 rcvrs wouldn't have smoked
even if the xmtrs were sitting next door.

Not envy, ED, just sheer boredom in having to read Geezerson's continually
posts as how HIS military career is of such great importance to the discussion
and how any others military service is absolutely less than significant to the
same. It seems that Geezerson's service did nothing to contribute to
anythijng, as it was served in that war torn theater now as Tokyo during the
post Korean conflict era. I would suggest scanning DejaNews and you'll see.
Geezerson's continually referrals to a 1950's military service, he insistance
that his 1974 patent, etc make him the very essence of technological knowledeg
when it comes to the discussion. In that regard, I'd take Carl's refernces
over the Geezerson's, for the simple reason that I know Carl's employer and
they usually don't hire slouch's (sic).

Please help me to identify plastic SO SMD with the following package markings:

Marking No. of Pins

T1 6
LB40 5
LA45 4
LA36 4
LB33 5
C5L 4
169 5
M3s 6
C5 5
AMs 4
ANs 4
C2 3

These parts could be RF transistors, diodes or MMICs.

The most likely suppliers of these parts are Panasonic, NEC, Toshiba, Sanyo, HP, Mitsubishi, Philips and Siemens. Unfortunately, I don't have catalogs for some of these suppliers.

I would appreciate any help you can give me.

Thanks,

Jean-Guy Michaud, VE3SKJ

Hi Jeremiah -- nets are a gathering of on-the-air hams in a mutual endeavor, be it swapping radios, emergency preparedness, ham help, Morse code practice, world war II vets etc.

Usually a designated net control directs the activity and message/discussion flow. Initially a checkin procedure is conducted to list the participants, but not always e.g., swap nets.

Here in San Diego the Palomar ARC runs several nets as follows:

National Traffic System -- handles messages world wide for hams, servicemen etc.

Northern District ARES -- Emergency communications net -- to pass emergency preparedness news and practice procedures

Sailor's Net --- all about boating for hams in San Diego -- share news, products etc.

This Week In San Diego -- Ham radio news including Ham Radio On-line News Program

Morse Code -- practice on the air VHF code practice

Microwave Net -- tech discussions of the uwave world, homebrew projects

Off-Road Net for hams into 4 wheelers

YL/XYL Net -- Ladies only net

Ham Help Net --- experts and beginners get together for tech Q & A

Hiker's Net --- Hams who hike --- organizes trips

King Henry's Facetious Net --- fun story telling net

Also in the area is swap nets -- get together to sell, buy, swap Ham Radio gear

Another is a trivia net --- like trivia pursuit

HF nets include -- DX nets, worked all states, antique radio collectors
etc.

For HF Nets -- see URL:
http://pw2.netcom.com/~ac6v/pagep.html
Includes nets for:
BOAT ANCHORS
COLLINS
COUNTY HUNTERS
DX
EMERGENCY
SWAP
IOTA
MARITIME
MARS
NTS
QRP
WAS

Happy Netting
Rod in San Diego

Some more jokes for the great people of this NG.
Happy Valentine's Day!!

SHE WAS SO BLONDE ....

- she thought TuPac Shakur was a jewish holiday

- she sent me a fax with a stamp on it

- she thought a quarterback was a refund

- she tried to put M&M's in alphabetical order

- she thought Boyz II Men was a daycare center

- she thought Meow Mix was a record for cats

- under "education" on her job application,
she put "Hooked On Phonics"

- she tried to drown a fish

- she tripped over a cordless phone

- she spent 20 minutes looking at the
orange juice box because it said "concentrate"

- she put lipsick on her forehead because
she wanted to make up her mind

- she got stabbed in a shoot-out

- she told me to meet her at the corner of "WALK" and "DON'T WALK"

- she sat on the TV and watched the couch

- she got locked in a grocery store and starved to death

- if you gave her a penny for intelligence, you'd get change back

- they had to burn the school down to get her out of third grade

- she took a ruler to bed to see how long she slept

- at the bottom of the application where it says "sign here".. she
put "Sagittarius"

- she asked for a price check at the Dollar Store

- it takes her two hours to watch 60 Minutes

- if she spoke her mind, she'd probably be speechless

- she studied for a blood test - and failed

- she thought she needed a token to get on Soul Train

- she sold the car for gas money

- when she saw the "NC-17" (under 17 not admitted), she went home and got 16 friends

- when she heard that 90% of all crimes occur around the home, she moved

- she thinks Taco Bell is where you pay your phone bill

- when she missed the 44 bus, she took the 22 bus twice instead

- when she took you to the airport and saw a sign that said "Airport Left" she turned around and went home

---

...and one more good Clinton joke from Phil H. (Thanks, Phil!)

Why doesn't Clinton play his Sax anymore?

He's too busy with his whoreMonica.

This has been explained to you before in great detail but you still don't get it, and you never will until you do it yourself.
The reason you "don't know how they are going to do it" is because you don't listen very well. People have presented lots of examples of how CW, while not perfect, can enhance a DX contact where two different languages are spoken.

Why not get on the air and make some contacts, work some DX, find out for yourself how it's done. Perhaps if you come back to the news group with some credibility people will actually consider your arguments instead of just laughing at you, and responding to your posts for amusment only.

Message-ID: <19980214165301.LAA13631@ladder03.news.aol.com>
Source record: 178411

HAMS TO CHASE "FOXES" IN LATE APRIL

"CQ VHF" National Foxhunting Weekend
April 25-26, 1998

A ham radio magazine is urging amateur radio clubs and operators across America to go "foxhunting" on the last weekend in April. But the bushy-tailed animals have nothing to fear. Hams, after all, are not hounds, and in ham radio lingo, a "foxhunt" is one of several names for Amateur Radio Direction Finding (ARDF), a competition to locate a hidden radio transmitter.

"CQ VHF" magazine has designated the last weekend in April as the "CQ VHF" National Foxhunting Weekend," and is encouraging ham operators and radio clubs to conduct a hidden transmitter hunt at that time. Unlike traditional ham radio contests, there are no standardized rules, log sheets or reporting forms.

"It's not a national contest, and there are no set rules," writes radio foxhunting veteran Joe Moell K0OV in an article announcing the event in the upcoming April issue of "CQ VHF". "It's just a time for clubs, schools and Scout groups to try this exciting radiosport." Moell notes that participation is not limited to licensed hams. "There's no license requirement to receive, so everyone can participate."

On-air competition is a ham radio tradition dating back nearly to the birth of the hobby, and foxhunting has been part of that tradition for at least 60 years. Foxhunting may be done by car or on foot, and the magazine is encouraging ham groups to use either one or both during the National Foxhunting Weekend. And there's more than a fun day of friendly competition involved.

"Foxhunting is certainly fun and a competitive challenge," says "CQ VHF" Editor Rich Moseson W2VU, "but it also teaches important direction-finding skills that may be called upon in searching for a downed airplane or lost hiker using an Emergency Locator Transmitter, or for tracking down sources of interference."

"Transmitter hunting belongs in the mainstream of amateur radio," adds Moell. "Ham RDF can be used for public service and to save lives."

The "CQ VHF" National Foxhunting Weekend coincides with efforts by other ham radio groups to promote the sport. The Portland, Oregon, based Friendship Amateur Radio Society has been working to bring international-style, on-foot, foxhunting -- already popular in Europe and Asia -- to North America. And in January, the American Radio Relay League (the largest U.S. ham radio organization) endorsed those efforts and approved the appointment of a national ARRL ARDF Coordinator to encourage activity.

Groups participating in the "CQ VHF" National Foxhunting Weekend are encouraged to send reports of their activity directly to Joe Moell, K0OV, at P.O. Box 2508, Fullerton, CA 92837, or via e-mail to <homingin@aol.com>. E-mail reports may also be sent to the magazine at <cqvhf@aol.com>.

"CQ VHF" is a monthly magazine dedicated to "Ham Radio Above 50 MHz." It is published by CQ Communications, Inc., which also publishes "CQ Amateur Radio," "Popular Communications," "Communications Quarterly," "CQ Contest," "Electronic Servicing and Technology," CQ Books and the CQ Video Library. CQ Communications is based in Hicksville, New York.

Oh. so it costs MORE for the FCC record to reflect that one pased a morse code test in addition to his written test?
WRONG!!!
All the FCC does with the form 610 is enter the license class data that the VEC sends in on the form 610 then and file the 610---the form 610 shows what elements you passed-at most one additional key stroke for a keypunch operator--if they even enter the information in that detail (can't say for certain on that)-- but a single keystroke entry is not a budget item I'm afraid...the remainder of the form will be handled whether code is an element or not
Dave, you're grasping at straws.

>
>Larry ve3fxq

Larry, the FCC limits *baud* to 300, IE 300 modulation symbols per second. That is not necessarily the same thing as the data rate, IE bits per second. Clover II is an example. It runs at 31.5 baud, but offers a BPS up to 750. It does that by using symbol overloading, IE a transmission symbol can represent more than one bit. Phone modem techology does the same thing. Above 300 bps, symbol overloading is used to achieve the higher data rates.

Now the problem is the HF channel. It has many impairments not shared with the telco channel. Selective fading makes use of more than 50 baud a real problem. And the often poor SNR and the very restrictive occupied bandwidth limits imposed by the FCC restricts the degree of symbol overloading which can practically be used. This is a result of the Shannon capacity limit. We can get more capacity, but it costs us either in terms of requiring a higher SNR or in terms of requiring a larger occupied bandwidth.

The real FCC imposed bottleneck at HF is the 500 Hz occupied bandwidth limit for automatic operation. If we were allowed to use a larger occupied bandwidth, we could increase capacity and/or lower the SNR required. We'd still want to keep baud under 50 unless there was absolutely no selective fading occurring on the channel. This is one of the reasons that HF packet performs so poorly. It tries to use 300 baud. That's way too high for a fading channel to support. The decision to attempt to use Bell 103 telco technology on the HF channel was totally inappropriate.

On the telco lines, there is virtually no fading, and the SNR is generally very high (typically better than 40 db). So very heavy symbol overloading can be used on the 600 baud transmitted in the 3 kHz available bandwidth. This allows a bps up to 56 kb.

On the radio channel, we rarely have such good SNR so we need to be able to use a larger occupied bandwidth instead. 56 kbps by radio is normally done at VHF+ with moderately overloaded symbols at 14.4 kbaud using a 70 kHz bandwidth. That lets us work at a SNR of about 13 db.

Now normally a 70 kHz wide signal 13 db above the noise on an amateur HF band would be a real problem for other users. But if we were allowed to

spread it even more, using SS techniques, we can drop its level down *under* the perceived noise floor of the narrowband operators. So we could have high capacity without adversely affecting the NB users, and while dodging the propagation impairments of the HF channel.

Of course we aren't going to be able to use 14.4 kbaud over HF radio channels. Selective fading would kill us. But we can use much more aggressive symbol overloading in a large occupied spreading bandwidth. So HF data rates of 9.6 kbps or slightly better, are entirely feasible at a SNR that is virtually undetectable by NB users. The information theory for this is rock solid, and the military has demonstrated it in practice.

So for *real* capacity improvement at HF, we simply *must* be allowed to operate spread spectrum. And it is technically feasible to do this without adversely impacting NB users. But the ARRL has adamently fought this. They've even fought it at lower VHF where the inherent sharing ability of SS would be of great value. SS is restricted to UHF where its sharing ability is not needed due to the sparse occupancy, and where the channel impairments against which it is valuable are much less severe. So practically no one in the amateur community has bothered to adopt SS up there since it carries few real advantages against that benign gaussian noise channel. Plain old high baud FSK works just fine.

Incidently, that's why I think the current push by TAPR for 900 MHz SS radios is going to go nowhere. It doesn't address any real problem that we can't solve more easily in other ways up there. But if SS was allowed on HF, the benefits would be very large indeed. The nature of the HF RF channel, and the level of sharing needed, makes SS the only suitable technique for dramatically improving performance on those frequencies.

You've probably already read some good posted explanations. For a particular net, the purpose is usually given at net opening time, when the net control opens the net and calls for checkins. For more information, a good way is to wait till the net closes and then call the net control or one of the other active hams on the net while they're still on the radio (they often hang around for a bit chatting and taking care of some left over business), and ask!

Why waste good meat? A .22 through the head is the best
way to shoot ducks. But a baited stick on a string works
even better. Take a bit of bamboo, tie a string to it and a
brick to the other end of the string, curl the bamboo tight
with steam, bury it in a dough ball, and toss in shallow
water. When the duck eats it, the bamboo straightens
back out in his gullet, and there he is when you come
back to retrieve your dinner.

Tim, cannot those same "enhancements" work on SSB or with other modes?

While there are a lot of people who do not listen well (newsgroups are full of them, some days <grin>) it is also true that CW/Morse is credited with abilities that are not the results of CW or Morse, but are the results of people working around the limitations of the mode. Those same "work arounds" are just as valid and useful in other modes.

Go right on defending CW and Morse use. Defend the current requirements, if you wish (and can). But please note that it is NOT the CW or Morse that is enhancing the contacts -- it is a collection of shortcuts which also can be used on other modes.

CW/Morse, BY ITSELF, cannot enhance communications when two different languages are spoken.

I really hate spitting but here goes. I was wondering how it could be possible that someone of you obvious and wonderous talents could not figure out that a hand held unit, weather hanging from a saddle horn or sitting on a car seat must be running on batterys. Obviously you do know but had to show you also know that a byproduct from hay going thru a horse gives us methane. Thats good, but at the time I focused more on you not coming up with "batterys".

On that wide a split, you will need to retune...MAYBE able to get it
to cover both freqs....but depends on the tuning range of the
radio....

I got a GE Delta to cover 48 and 52 MHz but the rcvr was now at .7uv
up from .2uv when tuned on one channel....

PS dont post non-for sale/swap msgs in the SWAP area please!

Then you obviously wont be one of those worrying that the 7/11 is closed
for the winter so you can't buy a battery for a rig.

BTW Mark, could you adopt me for a summer or so? I could use some of
the life you described. Would you be in Colorado? I was all set to go
Elk hunting there but my wife who was expecting, waited for the season
to end before delivering. Carried that girl 14 months I swear.

One more question, are you hooked up with any organized emergency Comm Crews in your area? I once helped a guy, No ticket, but wanted to help any way, set up a brand new RV for an emergency vehicle. We made it ready to accomodate equipment from pre-determined Hams to include any kind of power source needed at the time. That RV was on standby in S. Cal for many years to be used when needed. He never that I know of got a ticket, he just liked being around all that action.

Your over simplifying again by stating testing,records storage,
administrative cost. Implementation of Treaty and CEPT agreements,settlement
of disputes arising from the code Requirements and other issues are covered
by the $6.31 and the pitiful amount we pay for license renewal and issue.
There are dozens of other hidden cost, are you saying they don't exist. We
pay only a few dollars for our license while the cost of every license
issued by the government rises yearly. A restructure of our license Classes
and other changes would greatly reduce the administrative burden and cost of
Amateur Radio to the Government. Personally I don't see how the Government
has gone this long without passing some of the cost back to Amateur Radio in
the form of higher fees for our licenses and other services. This may be a

very unpopular sentiment but it is an issue we will have to face sooner or later.The Code Requirements are only part of the changes we may see because of rising cost and the precarious position the FCC finds itself in today. Like it or not Dick we will see major changes in the future. I would like to see us make those changes rather than have them imposed on us by an outside Government agency.

Everybody is different Jeff and their abilities lie in many varied places. Language for some is impossible. Not to drag this out but give me your best guess what is going on in this situation; I speak English as a native language, but being from New Mexico, I learned a lot of Spanish. I have no problem going from one to the other. The problem

comes when I went to Korea and tryed to learn some of that. For some reason when I tryed to go from English to Korean, my mind went to Spanish first. It was hell the first year and a little better the second but still a real pain.

> of the processes.
>
> It's clear that you'll defend Masa no matter how much of a pest he

> no-code camp.

Masa may be a pest and to be honest, at times I'm not sure what side he's on, but my defense of Masa has nothing to do with the Code issue. Every body here is on one side or the other but a little civility would be nice. Look, we all know this will never make every one happy if and when any thing changes, and there are real issues on both sides, but putting folks down by personal attacks for their beliefs or how they communicate them is wrong and we all know it.

>
> Masa is "boy", both mentally and emotionally. That has nothing to do with
> any language barrier.

Jeff, he may be _A_ boy, but he is not BOY in the context originaly posted here and that term has no place here or anyplace else. BTW Jeff, you have to give the guy credit for persistency, and if he is the same re Morse, he will be at 12wpm pretty soon and then he can really learn Proper English on HF. I assume you all accept learning to be in all areas and not just increasing the speed of your OOK.

There was an Army Vietnamese Language School located on one of my Posts in the states and I was exposed to some of it. If you learned it Jeff, good on you, it sure sounded tough to me.

A very <yawn> funny joke.

Now this, on the other hand, might be funny....

Subject: Circumstantial Evidence

A farmer was called to serve on jury duty. During the questioning of prospective jurers the prosecuting attorney asked the farmer if he could convict someone on circumstantial evidence. The farmer responded, "No way in hell could I do that!!". The attornery asked why he was so adamant in his answer. He replied that he once had a very bad experience with circumstantial evidence. The attorney asked him to explain.

"Well sir", the farmer began, "I was out in the barn milking ole' Bessie one hot day and as I was milking her she kicked over the milk pail with her right front foot. The milk soaked my overalls and underwear, so I took them off, rinsed them out in the water trough and hung them out to dry.

Then, I got a piece of rope and tied her right foot to the floor. I sat back down and starting milking again and the silly cow kicked over the pail with her left front foot. So I tied that one down to the floor as well. She then proceeded to kick over the pail with each of her back feet so I tied both of them to the floor...

Well, I thought I things under control until she whipped her tail around and slapped me right in the face. Very annoyed at her antics, I moved my stool behind her, stood up on it, and as I was in the process of tying her tail to one of the rafters, wearing nothing but my T-Shirt and boots, my wife walked into the barn!! .....No Sir!! I do not believe in Circumstantial Evidence

I'll bet you'd even find licensed hams among the freebanders. Who's to say
that they wouldn't have just taken a test to get a callsign so that they
could obtain equipment more easily? Some dealers and some hams are picky
about who they sell their equipment to. A callsign is just a pass key to
to them.

The internet and publicly posted electronic-based text is a tough and tricky
area for evidence as far as libel suits. Even though a callsign is attached,
do you *really* know for sure that person is the one who wrote the message?
Do you know how easy it would be for them to say, "I never wrote that.
Someone must have hacked my account." The only thing you might be able to
do is have a lawyer make a threatening phone call. Sometimes that's enough
to scare people. Either that or have the lawyer threaten the ISP about an
account holder making libelous posts. Further action may not be necessary.

If the ISP is anything like Mindspring, they'll just say something
like, "We believe in preserving free speech. As long as no laws are
being broken....etc." This, of course, depends on the ISP.

Besides, with the software available today, it's easier than ever to filter
out postings you do not want to read. There's no excuse to go running to
an ISP to complain when you can do the work yourself. And I, for one,
have had it with the days of Fidonet and iron-fisted, power hungry,
moderators who "ban" people whenever they damn well feel like it.

That's fair Steve. If you don't like the military then you don't. But
it would be a mistake to dismiss what they did for Amature Radio.

Having no idea how old you are, I will insult your intel by telling you
of all the WWII Comm Equipment made avail to people to play with.
That's a lie, I will only mention a few. ARC family radios from
aircraft many hams turned into pretty good stations. Even the Propeller
Pitch control motors were used to rotate beam ant. Dynamotors allowed
early mobil use of military radio equip. Many folks got their first
taste of Communicating without a phone line in the Military and went on
from there to Hamdom where they preserved and added to the hobby for
others to use.

I'm not one of those flag wavers that tells you I saved your country or your way of life, but I do know what I and others have done and I need nothing from you nor others with your attitude regarding ex military. It is not unusual to find folks bashing the military and it usually stems from a bad experience by that person. I don't know if that fits you and Its not pertinent, but what I do or say may be tempered by 20+ years of military duty, and if you have a problem with me, it's me, not the military you should be addressing.

You know something Steve, I don't know if Len A. knows Code or not, I do know he doesn't think it belongs in any testing for a Ham ticket to HF. Ask me if I know code and I will have to say no because I haven't used it for 30 years and I don't think it belongs in testing. My father didn't and my Mother didn't, even tho she did like it.

I have been around Ham Radio all my life and I have an opinion for which I currently don't need a license for and I will give it when I feel like it. I have a problem when someone comes here and begins to select what is pertinent or not pertinent to the discussion. You tell me what you think and I will tell you why and when I dissagree, but when I do dissagree, it's not because you are white, male, single, left handed, curley haired, doctor, cab driver or ex military, it will be because what you have offered is not agreeable to me. No more and no less.

If that is not ok with you tell me now and I will refrain from reading any more posts by you. I wouldn't wish to offend you by responding, I am MILITARY you know.

>I'll bet you'd even find licensed hams among the freebanders. Who's to say

I find it strange that a ham would choose to run out-of-band when
he has such a wide variety of legal frequencies to choose from
(160, 80, 40, 30, 20, 17, 15, 12, and 10m).

As you said, Case, these folks are firstly CBers who happen
to have obtained a ham license, a very different (and lessor)
catagory from hams with no ties to illegal CB operation.

You can find some photos of a most unusual VHF transmitter
on-line in the newsgroup:
alt.binaries.pictures.radio

This week, we have a model TUO-1 transmitter picture!
It came from W5JI who provides the following description.

If your ISP does not provide the newsgroup:
alt.binaries.pictures.radio

ASK them to start carrying it! You will be glad. There are
a number of recent postings there with pictures of radios
that you will enjoy seeing!

Date sent: Mon, 9 Feb 1998 21:18:56 -0600 (CST)
To: baswaplist@foothill.net
From: Jim Coe W5JI <jcoe@brightok.net>
Subject: FS 1946 TUO-1 exciter

I have two exciter/transmitters surplus to my needs.
They are identical and are Type TUO-1 VHF by Air
Associates of Los Angeles circa 1946. They were
manufactured for the old Civil Aeronautics Administration
under contract CCA 25300 Order No. 47-2926

I call them exciter/transmitters because they were
meant to be exciters for high powered amps, but they
can actually be used as standalone transmitters if you
want.

They consist of an 807 xtal osc/tripler driving an
807 first doubler which then drives an 826 second
doubler followed by an 826 third doubler/output stage.
The units are 12"h x 13"d x 31" w and are all
aluminum construction. This unit was the exciter stage
for the TUO-1 transmitter which looks like a BC-610
on steriods.

The unit is designed for 108-118 Mhz but could easily be
modified for 144 mHz or even 50 mHz. I picked them up for
parts but they are so well made, I have not had the heart
to break them down. The time has come to use the parts or
sell the complete units to someone who will use them.

I have an original manual for the TUO-1 that I will
include (If the units are sold singly, one buyer will

get a copy.................)

The units are big, but not very heavy so I'm willing
to ship them, but a buyer within a 200 mile radius
of Davis, OK, may have the edge since I'm willing to
deliver them........I'd like $ 75.00 each or $135.00
for the pair plus shipping........I'm sure the list
members will let me know if I'm off base.

I'll answer questions by email...off the list...please!

Thanks es 73's.....
Jim Coe W5JI

W�rzburger Riese 500MHz radar under reconstruction in Kristiansand

---

"Kristiansand Defence Historic Society " has transported the 7,5m radar antenna from the old site at Brattaasen/Flekker�y to the mainland [WW locator JO38XC] where we plan to install it at the Kanonmuseum where whe have one of the 38cm guns and one kasematte for another gun which was not ready. A 10 men group needed two week-ends for the transport. We have another (but blown) dish at another site on another island in this area, but this was blown in 1960 and only fragments may be used. The first dish was blown down in 1950 and fell down 30m along the hill, and we had a hard job to divide it into three parts and transport it in two wee-ends. One problem is that the Germans made so narrow roads, and all the trees, hi
What we need particularly is measures for the mounting of the dish, we have to build several devices from scratch, but mainly use the dish as it is - with some repair. Since this museum is only 1km from home, 2km to drive, it would be interesting if I could use it 70cm activity contests....
I have a book written by PA0AOB Arthur Bauer have written on such radars and also some different German books available from different German sources, but none of them shows good details of construction.

That depends on what you consider "criminal". From what you've implied
above, it's *anyone* who knowingly breaks *any* law. Period. Does
the name Rosa Parks mean anything to you?

>But then again, coming from people who believe in "pinning coax" and
>"antenna lassoing" are legitimate ways to get your nemesis to shut up,

A fatal flaw in the above is the neglection of "frequency." Taking a
single hotel towel, stealing, is quite a contrast to taking a hotel towel
as often as possible - sign of kleptomania. Same with radio comms;
transmitting once using too much power, while illegal, is forgivable,
but transmitting daily with that 5kW amp is criminal - the outlaw
should have his station confiscated, and be placed in jail.

>in other words Do want you want just do as they say!

No wonder folks think so lowly of those holding AOL accounts.

Hope you get caught!

Your comments are exactly 100% correctomente as it is. You don't have
to be an old timer either as the rate of change can be quantified daily.

I think the major problem here is that notwithstanding the change in our
overall attitudes, some on this NG would have you believe that the only
individuals responsible are non coded or CBers, and they claim these
guys are also the ones causing problems on HF. They could be right and
I won't suggest they aren't but REALLY? Face it, if they are CBers or
No Coders on HF being Rowdy, how many must there be that just quietly do
their thing on your hallowed HF freqs daily. If so then why would any
one bother to question requirments to gain access to HF when they can
just go there and begin operating sans ticket? The answere is that most
see a real need to change a reg and they are simpley debateing that
possible change. But to hold up the torch and indignately proclaim that
those "NoCoders and CBers" are ruining our freqencies is a little weak.

Really? You then be lucky Doc. Seems to me that most VHF operators
from most areas all claim the same unfortunate problems with unruly
folks messing up the Communication and usually as pertains to repeater
operation.

My reference to the 40s was only to form a reference as we all know
things have gotten much worse and especialy in the 90s. Another way to
say it would be "We had problems then and never did anything to change
it but now we can at least blame it on No Coders and CBers", when we all
know there are licensed Hams who do in fact cause greif on the HF bands.

>

Sorry Doc, but even tho on SSB people had and used call ids much as Hams
do, they also, (most) use a name. You on VHF don't just keep refering
to N7abc as N7abc while conversing with him/her, you use their name. As
a matter of fact if the CBer belonged to a particular Radio Club, his Id
and name was listed much like your Call Book. I will admit to this list

being a little more guarded.

>
> > to keep it QRP. I will suggest that never hearing anyone use their

> > did you can bet they used real names.
>
> Since you can hear EVERY state on SSB CB, we both know that people don't
> use names, but rather 3 digit numbers.

Nope Doc, there were three or four states I never talked to. You know
the problem if you ever tryed to WAS on 10 meters. And again most
SSBers had Call Ids from some club or another they still acknowleged
each other my name. At least the circles I ran in did. And that
included most of the States and many Countrys.

I really don't know what our problem is here Doc. We both know folks
from any walk can and do get rowdy at times and certainly more on CB
because there is simply more of them. I would ask why we worry so much
who is doing it rather that what can be done to stop it. Yes I know
your idea of Calls and Names but my 8yr old Grandaughter can make up a
name and call. You don't know it but I am very much aligned with your
thoughts and concerns, I guess I only dissagree with a minor point and
it is not worth the bandwidth to pursue it.

Cheers and hang in there Doc.

> carreers in the public safety field. If the saving of 3 lives is not considered to be
> an adequate "emergency", how many would it take?

A few days ago a feller tryed to drive across a flooded canyon road. He
didn't make it. He died, and I think that was an emergency, but sooo
very isolated. He is just as dead and summoning every CW operator in
the world would not help him nor was it needed for the smart ones that
did not drive into the raging water.

You didn't tell us the details of the emergency nor even that CW played
any part in the salvation of the lives, but you did I,m sure, hope we
would assume so. I for one am not aware of this incident but am anxious
to hear about it in more detail, and if 3 lives were saved, I say good
on what ever allowed it to happen, weather that be CW or a long stick.

Thanks for the help Dick.

I have a device called a Digital Frequency Display, which has no manufacturer ID on it anyplace. I picked it up at a yard sale and hoped to use it with my Kenwood TS-520 transceiver, but can't figure out how. The transceiver manual is no help.

It has three buttons on top marked "PWR", "MODE", & "Hzx100". It has a selecter knob on the left front with 3.5 through 29.1 bands marked on it, plus WWV. There are also led's to indicate upper and lower sideband. Near the knob is a square with a red "S" in it...I guess that is a logo for the manufacturer.

It has a LED type frequency display, and above that is an apparent model #: DD-1K. It has a heat-sinked power transistor on the rear, and the it has one phono jack for input or output.

Does anyone recognize this?

Why is this thread on "rec.radio.shortwave"? It really belongs on
"rec.radio.amateur.misc" or "rec.radio.amateur.policy".

Nope. We live in a civilized society. That means we have rules we must
obey. If people decide to start selectively obeying the rules, we end up
with anarchy.

>I've heard the same and worse on 75 meters, including death threats.
>Do you consider this to be civilized?

Nope. Death Threats? Better e-mail those callsigns to Carl Stevenson.
He can attach one of them to the fake "death threat emails" he sends
himself on a regular basis.

Not all that isloated; L.A. County now has rapid-water rescue teams
created exclusively to yank folks out of flooded areas.

(Why on earth would you cross-post your remarks to the non-amateur NG
rec.radio.shortwave? Taking lessons from Masa?)

Hold on now, Ed...Nobody is saying the CBers are responsible for even most of our troubles, but it's a considered conclusion that those who are doing all the sad things are pretty well those who place litle value on ham radio or their part of it. If they cared at all about the impression they leave on observers they wouldn't show such disdain for everyone elses sensibilities. It' s a well established fact that CB is and long has, been contaminated with such trash. Almost any monitoring of Channel 19 will again demonstrate it.. And add to that, *all* the socalled Freebanders have no regard to legalities. If not so, would they thumb their noses at them? I know, there are a some of these people who have decided to become hams, learned theory and code and fully qualified for their ham licenses. I'm personally acquainted with some of them who turned out to be fine hams and assets to the hobby/service. *They* are not the problem, rather the element who has *always* had no regard for rules and can't be expected to change their stripes from black and white instantly upon issuance of a no-code, no-real-test ham license. The fact that the No-Code Agenda is working so hard at making this possible is a major problem facing us. We are already beset by far too many llicensed problem people. And one cannot assume that they are all properly tested and licensed, either. They seem to have little regard for, and much disdain for other hams and show it regularly.

I for one *don't* want to see ham radio degenerate further and further into a morass of the sort that long ago drove most normal, family type users from CB. Is it so farfetched to believe this is highly likely if those same people find that the can avail themselves of essentially effortless HF ham licenses, therby "legalizing" their nonsense? We already have to many "legalized" idiots.

Gutless?

A man went to a guts store to get some guts for dinner. He sees a sign
remarking on the quality of guts offered at this particular gut
store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

Bradymarker XC Plus Printer

The BradyMarker XC Plus Printer brings a new dimension of capability to portable wire marking, electronic component labeling, and general identification labeling.

The printer's optical registration system automatically aligns labels for printing -- eliminating wasted labels, decreasing set-up time, and assuring you of legends that are always printed on the label.

The two-line LCD screen lets you see legends before they're printed and displays menus to guide you through the printer's advanced features.

A dot matrix printer, together with Brady's Series 2000 ink ribbon, generates clear, crisp, permanent legends. And you get three character sizes to choose from: normal 12 characters per inch, 8 characters per inch for text that's legible at a distance, and 16 characters per inch for maximum information on your labels.

The BradyMarker XC Plus Printer can be used with pre-printed labels. Brady offers a selection of stock pre-printed labels designed for use in a wide variety of applications. We can also print custom labels with your logo, company name, or any other constant information you need.

The compact BradyMarker XC Plus Printer is ideal for labeling and marking wherever the job is. With the capacity to print more than 500 labels or markers per battery charge, it's perfect for on-site cable or wire marking.

Specifications

1.8K of dual battery-backed (non-volatile) RAM (32K optional)

2.Weight: 4.5 lbs. (unit only)

3.Nine-pin dot matrix printer

4.Eight lines per inch printing

5..0959 high characters

6.Two-line liquid crystal display (LCD)
with 24 characters per line

7.Operating temperature range: 40&#65533;F
to 100&#65533;F

8.UL-listed AC adapter (120V, 60Hz
input/12 VAC, 2A output)

9.FCC Class A approved

10.Prints up to 500 labels before recharging
is needed

Yep, you have pretty much summed it up Rambo, but notice what newsgroup they come towhen they want to know how to charge a lead acid battery with a 'battery eliminator' wall wart.
How many of your freebanding buddies helped you out Rambo?, I noticed more than one good explanation
when you posted this question a few weeks ago.
They seem to come trolling around when they want help 'converting' some ham gear
I suppose these are the same guys who will then tell us what we can do with our Iambic key eh?

You piss and moan when nobody helps the freebander convert a radio and in the same breath you tell
us how thier going to tell us to stick it when it comes to the lower part of 28Mhz. Hey Rambo, tell me how
to take the safety off this gun so I can shoot you with it.....Sheeesh, another mah roon to join the ranks of Cutie Boy...

14.1 and up is the international voice band, though it is now being
used more and more by packet, etc.

As you may also know, there is some contrivercy between quebec and the
rest of canada. Quebec wants to be a separate country. perhaps the
french station, assuming it is a ve2, is simply using his language on
the international part of 20 meters.

I read your message sometime ago and just read it again.
I am not saying that you are right or wrong but I would like to tell
you a story that happen to me.
I am guess on the time/day but I think it was the early 70's. To a
great extend things were somewhat the same as now, just the technology
has changed.
I used to go to a club meeting and felt very much out of place. My
station was not the same as the going stations. And most of the
fellows had money to burn, I was just about fresh out of college.
One day, as I enter the club room, I decided that I was going to
change my attitude. As the members came in I greeted them, rather
than expecting them to greet me.
I found a significant change in ther attitude toward me. Soon I
became quite a respected member of the club.
I got involved in club projects and showed them my talent without
pushing me out. Plus I allowed them to show me their talent.
Even though we came from different age groups, them about 20 years
older than I, we soon got along very well.
I am now at the age where you might call me one of the old f....ts.
But I am still trying to learn from the newer groups. I do have my
opinions but i try to listen to them as well as talik to them.
Some other the younger fellows are surprised at my willingness to
still learn.
I still consider amateur raido a two way street as long as they keep
it that way.

1696. Re: The value of cw

Newsgroup: rec.radio.amateur.misc

Hi Chip
Cw does have it's advantages. Unfortunately, it does take time to learn it. Those who say they learned it in a few weeks,,, well perhaps they did. It took me a few years to learn it, during the 60's and i didn't have very much technical support.

Take your time at learning it. There is no rush. In my opinion, once you have mastered it enough to be able to copy in the novice 80 meter band you should find it comes more and more easily. It is not easy to master but it does come with time.

I must admit I have not used cw since the early 70's but I suspect the cw contacts have not changed much. When I came home from high school, I went down stairs to my shack and turned on the tubed radios. I then went upstairs to get rid of my books etc. By the time I was back in the shack the radios were warmed up.

I was crystal controlled, transmitter, but still managed to do very well.

Body handling: Binary attachment payload not displayed: vcard.vcf

Anyone out there who owns or has experience with the RAC callbook
CD-ROM, why is it locking up my computers? On one Win95 machine the
system just freezes with the
HD and CD-ROM drive continuously running. On another Win95 machine, it
gave me a
"Error -Device attached is not running" message. Why, and how do I fix
this?
Thnxs and 73s de Jonathan ko6xs

1700. Want to learn about amateur radio, but....

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-15 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34e742cb.9511596@news.sprynet.com>
Source record: 178166

Just my opinion, but if you want to learn about amateur radio but
don't like the constant discussions about c. and noc... try some of
the other amateur newsgroups.
rec.radio.amateur......
Some of them may be overly technical but, to some degree, isn't that
what amateur radio is supposed to be... technical? Just my opinion.
Larry ve3fxq

I want to make a rf switch for my alarm system and have been
reading upon Radio stuff for weeks and just dont get it...
All it needs to do is turn on a switch within a range of 1 or 2 feet. I
dont know how to make a trnsmitter and reciever to do this or have any
idea as to how to avoid false triggering from other rf sources that may
be around the area.
If you know about radio stuff and can help me, please email me
at
ats@pe.net

Any help would be greatly appreciated!!!

SB DX @ WW $OPDX.344
Ohio/Penn DX Bulletin No. 344

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 344
BID: $OPDX.344
February 16, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K4UVT, N4RN, W4WX, WD4JNS, KZ8E, WZ8D, KJ9I, KP2BH, EA3NY, F5CCO, F6AJA & LNDX, G3HSR, G4BUE & DX News Sheet, GM4FDM, HB9BRM, IK5MDF, LU1DZ, RN6BN, SM5MX, VE3NQK, YS1FEA and ZS5BBO for the following DX information.

3C0, PAGALU ISLAND. The "DX News Sheet" reports that the proposed March multi-national DXpedition has been postponed due to the armed coup in Equatorial Guinea on January 20th.

3X, GUINEA. Steve, GOAEV, will be active from February 16 through March 31st, and possibly for six weeks after Easter while he is on a work assignment. Activity will be on CW/SSB, mainly on 10 and 6 meters and then the other bands. QSL via home call.

4S7, SRI LANKA. Mario, HB9BRM, will be active from here for about three months beginning March 3rd as 4S7BRG. QSL via bureau to HB9BRM or direct (Callbook 98).

7P8, LESOTHO. Look for John, KA3DBN, to be active sometime between March 1-19th. Activity should be on all bands CW/SSB and RTTY while he is based in South Africa. Also, the "DX News Sheet" reports that John will be active from South Africa and possibly from A2, Z2 and 3DA when he travels there. QSL via K3BEQ.

8Q, MALDIVES. Lorenzo, IK5MDF, states he will be active from here May 2-8th. His call sign will be 8Q7DF. His activity will be on 80-10 meters from Alimatha Island (IOTA AS-013). For more information and updates, please visit the following Web site: http://www.qsl.net/ik5mdf

9K, KUWAIT. The special 9K2F DXpedition has been postponed due to the current problems in the area.

C6, BAHAMAS. It has been reported that "Wild Man" Joe Pater, C6AJR/W8GEX (ex-WB8GEX), and John Walker, C6AIE/WZ8D, are going back to the Bahamas again February 25th through March 4th. John has indicated they had such a great time in early December working the Ten Meter Contest on all the bands (which included 400 QSOs on 6 meters), that they wanted to get back as soon as possible. Their main event will be the CQ 160 meter SSB Contest. The call for the contest will be C6AIE. They will be active on all bands including six meters (looking for E, TEP, F2, propagation or whatever six meters will deliver. Sorry no 2 meters this time. John states he is still waiting for QSL cards from the printer to mail out from their last trip. He requests, "Please be patient, it always takes longer for picture QSLs." Jim, KB8YKR, has already mailed out all non SASEs and bureau cards up to date to the QSL Bureaus. John has about 800 cards with SASEs that will get the new picture QSL cards when they are received. If you would like to get one of these, please send your cards direct to John Walker, WZ8D, 1930 Meredith Dr. Loveland, Ohio 45140-7216. Include a S.A.S.E for U.S.A. and outside U.S. include at least 1 IRC and S.A.E. All cards for C6AJR will go to W8GEX, (ex-WB8GEX), 1894 Old Oxford Rd. Hamilton, Ohio 45013.

EK, ARMENIA. "The 59(9) DXReport" states that Sergei, EK4JJ, is now active as 4K1700JJ to celebrate 1700 Years of Christianity. QSL via GW3CDP.

EP, IRAN. Look for Rino, EP3GI, to be active until May. SSB activity is mainly on 40 and 20 meters. QSL via EA5XV. Meanwhile, EP2MKO continues to be active on 20 meters CW (around 14004 kHz) between 1330 and 1500z.

FS5, SAINT MARTIN. Eddie, EA3NY, will be active in another ARRL SSB Contest, this time as FS5PL. He will be here from March 4-9th. During nights he will be looking for Europeans on 40 and 80 meters. He will also try RTTY during some part of the evenings before the contest and during weekends, working as many U.S. stations possible for ARRL SSB Contest. He will be active on all bands during the contest as a Single Operator High-power. His anntenas will be an A4 (4 elements from Cushcraft) with 40 meters kit, dipoles for 80 and 160, they will not be very high. Also see NP3 down below.

FT5Z, AMSTERDAM ISLAND. Mehdi, F5PFP, reports he has permission to land and operate from here next Decemeber. He will be able to stay for about one month. Mehdi states this operation will be a DXpedition, and he will do nothing else except operate. Activity will be on all bands and modes, with beams and amplifier.

HP, PANAMA. Gerard, F2JD, has returned (as February 15th) to Panama as HP1XBI for about one and one half months. After that he will be in Honduras for one month as HR5/F2JD.

HK0, SAN ANDRES & PROVIDENCIA. Silvano, KB5GL, will operate from IOTA NA-049, Providencia, February 26th through March 2nd (maybe longer), as KB5GL/HK0. Activity will be on SSB only, suggested frequencies are (+/-): 3792, 18125, 14180 and 14260, 21260 and 21280, 21310 (for Generals), 24940-24945 and 28460 kHz. QSL to Ron Lago, AC7DX, POB 25426, Eugene,

Oregon 97402 USA.

HR6, ROATAN ISLAND (Honduras). A team from the Florida Contest Club will operate from Roatan Island (IOTA NA-057) from March 3-10th. Their main event is the ARRL DX SSB contest using the contest callsign HR6/W4OVU. The operators are: Bruce, HR6/W4OVU (QSL via W4OVU), and Julio, HR6/WD4JNS (QSL via WD4JNS). They plan to operate on 80-6 meters, CW, RTTY, SSB and RS-12 satellite.

KG4, GUANTANAMO BAY. You still have time to work the group that went here to be active in the 4th Annual World-Wide RTTY WPX Contest. Operators Bill/KG4GC(W4WX), Rusty/KG4AU(WV3N), Jan/KG4QD(K4QD), Joyce/KG4OS (WA4OMS), Wayne/KG4WD and Clayton/KG4PK should be active until the 20th. The team planned to be active after the contest on all modes and bands. QSL KG4GC Contest QSOs to: Bill Gallier, KG4GC/W4WX, 4094 Sandy Run Drive E., Middleburg, FL. 32068. Please include a SASE. Bureau cards will also be answered. Non-contest QSOs go to home call. Any comments or questions can be sent to: w4wx@bellsouth.net

LU1ZC NEW DEPARTURE DATE. The latest departure date for LU1ZC (operating from Decepction Island) by the Argentine icebreaker "Almirante Irizar" is March 8th. Then the last day of full operation will be 2/3 days before the departure date. The team will be able to operate a full 48 hours during the ARRL CW Contest.

NP3, PUERTO RICO. Eddie, EA3NY, will visit here before the ARRL SSB Contest (Also see FS5, above). He will be active on 40 and 80 meters during the nights for Europe. The days he will be here are February 28th through March 3rd.

QSL INFO AND NEWS.....
Bob, K4UVT, reports to OPDX that the logs from the ZF1A 1997 CQWW CW DX Contest operation are now available online on the Web at the URL address http://www.qth.com/k4uvt/index.htm
The interactive logbook is provided as a service to allow amateurs to search for their call in the logs to verify their QSO(s) prior to mailing a QSL request. All QSL requests for the 1997 ZF1A operation are via K9LA at his CBA.

QSL requests for ZF2RF QSOs should go to Bob's (K4UVT) new address:
D. R. Dorsey, Jr., PO Box 977, Charlottesville, VA 22902-0977
Prior addresses and the Callbook address are no longer valid.

Edwin, ZS5BBO, QSL Manger for Ian, ZD9IL, who is still very active from Tristan da Cunha, reports QSL cards for contacts after August 18th can't be processed as log sheets still haven't arrived. He requests that DXers PLEASE be patient as QSL cards will all be answered as soon as the log sheets arrive. He does appologize for the delay. All QSL cards are to be sent to: Edwin Musto, P.O. Box 211032, Bluff, South Africa, 4036. Please enclose 2 IRC's.

PLEASE TAKE NOTE! Dick, C6A/N4RP, would like to remind everyone that the correct and only QSL route for contacts made with him for the past

several years is: C6A/N4RP. PO Box 030323. FTL, FL. 33303-0323. It seems that a false QSL route has been given over the internet for all of his operations from C6A. He is a regular there in most of the major contests as C6A/N4RP.

QSL YS1X ONLY TO OH2BU. Raymundo, YS1RRD, states he has been receiving QSLs for YS1X and reports he is NOT handling the QSLs or the logs for the recent YS1X operation.

DO NOT QSL! Bruce, G3HSR, states he has been getting QSLs direct for PQ8MM. He is NOT the QSL Manager for PQ8MM. Only QSL direct to: Mario, P.O. Box 533, 68906-972 Macapa - AP, Brazil.

RM6, RUSSIA (Attention Prefix Hunters!). Sam, RN6BN, reports to OPDX that a team of Shakhan Contest Club members will be working in all 1998's contests (SSB/CW/RTTY) as RM6A. This is a good chance to get a new prefix for the WPX award. QSL via RW6AWT, bureau or direct to: 350062 (no name, just a number was given), P.O.BOX 600, Krasnodar, Russia

SPECIAL EVENT. The "Cadena el Conquistador, Inc (NP3P) and the Yaureibo Cultural Center of Vieques, Puerto Rico, will be active from Vieques Island (IOTA NA-099) celebrating the 21st Vieques Cultural Festival. The special event will be operational from 1200z April 17th through 2000z on the 19th from Fort Count of Mirasol. The suggested operating frequencies will be: 28350, 21350, 14300 and also activity on 40/80/160 meters. The first 500 contacts with confirmation will receive a 8x11 certificate. The QSL adress is: Cadena el Conquistador, Inc., PO Box 161, Fajardo, Puerto Rico 00738.

T48, CUBA (Update). The No-Name Dx-Group will be using T48RAC during their trip to Santiago de Cuba from late February and early March. They plan to use this special callsign during the CQ 160 Meter and the ARRL SSB DX Contest. QSL via VE3ESE. Also, check the Kitchener-Waterloo ARC's (KWARC) Web page to see if you are in the log. A special link will appear on the web page. Go to: http://www.kwarc.org

T8, BELAU. David/KJ9I, Rudolph/NF9V and John/NZ9Z plan to be active from here December 8-17th, as T88II. Activity will be 160-10 meter with an emphasis on the topband. QSL via KJ9I (contributions appreciated): David Schmocker, N7298 County Trunk Highway F, Oconomowoc, WI 53066-9040 U.S.A.

TXK8, NEW CALEDONIA (NOT a misprint! Attention Prefix Hunter). The "LNDX" reports Eric/FK8GM, Franck/FK8HC and Alain/FK8FI will use the special callsign TXK8DX (that is T X K 8 D X) during the WPX Contest. The TX is a special prefix for French overseas territories and the K is for New Caledonia. The team plans to use a 4 element delta loop for 10m, 3 element for 15m, 3 element for 20m, 2 elements for 40m, dipoles and a square for 80m, L inverted for 160m. QSL via WB2RAJ.

V2, ANTIGUA. Operators GM3NIG, GM3UTQ, GM3COB, GM4FDM (all who recently operated from St Kilda EU-059), GM0UKZ, GM0NAI and maybe GM0GAV will be active during the upcoming IOTA Contest as V26VG. The group also hopes to be active from Antigua a few days before and after the contest using

the callsigns V2/homecalls. There will be activity on the WARC bands before and after the contest. QSLs for the Dxpedition should go to GM4FDM either direct or via the bureau. Requests for bureau cards may be obtained via E-mail from GM4FDM at wylie@scotsboy.sol.co.uk

XA, MEXICO (Update). We reported in OPDX.343, that the Texas DX Society would be active from here. The TDXS will now join with the Club de Radio Afficionados del Norte de Tamaulipas Asociacion (CRANTAC) and will activate XA5T on all bands for the ARRL DX CW contest. QSL to N5TU.

XV, VIETNAM. Anders, SM0ORV, has recently been licensed as XV7SV in Hanoi (not to be mixed up with XV7SW). He has rather modest antennas, and would be happy to QSO anyone who can pick up his signals. As the rule is in Vietnam, he has been assigned a set of fixed frequencies: 3526, 7026, 10135, 14212 and 21235 kHz. QSL via his home call SM0ORV, where he will handle all cards when he returns to Sweden in June.

XV7SW WRAPUP. For those who had a chance to work Rolf, SM5MX (aka XV7SW), he has sent OPDX this personal note to all that he made a contact with:
"Hi fans,
Having served in Hanoi, Vietnam, for four years, I have now returned to my native Sweden. You can still obtain QSL cards for contacts with me as XV7SW by writing to my home address: Rolf T Salme, SM5MX, Korpstigen 5 B, S - 135 51 Tyreso, SWEDEN or via my QSL manager SM3CXS, either directly or via the bureau.
Summing up my operation from Hanoi, it was a particular thrill to be able to activate 160 meters and offer XV on Top Band to those in need. When operating from the center of a big city, it certainly helps to have an embassy garden at your disposal for suspending elevated radials.
During my stay there, I got a lot of assistance from a lot of people overseas. Special thanks go to my patient and faithful QSL manager SM3CXS, to W8ZF who furnished us with his DXBASE Log Program and to K5ESW and JE1JKL who provided me with a lot of advice and any hardware or software I needed.... 73 de Rolf SM5MX/XV7SW"

YS, EL SALVADOR. Federico, YS1FEA, reports to OPDX that due to the lack of YS stations on the air (currently ONLY about 10 stations active on HF) three Salvadoreans stations will be operational every night on 7055 kHz from 0200 to 0330z. Operators are: Federico/YS1FEA, Roberto/YS1CQ and Oscar/YS1SH. QSL all three to: PO Box 517, San Salvador, El Salvador, Central America.

-=-
IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX Bulletin) take note, the area code has changed as of August 16th. The new 440 area code will replace the 216 area code. Currently both area codes can be used, but the 216 area code will be permanently replaced in April, 1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

If we didn't have code we'd have a large-band CB. If there is ever no-code HF with restricted bands, we will have people who slip into other bands anyway, since the rigs cover them. Oh well, I'd just keep the code, it's more fun than phone (to me). Also, how hard is 5 wpm?

Not bad, DeWayne.. a couple of keepers there.

an Italian guy walks into a place, bellies up to the counter, and orders a
plete of spaghetti. The old redneck behind the counter scratches his head and
says "You must be Italian."
The other guy says, "How dare you make such racist assumptions! Mama Mia! just
because I order Spaghetti, you assume I am italian! If I ordered Chow Mein,
would you just assume that I am Chinese? If I ask for tacos, do you assume I
am Mexican? No! That is racist! So tell me, my redneck friend, how come just
because I order spaghetti, you assume I am Italian?"
Because, son,,, this here's a hardware store."

That's because they erroneously assume that an unlicensed person cannot talk or
otherwise modulate over the air. There must be a licensed CONTROL OPERATOR
present and taking responsibility for all transmissions, but anybody, licensed
or not, can yak, type, or even beep with a CO there.

>excellent specimens of mammoths that still have MEAT on the bones? They do not
>exist, Mr. Green is making things up to furthur his glory and delusion of the
>"lonely genius"!

Well, frozen mammoths with still edible flesh, and undigested stomach
contents, have been discovered. In 1923, a road building crew in Alaska
found three. Russians also reported similar finds in Siberia. So Uncle
Wayne isn't wrong about that. Though the most likely cause of their
demise would have been foundering in a near freezing sink hole which
then froze over semi-permanently. Another possibility is that they were
buried in the permafrost by an earthquake. There is some evidence for
the latter in jumbles of downed trees found buried in the same areas of
Alaska. Not enough information about the Siberian finds is known in
the West to determine a likely cause there.

The sudden onset of ice ages is also not fantasy. Reputable scientists
have evidence that the onset can be very rapid, occurring within less than
a decade after the Arctic Ocean becomes open water rather than the once
popular view that ice ages develop gradually over several centuries.

This discovery in the latter part of the 1970s caused severe upheaval
in the geological community. It is hypothesized that a change in Pacific
and/or Atlantic currents (perhaps in a similar fashion to El Nino) causes
the Arctic Ocean to rapidly melt and become open water. This drives
very sharply increased snowfall on northern landmasses, and causes
the rapid buildup of the ice age. Think of it like the "lake effect" snowfall
near our Great Lakes, but on a continental scale. That the Arctic becomes
open water during ice ages is now indisputably confirmed. How it happens
is still a somewhat open question.

(Perhaps it is a side effect of "global warming", the currently fashionable environmentalist fantasy. Many of the same scientists currently screaming global warming doomsday were screaming about the coming ice age to the popular press of the 60s. Perhaps they were right the first time. Perhaps not.)

Unfortunately for Uncle Wayne's theory about dinosaur extinction, there is no evidence for an ice age 65 million years ago (in fact ice ages seem to be unique to the Pleistocene and Holocene (modern) Epochs). But there is good evidence for one, and perhaps as many as three, large impact events at the Cretaceous/ Tertiary boundary. And while the Sagan nuclear winter hypothesis has been throughly debunked, the effect of large cometary or asteroid impacts on climate, and ecological niches, should be sufficient to account for the rapid demise of the dinosaurs (probably over a period of several centuries, which is a blink of the eye in geological time).

The author Uncle Wayne hypes (his bookshop sells the fellow's book) has a theory that the poles shift in a matter of minutes bringing the subtropical regions to the arctic regions in almost literally the blink of an eye. This is an absurd claim, as anyone who bothers to work out the dynamics of such an occurance can plainly see. But there are some oddities in the geological record which could lead someone without a firm grasp of the energetics involved to believe such a shift had occurred. For example, the above noted stomach contents of the mammoths was subtropical vegetation. There is still no good explanation for that. And there are magnetic anomalities in the geological record which indicate that the poles do wander, though nothing to indicate it happens in an eye blink.

>He lies to hams, he ridicules the space industry as a front
>for federal money-laundering, and yet it is the aerospace industry which has
>given medicine, computers, and yes RADIO, so much new technology....

Uncle Wayne parrots the theory of the author of one of the books he sells which claims that the manned moon landings were faked. While that may have been just barely technologically possible in 1969, I'm extremely dubious. Faking the TV broadcasts of astronauts moving about in 1/6th G seems beyond the special effects abilities of the period (though it is easily possible today thanks to the efforts of such outfits as Industrial Light & Magic).

The author's thesis is that there were serious flaws in the Saturn program, and that to win the propaganda race with the Russians, the landings were faked while the actual astronauts stayed in LEO. And there really were technical problems with Saturn (and Apollo). That's no lie. But the culture was different in that era. It wasn't as risk averse as we've become in the 1990s. So I'm convinced that they really went ahead, took the gamble, and made the landings. I watched the broadcasts, and as a broadcast industry professional, I saw no way to fake what I was seeing with the technology available to us then.

But the idea that NASA has served, along with DOD, as a corporate welfare system for aerospace industries, or that such government bureaucracies are huge money sinks, is not far fetched at all. One only has to take a hard look at the cost structures to see that money is being wasted on an enormous

scale. And as President Eisenhower warned, more than inefficiency is involved. There is a real incestuous relationship between the bureaucracies of those agencies, the Beltway Bandits who often really direct policy, and the aerospace industry. That unholy triumvirate clearly conspires to milk the taxpayer at every opportunity.

I was reading a NASA long range planning document from the early 70s (when Von Braun and his can do crew were still in charge) last week. In it I discovered that astronauts have just returned this year from their first 2 year exploratory stay on Mars, there are several thousand permanent residents of our Lunar colony, and preliminary work has started on our first interstellar probe. That's a future which might have been. But it didn't happen. And a good part of the reason is that it wouldn't enrich the aerospace industry the way those money sinks called Shuttle and ISS have. (ISS has already cost 4 times what the Apollo program in toto cost, and the first segment has yet to see vacuum. Shuttle costs over $1 billion per launch, twice what a manned lunar landing cost.)

The other part of the reason is the risk averse culture which has developed in the US over the last two decades. To achieve those long range plans, perfect safety would have to have been discarded (as if perfect safety is possible anyway). Unknowns would have to have been chanced. Nuclear propulsion would have to have been embraced. Etc. But the US (and the West in general) has become culturally cowardly, fanatically afraid of risk, any risk, since the heyday of the Apollo program. We see manifestations of that at every turn. The "if it saves just one life" sickness has come to permeate our culture.

Anyway, Uncle Wayne often takes outrageous positions in order to stimulate thought by causing people to investigate the (often outrageous) claims in order to discover the truth. Unfortunately, most amateurs seem to prefer to attack the personality putting forth the ideas rather than bothering to actually think and investigate the substance of the claims. That's another of Wayne's persistent rants, that amateurs are lazy and refuse to engage their minds. They'd rather cling to the past and tradition than "boldly go" forward into a future that could have been. In that respect, I think he has always been right on target.

>(160, 80, 40, 30, 20, 17, 15, 12, and 10m).

It's not the frequency selection. It's the clientele: boring, fat, olde farhtz who have nothing to do but sit around all day and talk about their health problems. They thing a newcomer is only interested what kind of rig they use and what the weather is at their QTH. The freebanders and CBers are a lot more civilized than the holigans who carry on nightly on 75 meters.

I don't know what the communications laws are in France, but the same
problem exists here in the United States. Several Frequencies on 75 and
20 meters have this problem. As 10 meters opens up, the problem will appear
there as well. Not much you can really do about it.

Just as a matter of interest, I've written a total of 12 messages on this topic in three days. At the time of Rambo's evident first use of the "40+" comment, I'd written about eight messages. Even with a few crossposts counted in, the total was nowhere near 40+. Evidently the lad can't count very well.

Incidentally, rram has already become much less polluted with CW argument as a result of my and others' requests to keep such arguments on the proper forum. The sensible folks have complied, and the troublemakers have been introduced to the killfile. Interestingly enough, I think almost all of those who flamed me were already in my killfile, and I only saw their comments in quotes, as I did this one.

Thanks to all the good folks who have honored my request, and also to the ones with an agenda who have exposed themselves by flaming a perfectly legitimate, polite reminder.

>>Just more evidence that beepers always stick together, regardless of how
>>misguided their buddies happen to be.

Heh. Another remark that exposes how little Rambo knows of my real feelings on the issue.

Most of us DO attach our name and callsign to our remarks, as a sign that we truly believe in what we are say and are willing to accept the consequences or our words, Mr Durigan. It makes us more careful about what we say, unlike the case of a few others who seek to remain cloaked in anonymity.

You'll find its definition in the charter. A topic that doesn't fit
into any of our speciality groups, is fine for here. The .policy NG,
a speciality group, was created to take the code debate off of .misc,
so code is no longer a miscellaneous topic (as of some 6 years ago.)

Let's just decide not to respond to any more NoCode posts. That should slow it down a bit. We Code advocates are well-adjusted, secure males. Let 'em have the last word,and don't feed it anymore.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <563>

.....
>From the Editor's Desk:
As we continue to dig out from the Storms of '98, please send us your comments and observations. If you are a responder, what happened where you work/live? Let's share your knowledge with the group. A special thanks to the list members who sent in weather related sites to share.

Make sure to sign up for this year's ERI in Sacramento! The registration address is in the 'Current Events' section. - Dave Larton

To: David Larton/OES
Subject: RE: ACS Newsletter/Forum

From: Edward E. Addy (KE0EG)

Thanks for sending me a copy of the ACS newsletter. Very interesting and accurate.
I would like to bring up another problem not covered by the newsletter, as well as some personal observations and opinions. If nothing else I hope it will start some interesting discussions.
Following a large disaster which has disrupted local communications, and most do to at least some degree, it is often true that the only folks in the area that are able to provide immediate communications support are those in
the amateur radio community.
Unfortunately, those in the amateur radio community also have families that

must take top priority, which limits the number of amateur radio operators that are available to assist.
Yet another limiting factor is the fact that bringing amateur radio operators into the disaster area from outside the disaster area, on short notice, immediately following the disaster, is difficult due to the fact that roads may be closed. The housing, feeding and care of these additional people in the disaster area may be difficult to provide at best and must be weighed against the resources available in the area needed to serve the disaster victims living within the area.
With every disaster our organization has responded to, we have seen one fact take place over and over again. Initially the amateur radio community makes a very strong showing which lasts for a day or two. After that we have found that the numbers begin to drastically fall off, as many must start putting the lives of their own families back together. Others become tired or board with doing that same thing over and over again and fail to show up. Yet others will not be able to help after the first couple of days as business in the area try to restart and need all of their employees to get their companies back online.
Time and time again I have watch as the local amateur radio community struggles and struggles to try to maintain at least a minimum levels of real communications capability. It is important to remember that as the hours and days of the first week or two pass following a major disaster, the need for communications continues to grow as organizations and agencies begin to get organized and deploy their staff and volunteer into the disaster area to provide assistance to the survivors.
We have been working to address this problem for several years now. We have not had much success in getting our ability to respond put online, even though we have tested our emergency communications concepts and have found them to be solid.
Our first problem comes with the difficulty of raising the funds to acquire the communications equipment needed to equip our response teams. The second problem we see, and part of the reason for the difficulty in raising the
need funds, is that people just do not see the importance of being prepared and do not feel it is important to fund preparedness activities.
Yet another problem, which is somewhat political, is the amateur radio communities frequent reactions to PooHoo and cut down anything that would be able to assist with communications within the disaster area that is not based in amateur radio. When, in my opinion, they should be the first ones to realize the capability of other communications resources and welcome their help in serving the community in which they live.
I have nothing against the amateur radio community and in fact support and applaud the hard work that these folks provide in their communities every time a disaster occurs. In fact, many of our 300+ volunteers, as well as myself, are amateur radio operators. Our organizations was designed to serve the communications needs within a large disaster area, for the purpose of speeding aid and relief to the survivors by allowing the relief organizations to have the communications they need to better coordinate their relief activities.
Amateur radio can not and should not be expected to be able to provide 100%

of the backup communications needed within a large disaster area. I believe that many amateur radio communities attempt to give their local emergency management people this idea, which causes two things to happen. First, by
giving emergency management the false impression that amateur radio is all they will ever need in an emergency, helps to make sure that they are the only ones available to respond in an emergency. Secondly, giving this false sense of security to their communities emergency management removes the desire for their local emergency management to seek out, incorporate and support other communications resources. And, perhaps the most important result in misleading their emergency management in this way is the harm and increased suffering that will come to those in their community when a disaster does occur and they find they really do not have the ability to provide the needed high levels of communications for the extended period of time, maybe weeks or months, following the disaster. And, their local emergency management is left out on a limb, caught short, and not knowing of other communications resources to call on for help.

As an amateur radio operator myself, I feel that every amateur radio operator that helps their community to prepare and then responds when they are needed to do disaster communications support, and sticks with it, should be commended because they indeed represent the first line of community level emergency communications support. Without their efforts large disasters would no doubt claim many more lives and the amount of suffering would most assuredly increase dramatically.

It seems to me that the amateur radio community can very easily provide an additional function to the emergency management department within their community. As they are involved in communications, they could help to serve as consultants and advisors, bringing to the attention of their local emergency response agencies any and all emergency communications resource information they are aware of, currently available or being developed, amateur radio related or not.

I believe that if adequate emergency communications is to be provided following large scale disasters, it will only be by bringing all emergency communications resources online as quickly as possible, whether they are amateur radio related such as RACES, ARES, SATERN or military related such as MARS or CAP, citizen band related such as REACT or commercial such as NACEC. Alone, no one of these organizations can realistically provide the level of communications that is needed following most large scale disasters.

However by working together I believe that we can come much closer to reaching this goal.

Each can do things the others can not. MARS and CAP for instance can operate outside of the amateur radio spectrum, this can give them clearer frequencies to handle traffic. REACT frequently operated on the citizens band part of the spectrum, even though short range usually less then 15 miles, their radio equipment is very easy to come by and can be operated by almost anyone. NACEC can access almost all of these spectrum areas, but for internal disaster area communications our plans are to operate primarily on
the commercial UHF/VHF spectrums and for long haul communications we have

used federal HF and plan to add commercial satellite.
I believe that if we are all going to be successful in this effort to serve our communities, we must find a way to successfully work together. I also believe that the politics must be taken out of helping people in an emergency and the focus needs to be put back on how we can best HELP. This concept of competing organizations is 100% pure nonsense. The practice of organizations trying to act like self contained islands some how protecting and defend their organizations boundaries from those other organizations that appear to be doing something similar or trying to bring them resources that they do not have the expertise internally to provide for themselves, needs to be stopped and quickly. It seems that a much better approach would be to find a way to link everyone of these organizations together and share the abilities of each to get a much better job done. I do not mean just working together superficially, but really working together to benefit the people we serve, which are one in the same.
To those of you that are trying harder to maintain your organizations image then to actually serve your community I condemn you for the suffering that you have already caused or will cause the men, women and children living in your community.
To all of you that are doing all you can to serve your community and using your organization as just a tool through which you can get the job done, I commend you for all of your marvelous efforts. I hope you will continue to keep up the good work because you are the real disaster response organizations, the only ones that can really be counted on.
Let me assure you that this organization, NACEC, stands ready to work with any organization that feels we have something to offer them in helping them better serve their community, either in helping develop their pre-disaster preparedness plan to includes NACEC's resources or by responding with NACEC's resources when requested following a large scale disaster.
If you would like to talk with me and go over the possibilityof what we may be able to work together to accomplish, please call me at 612-798-4269. I am eager to hear any ideas that you may have that will help our organization to better serve our communities.
Thanks for the opportunity to put my 2 cents worth into this very important and worthwhile forum.

This week's EMCOMM Bulletin:

EMC119 Times have Changed!! For release 2/16/98

>From "TAC ONE", San Diego County RACES publication Vol IV, No. 2 9/20/96 in an article by Tim Powers, Training Officer:

"The concept of training has changed over the years. When I first started in volunteer emergency communications, all that was needed was the license issued by the Federal Communications Commission, the radio equipment and the knowledge of how to operate it. Well, times have changed.

Today we are asked to perform a variety of tasks, each with a particular list of requirements, using a diverse array of equipment, and for an ever growing list of agencies. RACES is asked to provide communications support for CDF (CA Dept of Forestry), San Diego County SAR (Search and Rescue), San Diego County Sheriff's Department and the Office of Emergency Preparedness. We are asked to use Amateur radio, phone, packet, ATV, government radio systems, cell phones, and at times, to hand carry written messages. And the list seems to grow with each passing event."

The remainder of the article described a series of upcoming training classes. Basic Orientation was one. Another was on the Incident Command System. Others were on Packet, Basics of Public Safety Radio systems and RCV Orientation. "Those in Field Operations must add Wildland Fire Safety, RCV Radio Operator, Helicopter Ground Safety, First Aid and CPR. Additional specialty classes may be mandatory for your particular assignment."

Their goal "is to ensure that all participants have the knowledge that will provide them with a safe working environment."

In the same issue there was a report of a response to an Animal Rescue unit, one of the many opportunities of service that Tim didn't mention in the above article.

After a vegetation fire broke out the Animal Rescue Reserve responded to protect any threatened animals and the RACES unit responded to supplement Animal Rescue's communications. (Ed: horses, cattle and pets.) That particular event only utilized five unit participants for their nine hour involvement. (edited.)

has everyone done something un lawful?
how many people have milk crates, hotel towels, cable boxes, shopping carts/baskets or have drilled or put a bb hole in the side of their electrical meter ? most people have thier view of law or how they will operate w/ certain justification. REMEMBER just don't draw attention to yourself. lg and fg will tell you this. it's really not the laws(perse) you're breaking just the authority you're flaunting. in other words Do want you want just do as they say!

Which is fine, but unlike you, LLennie insist that his military career is basis for all, yet any other person's career is just so much poop. I'm beginning to think that Geezerson has a hard-on for the Navy and Marines. Seems whenever someone else mentions their military training, suddenlly it's inapproprite to the dicussion at hand, yet the geezer feels that his time spent in the relative safety of the Ginze makes him an expert. That's my point. Why is OK for his elderliness to spout his military wisdom, yet no one else???

> If that is not ok with you tell me now and I will refrain from reading

I am not offended bu the military, just by those little armchair generals who feel that their military careers are of such great importance that they continually fall back on them, yet not allow the same of others

Hello. I just listened to the Liberty Net last night.

The participants hold PTT for several minutes... even worse... some hold PTT for more than 10 minutes... well... no breaks in between.

I hope they don't think they own the frequency.

If they are using the repeater, they will be time out...

Yep, waste it is, I have 5 weeks vacation I have to burn up under the lose of
use policy of my company, so quite frankly, between working HF, watching Lost
In Space reruns and the Jerry Springer Show, crusing the newsgroups help kill
some time

Why not call them animals and porch minkeys, Drew?? You've done that before.
Maybe you could offer to machine gun them like you did as your solution to the
Haitian refugees a year or so ago. Perhaps sharpshooters at the Mexican
border, remember that one Drew?? That was one of your best.

I love it when you refer to yourself in the 3rd person. And as to hours??
nope, you life reads like a matchbook cover. 1 2 3 and you've got the whole

picture.

Why are you so infatuated with Drew, his
life,
> his opinions, and his employment history?

Bored I guess. It's interesting to see what the chuncky little butterball
will dump out next.

>

(1) Drew you should learn to read. I said, several sources stated. I only
repeated what I read. As far as defaming Mr. Doofus, nahhhh, in fact, it
seems that someone stole my password and posted articles under my name. I
therefore refute anything and everything (happy dipwade??) And as for legal
eagle stuff, don't you remeber you were going to sue a school district because
they didn'yt want a fat white man wandering on the grounds of an elementry
school during school hours?? Remember that, boy did you look ever more stupid
than normal. And there is no defamation of character. That would imply that
you have a character at all, what I was doing was definition of character.

Oh BTW sphinter boy, you spelled "attached" wrong. And to remind you, all
your racist little posts, including the marriage of whites to latinos is still
on file.

Oh yes, loved your radio.cb post to the guy looking for a cb linear..what was
it?? have him put his question to r.r.a.m?? Good one Drew. Face facts Zippy,
you've been found out, you're just not man or boy enough to admit it. Keep up
the good work Drew...and stay off the twinkies.

>perfectly legitimate, polite reminder.

Your reminder may have been legimitate and polite, but it was poorly implemented. There was no reason to quote people's entire messages and add two lines of "reminder" to the end of them, and then post the entire thing back the USENET. It would have been far more effective, and less of a waste of bandwidth, to merely e-mail each person your "reminder".

First time I've seen criminals described as "more civilized".

But then again, coming from people who believe in "pinning coax" and
"antenna lassoing" are legitimate ways to get your nemesis to shut up,
I guess I'm not really surprised.

Hello Jeff,

I'm perfectly aware of what the foc'sle is, having spent some time on
sailboats as well as 41/2 yrs in the U. S. Navy. I don't understand
what your point is. My discussion refers to the meaning of the german
prefic "back" in the context of Backstag, which I believe is the
german for "forestay". Perhaps my meaning wasn't clear.

1752. FS: TenTec Omni-D HF Transceiver PRICE REDUCED AGAIN

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-16 00:00:00 UTC
From: ac6pv@sfo.com
Message-ID: <6c8lv9$463@ramona.sfo.com>
Source record: 178041

For sale: TenTec Omni-D, Series B with upgrade kit. $345.

Perfect electrically and mechanically. Case slightly
shopworn but no dings or dents.

VFO recently rebuilt. Digital readout. 100% solid state.

Rig has TenTec's "bulletproof" final. It will tolerate an open
circuit or a dead short across antenna terminals without harm.
Has all optional equipment: Internal circuit breaker; All xtal
filters: 2.4, 1.8, 0.5 kHz. Owner's manual, DC power cable and
microphone included.

Covers 160, 80, 40, 30, 20, 15 and 10 meter bands.
30 meters is receive only -- new owner can install the 30 meter
transmit kit (included).

Everything on this rig works 100% perfectly and it can't be beat for
a beginner's rig or as a secondary/emergency rig. I have bought a new
rig and must sell this old reliable Omni.

I dunno, Mike... I saw that particular piece of e-mail. Carl is one of the do-away-with-the-code-test guys, but from his reasonably presented, usually unemotional (relative to the usual standards of the usenent) arguments, he doesn't seem like the type to do something as childish as to fabricate a hoax like that. Yes, he is knowledgeable enough to pull it off, but he doesn't seem the type. Anyway, reporting something like that to the law if it is only a hoax is a pretty serious offense in itself. Also, getting the account canceled with Rocketmail would stir up a big load of crap if the account was a legit one. IMHO the jpg of the young fellow with the revolver is in fact genuine. (I thought at first he looked a little bit like Drew, but I guess Drew is a bit chubbier and older than the kid in the picture, so it can't be him. =o).) No, I don't know this for a fact, and I don't see any incontrovertible evidence supporting this view, but it seems the most logical conclusion.

-

Our ancestors broke the law in 1776. They murdered poor British soldiers. Mexican ones too, in the Texas War of Independence. Abolitionists often broke the law helping runaway slaves to safety. I could go on and on... Mahatma Gandhi was an incorrigible lawbreaker. So were... oh never mind. If breaking a law and in doing so I only inconvenience some other lawbreaker who constantly inconveniences a whole neighborhood, I'm gonna do it as long as the risk of suffering legal consequences is small enough to merit the calculated risk. Of course that is after trying all legal means of getting the CB woman to straighten up and fly right. Furthermore, I would help anybody else do the same thing, with the understanding that caution is indicated due to the technical illegality of the morally justifiable methods.

All the CB woman has to do to avoid having anybody interfering with her enjoyment of her radio is to stop interfering with other people's enjoyment of theirs.

I am not talking about how they HAD to, there has been to callsign
requirement for CB for some decades now. Please, if you are going to
have a disscusion on this, use the facts from the PRESENT and not the
past.

You on VHF don't just keep refering
> to N7abc as N7abc while conversing with him/her, you use their name.
I have NEVER used anyone's NAME, nor do I use their callsign unless if I
am trying to reach that person at some time that is not prearranged.
Beleive it or not, it is not a requirement to use the other person's
name or call sign to have a perfectly legal conversation.

As
> a matter of fact if the CBer belonged to a particular Radio Club, his Id
> and name was listed much like your Call Book.

Again, quit living in the 40's, it is 1998 and none of your argument
applies today. It would be very easy for me to win ANY argument on ANY
topic by using outdated laws and information to back up my side, but
that is silly.

What if you were to argue with me that it is the law that you must wear
seatbelts while driving your car, and I say you are WRONG and back up my
claim with the fact that in 1940 there were absolutly no such laws on
the books!
>

You would lose the bet. (unless, of course, you are going to start
refering back to the past again!)

> SSBers had Call Ids from some club or another they still acknowleged
> each other my name. At least the circles I ran in did. And that

Again, this debate is silly if I am refering to the present, and you are
refering to the past.

>
> I really don't know what our problem is here Doc. We both know folks
> from any walk can and do get rowdy at times and certainly more on CB
> because there is simply more of them. I would ask why we worry so much
> who is doing it rather that what can be done to stop it. Yes I know
> your idea of Calls and Names but my 8yr old Grandaughter can make up a
> name and call.

Anyone who tries to MAKE-UP a call, is found out within SECONDS by someone listening and the illegal operator quickly goes away. Someone tried to use a call sign that was not even issued yet and was so obvious that no one even acnowledged he was there, he thought his radio wasn't working since no one would answer him, and was quickly gone.

You don't know it but I am very much aligned with your
> thoughts and concerns, I guess I only dissagree with a minor point and
> it is not worth the bandwidth to pursue it.

The only difference is that we are in different time zones (by a few decades) and could easily agree on all points if we were talking about the same time period, as neither of us is lying, we are both stating correct facts, but from different times when the laws AND people's behaviors were different.

NOTE: Bandwidth is not the appropriate way to describe what you are trying to say. I know it is used incorrectly by everyone out here, but a Ham should know what the term Bandwidth actually refers to. (then again, perhaps not, as most Hams use the term INTERMOD when they actually are refering to CROSS MODULATION!) Another incorrectly used term here is Binaries, IE: "Don't post Binaries on this newsgroup." Wouldn't be anything on the newsgroup then!

Robert,
the word back for the forcastle is also known in germany. BTW the backstag
is not the forestay (Vorstag in german). If a boat has backstags it has two
of them. They go from the mast backwards to either side of the boat, while
only on one side, the leffward, is tight.
I hope this description helps to locate that stay.

Andre

> Patrick Nairne M0 AFZ

I have bought my R7000 8 weeks ago and I am still working on the VSWR of the 17m and the 30m bands. The 17m band trap shares the housing of the 15m band trap (CT2, see http://www.cushcraft.com/%20Ham/manual4.html) and tuning one band will affect the VSWR of the other band. A good VSWR on the 15m band will give you a VSWR of up to 4 on the 17m band. Same story for the 20m band and the 30m band (CT3). This is not an incident; I have seen other R7000 with the same problems. Last week I got a new trap (CT2) from Cushcraft, installed it and nothing changed.
Do not expect a VSWR=2 bandwidth of 250 kHz on 20m; this varies from 140 kHz to 175 kHz.

Conclusion: a disappointing antenna.

Dear Prospective Customers,

We are a newly formed company dealing with radio communications equipment for both commercial and amateur based in Kuala Lumpur, Malaysia. We are offering these equipments for sale at a very special discounted price due stock clearance. We are able to sell at a very competitive price due to purchasing them in large lots from Japan and due to cost of the products quoted in the local currency before.

All products are brand new and fully guaranteed. Eg. HF transceiver from ICOM (IC-706 MkII) is being offered at US$1120.00 (excluding freight) against the current price of US$1289.00 offered by other radio dealers in the US. Please allow 1 week delivery after clearance of checks. We accept checks in US funds only.

For quotes of all other products available and further queries, please e-mail to hamsupplies@trust-me.com or phone ++ 603 9439284 fax: ++ 603 2513775 attn: Farez . We will promptly entertain any of your queries.

Sincerely,

Megat Farez (Managing Director)
HamSupplies International
(Malaysian Business Reg. No: 001127716-P)

Date: 1998-02-16 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6c9lde$6n2$1@w3eax.umd.edu>
Source record: 178059

You who spend your time trashing hams will never experience
this, and it's really sad.

Anyway, yesterday, eight hams - three Tech+, one Tech,
one Advanced, and three Extras - collaborated to drop
a 22' DB-224, commercial grade antenna, replace a bunch
of connectors that were really badly corroded, clean the
whole thing, and put 'er back up in the air.

Add to that a whole mess of support from all over the area,
and it makes for a pretty amazing effort.

If you're in the DC Metro Area, the result of this labor
can be heard in the sensitive receipt of signals on 144.89
and booming transmitted signals on 145.49 MHz.

Download HAMCOMM by DL5YEC. The documentation has a schematic for the receive circuit and the PTT and transmit circuit for RTTY etc. For CW, the keying circuit is not exactly shown, but there is enough info in the doc file to figure out how to use two transistors in series for keying, just like the PTT circuit but doubled. Couldn't be easier. Now if all you want to do is send cw, and you don't want to use your computer for copying, all you need is one transistor, period, if you use SUPERMORSE. see the documentation for signal states at the serial port pins and how to turn on the keying feaature. The transmitter serves as nothing more than a switch to close the keying circuit.

1772. What's happening on 3865?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-16 00:00:00 UTC
From: Howard Johnson <hjohnson@tacsys.com>
Message-ID: <01bd3af2$962389d0$2d4b8cd0@hjohnson>
Source record: 178061
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I don't know if my last post made it out since our ISP had a UPS/power failure so excuse me if I repost this.

Last Thursday night there was a war going on between 3865 and 3860 between two groups of ham guys. The 3865 camp decided they were going to take over 3860 and a certain group off. I believe that there is a net on 3865 on Thursday nights and that some from a 3860 net were trying to cause disruption on 3865.

I was not aware that certain group(s) "owned" frequencies and could decide to take over other freqs. Sounds like a ham's version of Risk.

While I do know that certain nets may operate at various times I don't think it is proper for nets to have a turf war over freqs. The airwaves should be shared by everyone and no one group should have the right to kick or jam anyone off the air.

Howard

1773. ARRL Director post to open

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-16 00:00:00 UTC
From: K0HB@USA.NET
Message-ID: <6c9og7$nl2$1@nnrp2.dejanews.com>
Source record: 178062

At the January meeting of the ARRL Board of Directors, Tod Olson, K0TO, current Director of the Dakota Divivsion of the ARRL stated that he will not run for re-election in 1999. He went on to say that his reason for making this announcement was to provide sufficient time for persons within the Division to identify and support the person they wish to have replace him as Director in the year 2000. He pointed out that he felt that it was imperative that there be periodic change in the representation of a Division to assure that fresh ideas are presented to and considered by the Board.

ARRL members in the Dakota division (North Dakota, South Dakota, and Minnesota) who are Technician or higher licensees can be candidates. The election will be held in the summer/fall of 1999, and a call for nominations will appear in QST.

1774. Al. flashing as ground strap? another IRF and lightning question

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-16 00:00:00 UTC
From: "Lab Assistant"
Message-ID: <34E8778D.513C@prism1.gatech1.edu1>
Source record: 178063
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have been looking for copper flashing or grounding strap and it is
expensive and rather hard to find, but Aluminium flashing that is
used for roofing is quite common and affordable. Is this an acceptable
alternative? I want to install a correct lighting and RF ground and
was thinking about using 12in. or 6in. wide Al flashing as the ground
strap to a 3/4 in. copper pipe (as gound bus in the shack) and entrance
box (for antenna lightning arrestors), then connecting this
to a star ground system which is also tied into the phone, power and
tower grounds. Is this a good setup? I would like to do it right the
first time.
How do you attach a wide strap to a gound rod anyway??
thanks,
KS4TY, Eddie

Hi all. I recently purchased an IC-2710. The radio has been excellent but the manual does not say how to put it in cross-band repeat mode, just DTMF reomte control. What is the proper button sequence to enable and disable this? Also, what is the mod to open on rx/tx on VHF and UHF. I need to be able to monitor the Houston public saftey departments on UHF, and this rig is doubling as my radio for our vol. fire dept. (Yeah, I know it ain't type accepted, yadda yadda yadda) Thanks alot.

I have an Icom 2410H dual band mobile unit. I want to wire a second microphone up for this radio to use upstairs. (The Ham Shack is downstairs and I hate to run downstairs to answer the radio.) I have a remote speaker installed upstairs... now I want to get a remote microphone upstairs.

I have created a junction box for the 8 PIN MIC port. I currently run the HM-56A microphone that came with the 2410H through this junction box. (IE. The junction box is plugged into the radio's MIC port and the two microphones will be plugged into the junction box.)

I could just buy another HM-56A MIC but I'd rather find out how to wire a simple handi-talki style microphone to work with my junction box.

Does anyone have a schematic on how to wire a simple Radio Shack style handi-talki microphone to work on a Icom 2410h MIC port?

Or does anyone have a wiring schematic to run a TNC through the MIC port of an Icom 2410H?

Ken,

I never heard of a DD-1K, but I know of a couple devices called
DD-1. One was (is?) made by Oak Hills Electronics, and another
DD-1 was made by a company called Spectronics. With the "S" logo,
that might be related to the one you have. The ARRL web site lists
a product reviews for that unit in July 74 QST.

Both the items above were digital displays, thus the "DD" in the
model name.

1779. Re: *Wanted: Unwanted CW Keyer*

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-16 00:00:00 UTC
From: blueis <blueis@sprintmail.com>
Message-ID: <6c9t05$oh9$1@newsfep1.sprintmail.com>
Source record: 178068

Eugene: Congratulations (belatedly!) on getting your license.
Unfortunately I don't have an old keyer for you. But I do have some ideas
for you to consider:
You might want to start with an old-fashion straight key instead of a keyer.
Rationale: straight keys are *cheap*, you will not send (CW) faster than
you can receive, and you may not like CW -- why invest bigger dollars until
you decide?

Changing from a straight key to a keyer _will_ require you to readjust your
sending, so some will recommend getting a keyer right away. The "problems"
with this method are (1) that you really don't become proficient with code
on a keyer and (2) sending faster than you can receive is (was?) a strict
no-no.

I was a hot-shot CW operator years ago -- or at least I *thought* I was. I
checked into the Nha Trang net at about 25 wpm on day. The operator in Nha
Trang could not copy 25 wpm. I continued to send at this speed until,
finally, he sent me: INT BTO. I was stumped. I knew all the Q and Z
signals (the ACP 131 was my bible!)..... but I didn't know INT BTO. I
asked him what INT BTO meant. He replied that INT BTO meant "Are you a Big
Time Operator?" I zipped back my R(oger) R R R at 35 wpm. He then told
me that *real* BTO's always set their speed to the speed of the slowest
operator.... else nobody communicates! Needless to say, I learned a
Big(TO) lesson that day!

Congrats once again and welcome to ham radio.

Gentlemen:
To me you seem to be knowledgeable with good jobs. Your post can be debated very nicely and with a measure of dignity. Why use fowl language to put your point across? The same can be accomplished without it. We really urge all hams on the groups to "speak" as if we were on the ham bands. We don't want government regulations on the internet as we have on the air with the FCC. Please do not be offended by what I have said, for ham radio is still the best hobby one can indulge. Thanks.

So you say I am the only ham that has emergency power or antenna? Would you please enlighten us all on where you get your facts? I don't know about the great white north but in my part of the country there is a very large participation during field day with all classes of operators putting up portable stations. Why do you have to always pull your fellow radio brothers into the mud just so you can make a cute comment?

Does anyone have any knolage of the New RF ID transponders that are in use now??? I am trying to get some info on how they are used with no batteries inside. I think they use some sort of pulsed electromagnetic frequency to punp up a small capacitor and once the cap has enough energy, it sends a radio signal back to the reciever. Can anyone shed some light on this subject for me and let me know if I am right. I have been experimenting with some coils of magnet wire and a smmaller coil hooked to a capacitor and I just cant seem to transmitt much energy at any kind of distance. Im thinking that the system must be matched somehow at a resonant freq. so it can transmitt power more than a few centimeteres.
Please reply to ats@penet if you can help explain how to do this.

Thanks in advance!!!

Hey Bellows and PFC Ed - Why in the world are you cross-posting
your comments to the non-amateur newsgroup rec.radio.shortwave?
You're like lemmings ("the previous fellow did it, so I'll do it,
too.") Stop being so stubborn - delete r.r.shortwave from the headers
of this thread.

Dave,

The SETI League is a worldwide group of amateur and professional radioastronomers, radio amateurs, microwave experimenters and digital signal processing enthusiasts, who have banded together in a systematic, scientific search of the heavens to detect evidence of intelligent, extra-terrestrial life.

The SETI League was founded in 1994 as a membership supported, non-profit [501 (c)(3)], educational and scientific organization, incorporated in the state of New Jersey. The group maintains offices and a laboratory in Little Ferry, NJ. As of July 1997, The SETI League has over 500 members in 47 states and 30 countries.

The SETI League was established in response to Congress terminating all NASA SETI funding in October of 1993. Prior to that time, NASA maintained a modestly funded but scientifically credible SETI effort, out of an office at the NASA Ames Research Center, Mountain View CA. NASA officially launched its SETI effort on October 12, 1992, the 500th anniversary of Columbus' first voyage of discovery. The project consumed one tenth of one percent of NASA's budget, or five cents per American per year. In canceling NASA SETI, Congress reduced the federal deficit by 0.0006%.

Several dozen SETI searches have been conducted since the first such investigation in 1960. They have turned up a handful of interesting microwave signals, which seemed to be emanating from space and could not be explained by any naturally occurring phenomena which we understand. The results to date are by no means conclusive, but sufficient evidence exists to justify continuing the effort. The SETI League is one of several groups worldwide dedicated to privatizing SETI.

> Also, anybody wishing to participate in a discussion group on this subject,
> please send comments on the Search for Extraterrestrial Intelligence to
> this thread or......

SETI League member Bob Cutter (KI0G), has set up an unmoderated SETI email reflector on his Internet server. To subscribe, send an email to Majordomo@sni.net, with "subscribe seti" in the body. You will then receive an automated message telling you how to post to the list. Once subscribed, postings will be sent to the email address from which your subscribe message originated. Users are asked to keep posts short, to the point, respectable,

and on topic.

1789. Christie Aponte, WP4MTI, Fundraising update: THANKS!!!

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-16 00:00:00 UTC
From: spambuster@greeneggs.com
Message-ID: <6ca4a8$o10@elf.wang.com>
Source record: 178078

Good Day!

I wanted to send out this update to make everyone aware of the results of the Christie Aponte Fund Drive.

As most of you know, Christie is an 11 y/o ham from Puerto Rico who has familial ties to the Boston area. This past Christmas, the Boston-area ham population set out to raise funds to replace Christie's two meter radio that was stolen while she was undergoing surgery at Children's Hospital. Christie was seriously injured in an auto accident four years ago, and has undergone 11 separate surgical procedures to correct the damage caused by a drunk / drug affected driver.

To date, we have raised over $1000 in cash contributions. Needless to say, we are all amazed. We can't thank the ham radio community enough for the incredibly generous contributions to our informal fundraising activities. We honestly expected to have difficulty raising $250 for a small 2 meter radio. Instead, hams responded over a short, two week period with a substantial outpouring of support for this family.

The night of the joint, January meeting with BARC and WARC members, we had collected around $800 of the final amount, and presented these funds to the family. In addition, hams donated a Drake HF rig, coax, two antennas, an Alinco 2M FM radio, a 35 amp Power Supply and an SWR meter. Finally, hams donated an ARRL membership, an YLRL membership, a Waltham Club life membership (BARC had already made Christie a member of their organization), and enough money to pay for ARRL insurance for her station. The remainder of the funds that continue to trickle in will be presented to Christie when she returns for a spring tune up this March.

Thanks to the incredible generosity of the Hotel Sontesta - Cambridge, the club had use of a great conference room, and overnight accommodations for Christie and her family. All of these benefits were provided at no cost to the ham community or to the Aponte family. The hotel staff performed above and beyond the call of duty, and guaranteed the success of our project. Scott, WB1F, dressed up as Santa Claus, and presented the gifts to Christie, who in spite of acute post-operative pain thanked each and every person who attended her presentation. She even made a short speech to the assembled throng. She is one fantastic ham!

(If you ever need accommodations in the Boston area, please consider the Hotel Sonesta. They are a fantastic group of people!)

At present, we are trying to work with her family to set up a scholarship fund to help pay for Christie's college education. Christie

is exceedingly bright, and more dedicated to her schoolwork than anyone I know. She even demanded that her parents return her to Puerto Rico just days after surgery so that she wouldn't miss a day of school.

Christie's medical bills are substantial, and will put significant pressure on the family's ability to save for a college fund. As a result, we are exploring ways that we can help out with this issue.

We'll keep everyone posted regarding Christie's recuperation, and feel free to email if you have questions.

Hello All
To allow the Icom ic-t8a to
rx
50 - 230 Mhz / 300 - 1000 Mhz
Airband am/fm 300 - 400 Mhz

Hold down the Band and Squelch Buttons, then turn the radio on, keep the buttons pressed until the radio opens up about 2 or 3 seconds just watch the display and you can tell.

Have Fun and See Ya on 6

Don't assume that because I happen to have been Military that I will
tell you everyone that wore a uniform was somehow better than everybody
else. Not that I'm any judge but there many that were scum of the earth.

BTW Sir, I would thank you for your rememberance of fallen soldiers and
would also remind you that hundreds of thousands of the 60s people did
the same while professing hate for anyone in uniform not missing or
dead. I would like somehow to thank them too but don't know how.

I suppose I could say the same for old Auto parts too, but we were talking about Comm Gear and that kind that more nearly resembled Radio gear. Give it a try and you will probably be able to see how this new found supply of cheap equip may have helped at a time when some folks were less than well off. Now you may decide this made no contribution to Ham Radio and so be it, but that makes it just an opinion just as mine is and up for debate on that issue, rather than "does it apply to the subject. Yea, I know. Opinions are much like athletes foot, sooner or later everyone will have some.

I hear you say this friend, but again, where or when did I miss it? Look I realize you can't be this adamant without some cause, I just haven't seen it here and I care only about what is here not what you or others find in DejaNews. I can't keep up with what is said here much less running off to DejaHear to try and find something on someone I can use to dissmiss him/her here.

>

> > If that is not ok with you tell me now and I will refrain from reading

> continually fall back on them, yet not allow the same of others
>

Let me tell you how I feel about that stuff. I have done things that I
am proud of and some I'm not. The same is probably true of every one
that ever served. I don't care what a mans rank is, if he is the only
one at war he is nothing. The fact that Len or I or anyone else was
military has nothing to do with this subject, but things learned there
and brought here do and that you should be debating.

Have a good day

Ed

The unlicensed person can also push the buttons and turn the knobs and generally run the station as long as it is done under the *supervision* of a licensed operator for that class. FD is a great way for techs to get a chance to operate HF. They can do so as long as a amateur licensed for the class of operation is present. Great Fun.....

Not to defend the libernut net but what is your point? They can transmit longer than 10 minutes if they like. As long as they identify once every 10 minutes during that transmission.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

Latest version of Morse Decoder MRP37[3] is officially released !

MRP37 is a software-based Morse decoder developed as an MS-DOS
application by Polar Electric Engineering. It uses the audio output of
your radio receiver connected to your computer's sound card to decode
the CW audio signal to ASCII text.
A comfortabe CW-send function is included!
Now you can have a QSO at CW speeds of 20 wpm or more and make even more
contacts during CW contests! And by careful listening, we think you'll
notice an improvement in your own code copying ability.

For more info and instant download and test of MRP37[3] go to
http://members.tripod.com/~PEeng/morse

For additional information send mailto: POLAR.Electric@cww.de

Hi,

I'm the president of an old/new club, W0IO. The University of
Iowa Amateur Radio club was a club from the early 1900's until around
1987 when the club was devistated by thefts and vandalism. After that it
just kind of fizzled out, until I got some people together to start it
back up this semester.

We are now recognized again by the university and have the same
call. Requests:

1)Does anyone know anything about the old club? Some people told me it
was the second University club in the country...

2)The university told me they don't help fund equipment anymore. I'm not
sure if they mean not at all or only in certain circumstances. I would
like to know if anyone has ideas on how we could obtain anything. Coax to
hf rigs...we have nothing.

If you can help out in anyway I would appreciate it. Please send
responses to: uiarc@lime.weeg.uiowa.edu -the club
or to me dwilson@blue.weeg.uiowa.edu -my personal e-mail address.

You've already used this lame flame, Burt. Can't you come up with
something new? Of course, a flame from you is a good endorsement for
my web page. My hit counter always jumps a bit when you mention it.

>Screw the family it is the ham radio that counts right?

I don't know what kind of strange train of logic you took to get to
that conclusion from reading my web page, which has very little to do
with ham radio. Besides, after seeing what some NetKooks have done to
others, I'm not at all sure that I want to publicize my family on the
web.

Of course, all this is entirely irrelevant to the fact that we have
people like you, who can't even spell simple words, teaching our young
people. It's little wonder that a large percentage of people who post
to UseNet appear to be illiterate.

Rosa Parks ignored a rule of some bus company in Birmingham. That hardly compares to breaking a Federal law.

I hate to get off on a tangent. I did not see the email but if it was only a jpg of someone pointing a revolver at him then does he consider it a death threat every time he sees some one pointing one at him on the TV. If you notice, that happens several times per show on a lot of the evening networks shows here lately, your sitting there looking down the barrel of some kind or other of a gun. They must think that is cool.

I said I hate to get off on a tangent, but that does not mean I won't, so here goes. The difference in kids today and kids of my generation is: We went to the

Saturday morning triple header of Lash Larue/Hopp-a-Long Cassidy/Roy Rogers/Gene Autry/and a host of others doing battle with the outlaws. I don't remember ever seeing a scene where I was looking straight down the barrel of one of those 'shoots a hundred times without re-loading six guns'. Maybe the producers/camera operators of that era knew that it is foolish to point a gun, loaded or not, at someone you don't intend to shoot. Then we went home and back to the real world. The kids today see someone, several times a night, pointing a gun directly at the camera, which means they are looking down the barrel. It seems to be they are trying to come across with 'it is cool to point a gun at someone', as it is just as likely to be the hero doing the pointing as the bad guy. Maybe the producers/camera operators of today did not get training in firearms at an early age as some of us back then did, or maybe they never got any training, and therefore don't know it is stupid to point a gun at someone you don't intend to shoot.

I wonder if the difference in movies seen by kids of my era as opposed to movies seen by kids today has any bearing on the statistics of how many kids of my era took guns to school as compared to how many do today ??????????

End of tangent.

Amen to the starting with a hand key. You gotta learn to crawl before you can walk.
Another thing, some people want to try to learn to send before they can copy. If they looked at the logic of that they would see, what is the use of sending, I can't copy what the reply is?

Source record: 178102
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.equipment

I see a lot of discussions that I wouldn't put my name to. I fail to understand why they occur. Amateur Radio is a hobby folks. It also performs a public service in many instances and ways. I have participated in providing a communications link when a tornado dropped out of the clouds with no warning and destroyed a town. I've worked with parades and holiday celebrations put on by cities and counties.

I'm far from alone. Many clubs do this. Clubs provide equipment and operators for city emergency centers. Not uncommon at all.

I have 'Elmered' at least two hams that I know have gotten their tickets. I have helped folks when they have asked questions on 'How to...'.

I qualify in many eyes as an 'Old Fuddy Duddy'. That is because I have tendencies to be conventional or to some 'conservative'. I run older tube type equipment. I horse traded for a Collins Winged station; 32S3, 75S3, 312B-5, 516F-2. I also have an Heath SB-102, Kenwood TS-900, and a TS-820S.

I have built an amplifier with a pair of 813s. It met its demise when the movers packed [sic] it and shipped it to Asia. They shortened a Hallicrafter's SX-28A cabinet by about 1 1/2". I got lucky and received an insurance payment that allowed me to buy a Heath SB-201. (The 813s had a blower, a silver plated roller inductor with turns counter, and some serious air variable capacitors.

I've built my share of antennas, used frequency generators and oscilloscopes to repair rigs.

I am absolutely not an engineer. I simply found a hobby that I enjoy. My wife has told her friends, "I know where he is and what he is doing."

I'm starting another amplifier project or two. I find it very satisfying to run one I have built. It is just as satisfying running one built by kit. I rarely run one, but when I just can't get through with normal power levels I want to be able to turn it on and communicate.

I have a keyer, don't like it. I prefer my straight brass one from Nye Viking. I manage to get up to 35 WPM with it. I'll drop down an run with the new guys on the Novice segments in a heart beat. That's how they will get beyond novice, practice, practice, and practice.

I really don't care if code stays or goes, but I also see nothing wrong with it. I didn't see anything wrong with ground school before starting to learn to fly either.

I started with used rigs because I was Military enlisted and certainly make enough to buy new. I have watched as many others have struggled with solid state rigs and their SWR foldback circuits. I have since stuck with at least tube type finals and tunable PI output circuits.

Folks, let's get with the program. Enough trashing others. Those that incite hate, discontent, and are out to simply stir the pot for their entertainment aren't worth the time to bang out a response on the keyboard. Let's get back on the air and enjoy the hobby. Let's have some good sensible discussions on the NGs.

I enjoy reading the long technical threads. We might want to think about using them as an answer to some poor guy who only asked a simple question as how to make a quad, yagi, or wire a microphone. He really is only trying to get something done. Let's help him. Then we can start a new run and beat our heads into the ground with the very in-depth threads. I may not be an engineer but I sure am not stupid either. I may want to start some of you off and running on aspects of my new Amp project.

Let's see, should it be a pair of 3-400s or a single 4-1000. Should I build it with a band switch or should I use a roller inductor. Input tuned for each band? A T-Pad so I don't over drive? How about a Variac to change the plate voltage to allow for different output levels?

Okay, said my piece. Now to go scrounge through all the parts boxes. Got to find some of those HV fixed caps, feedthroughs, meters, and what have you.....

Bob Bethman

Simple, and inexensive RF switches can be made with a cheap set of walkie talkies, (even toy walkie talkies), an old CB Radios from a pawn shop, or dusted of from the trunk or your car. There are a number of RF products that can be converted for this project, easier than making one from scratch.

Say you have a pair of old CBs, ideally two that run on small batteries, and at least one of them has a earphone jack, others can be used, but, the ready made phone jack, makes it so much easier.

A low power opto-isolator could be connected to the earphone jack, and the other end can be hooked up to an appropriate relay. when a loud or sharp sound is transmitted on the appropriate channel. The device hooked up to the isolator/relay, is fired. this works great for time lapse photography, firing a flash, or triggering an alarm. Circuits from a series of very simple, and low cost books by Forrest Mimms, found at Radio Shack will have tons of information, you might find handy.

You meet all kinds of nuts on the internet, I don't know if your one, if you plan on blowing up an abortion clinic with this switch, go ahead and use this method. If you want to use if for peaceful, persuits it should be fine too, be aware, that all types of wideband RF noise could trigger your switch, prematurly. Thats is why it is a great switch. for those "Army of God" types out there.

A few years ago, it hit me that this is the problem that many may have learning the code. It's really easy, or at least it used to be, to find an alphabetical listing of the morse code. Certainly you could find it in the encyclopedia and just about any intro or reference book about amateur radio. It was also printed on the telegraph set that I bought when I was ten to learn the morse code, because I knew it was something I needed to learn to get a ham license.

The problem with that telegraph set was that it was really easy to send, and difficult to find anyone who wanted to receive. I certainly found it far more interesting to send.

And those charts don't get you to be familar with the sounds of the characters. It's a visual thing, which undoubtedly leads people, once they start to try to receive code, to mentally make the conversion from the dots and dashes to the visual form, and then do a mental lookup on that chart.

The ability to send didn't really help me to receive. Sending proper code takes practice, but it is relatively easy to memorize the actual characters. I'd walk around looking at signs and sending morse code in my head.

Around the time I realized that those code charts were probably an impediment to receiving code, it occurred to me that there may be a better way than simply starting with familiarizing people with the morse alphabet.

What would happen if your computer sent out the code as a tone as you typed on some completely unrelated matter. Like you're typing a message for the internet, or writing your book report for school, or whatever. Don't sit down to formally learning the alphabet. Let it work on your subconcious before you get to that point. The mind/body allows you to touchtype without giving much consideration to the proceess. Your fingers find the keys. SO what happens if the morse character, with proper ratio and a good high speed, comes out of your speaker each time you press a

key? Would it help you to receive code when you actually sit down to try to receive it? This would give you an easy chance to get used to the morse alphabet. Yes, you are sending the characters, but you aren't sending the code.

Certainly the software is do-able. I even wonder if it might not already exist, because someone has thought of this as a means of communicating what's on the screen to blind people.

It does, huh? Exactly how does that make me a hypocrite?

When people start to selectively disobey laws they believe do not
apply to them, we have anarchy.

What Rosa Parks did was no less excusable than what CBBimbo advocates.

Hi Louis and Bob, maybe r.r.a.policy is just not your cup of tea. The r.r.a.policy newsgroup was created to take the code testing debate off of r.r.a.misc If you don't like never ending debates, then you probably won't like r.r.a.policy but some people are addicted to it.

<<<--------- I have seen mixed reports on the web. QST did an evaluation a few
<<<months ago. It seems that it did not do that much better than a dipole

Since it is a shortened loaded antenna with a poor counterpoise system I would be surprised if it did as good as a full sized dipole. The vertical polarization might be some advantage at distance though. It is designed to be a small, easy to put up antenna useful in tight spots and it does that well. Well except for the problems mentioned in this post apparently. I bought and put up it's predecessor the R7 four years ago and it performed to specs when constructed and still does. Maybe Cushcraft shot themselves in the foot by trying to improve it. However maybe they were just trying to make more bucks as the R7000 looks to be somewhat cheaper in construction than my R7 which has individual traps and adjustable caps. The R7 did have some trouble blowing 20 meter traps at high power I've heard but since I don't own an amp (neighbor friendly) I never had that problem. 73

Basicly agree to what you say Dick, but would like to make a small point. Anybody monitoring channels 17 or 19 would be doing it for 1 of just a few reasons. 1, you are a trucker going East or a trucker going West. 2. You are someone that thinks those movies are neat featuring truckers going East or truckers going West. 3. You are traveling and need help, any kind and you know truckers going eather way will help. Other wise a smart person would never go there. BTW Dick, there is a whole world of CBers that seldom ever use AM or tune those channels where 99% of everything you would dislike takes place. They usually just want a nice quiet place to go and chew the fat, usually 5 - 10 guys or gals on freq taking turns just like we used to do on 10mtrs at nite in S Cal. Who is the guy, Movie star, big with funny voice and played side kick to western stars like Roy Rogers or Gene Autry? He was refered to as the Mayor of Northridge not that he really was, but was on freq almost every nite. This NG is not about CB or CBers I know, but I'm glad to see you don't hold them responsible for current problems on HF. some tent to group them in anything they dislike and that ain't fair, yet.

Regards

Ed

Doc,

One of us has a screwed up VFO cause we sure aren't on the same freq.
Since I have no clue what you are after I will concede to what ever you
said. I will only suggest it to be one hell of a way to communicate if
you never use a call nor a name, IF that is what you really said. It
sure as heck is ok with me, but why would you not use a persons name or
call? If I recall, you are the one claiming our problems are that we
never use names or calls and now you are reminding me that it is not a
requirement nor do you ever use them.

So be it Doc, just make up your mind which way you blow and I'll try to
keep up with you.

This conversation must be over.

Have a nice day.

They don't. It's called "malicious, intentional interference" and
is against the law.

What is being heard are the actions of individuals whose social
skills never advanced much beyond that of the average sixth-grader.

The FCC has jurisdiction to fine, suspend, or revoke, but doesn't
seem interested in doing any of these things which it has been
chartered to do.

Leave a bunch of 6th graders alone without adult supervision for
a few hours and see what happens...then instead, make it 20 years.

I received a brochure in the mail a few months ago for a WinRadio
that plugs into a PC and uses Windows. It looks very cool except
that when I visited their web site, the sensitivity specs don't seem
to match the better ones in the brochure.

What's the best thing like this out there?

It would be really cool to have a super sensitive and selective wide
band radio receiver like that for the PC and Windows (still using
3.11). But $500 seems pretty steep for it too, being there's no
case, dial, massive hardware, or any of that involved.

Is that the best thing like it on the market now?

Please email me on this too, as I may not get back here in time & my
ISP erases posts every day.

>their available power outputs exceed the maximum permitted on the ham bands.
>This is especially true in the Novice segments, where maximum output is limited
>to 200 watts.

The 200 watt limit only includes the Novice and Technician Plus
licenses. On 10 meters, General, Advanced, and Extra class operators
are not limited to 200 watts (in any subband) and may run up to 1500
watts. For some reason, this misunderstanding of the maximum power
limit has continued to this day. The 200 watt power limit is for
Novice subbands below 28.1 MHz.

Hey, when I hear a freebander on my (any) part of 10 meters, I crank
up the amp, turn the yagi around and start my CQ. As per the rules, I
will not communicate with a freebander. Heck, I don't even hear those
weak wanna-be stations... (troll)

Hello,

I am a newly licensed ham (since Sept. 97) and 14 years old, and I have been recently intoduced to CW (my local club started a CW class) and I have gotten a Realistic HTX-100 10 meter mobile. So I am looking if anyone has a spare keyer for CW, so I can use the HTX-100 in CW when I upgrade (I am currently a no-code Tech). I have seen some prices on these things in some ham magazines, and they were crazy. I am wondering if anyone has a old used keyer that they no longer need, maybe I could get it? I would gladly cover any reasonable shipping charge. If you have one, please email me. I would really appriciate it. Thanks for reading this.

Sounds like a defective disk, which you should return. (This happens,
although rarely.) If the CD is locking up while you're trying to run
it with a logging program, that may be caused by an old TSR/DLL file
in your logging program. The '98 Callbook requires a different TSR/DLL
than previous versions. I can provide it.

Hi Will, You can obtain a copy of any of the question pools by
sending an email to info@arrl.org and including any (or all)
of the following:

get index (huge list of files available via email, including
those below)
get examfaq.txt (FAQ regarding amateur exams)
get nov97.txt (Novice question pool)
get tech97.txt (Technician pool)
get general98.txt (General pool)
get advanced.txt (Advanced pool)
get extra.txt (Extra class pool)
get part97.txt (FCC's Part 97 rules and regs for the ARS)

GL with the exam!
Jeff KH2PZ / KH6

P.S. Don't include any of the (*) statements in the command lines.
P.P.S. That email service is provided by the ARRL to all amateurs,
members or not.

>hefty. Compared to my old 14AVQ it is a tank.

OK, I take it back. Since I have never seen one except in pictures that was a cheap shot. I have always been satisfied with Cushcraft, even my 14AVQ. Yes I had one years ago also. As I recall it was a 1/4 wave on all bands except 80. I'll bet it outperforms the R7/R7000 shorty antennas. But the radials took up a lot of room and were unsightly to non-hams, neighbors, XYL's ect. When I got a new roof and new house siding I decided against putting back up the rats nest of antennas. Thats why the R7 appealed to me. It doesn't beat the full sized antennas or beams but sure does a decent job for my general ham activities and I suspect that is what it is designed for. So my advice is to get the R7000 and enjoy. 73

Very well put sir.
Amateur Radio is a great hobby, let's start enjoying
it here and on the air...
How have the bands been for you lately, Dewayne.

I just rehung my 80 meter dipole with a new feed line, I've been doing a lot of copying and listening to the ARRL 15-22 WPM tapes in the car... Hopefully I should get the 20wpm soon... but I am not there yet... I am copying several letters in a row, but have not been able to put it all together yet with the exception of actually picking up small words here and there in my head...

"and" "the" "tnx".... I am doing most of my practicing during drive time... so no pencil to write it down with and I think it will be better to not try and write it down....just try to copy in my head...

I was over at an old timers shack watching him work CW all in his head. It made me catch the CW bug again. When I first got my Novice I was enhoying those CW contacts with a loaned Heath Kit HW-9 QRP rig, straight key and a 80 & 40 meter dipole.

I now have a Ten Tec 544, and a good 80 m dipole set up at the new house. I am using .625" hardline for my feed line so my loss on the hardline on HF is practically nothing. The feed line is 75 Ohm, but the Ten Tec can handle either 50 or 75 Ohm feed line. I know the hardline is over kill...heheh, but I work in the CATV field and occasionally run across some left over scrap line...The dipole is a 75 ohm antenna...I got the 75 ohm line and the rig accepts 75 ohm line...sounded like a good idea to me. :)

I am going to keep brushing up on my CW working toward that 20 wpm...
If anyone has any tips on mastering the 20 wpm...I'd love to hear them.
I know...copy, copy, copy...heheh.

Also, if anyone knows of some good methods of transforming 50 ohm to 75 ohm, I'd love to hear about it.

I saw where matching 50 ohm line to 75 ohm line with a 1/4 wave length of the mean impedence line, about 62 ohm line will work. Where do you get 62 ohm line? I saw an ad from a company that will sell 62 ohm matching cable sections for just this purpose for the 70cm and 2 meter bands.

I would like to know if there is a way to home brew these?

If I took some 75ohm hard line and removed the foam dialectric perhaps and used spacers and have a air dialectric...perhaps....any thoughts would be welcome.

Maybe we should make a new newsgroup. rec.radio.nocode.flame and we could free up this area for amateur radio talk and stop having to read through dozens of flames to find something enjoyable to read about the Amateur Radio Service.

All packet modems have a terminal speed which is the speed the modem talks to
the computer at and the speed that the radio is using to talk with other modems
over the air. These are not the same. Usually the modem talks to the computer
at 4800 or 9600 baud. On packet, the radio operates at 1200 baud for VHF or
UHF and 300 baud on the HF bands to talk to the other radios.

It's a shame Dave that you represent a software company and don't appear to know what you are talking about. This doesn't say much for your software. You don't even know the difference between terminal speed and modem operating speed.Bob W7CTW

-- Hello,
Does anyone know how to construct high frequency antennas? such as
L-band S-band? or can point me in the direction of a site containing
such information.
I am interested in receiving European satellites ..Inmarsat,Meteorsat
and some Ameteur Satellites.
My receiver is an AOR 8000 (.1 mhz --1950 mhz)..and MFJ-1278B multi mode
data controller ,Diamond 130 Antenna.
I am a newcomer to this,so any info would be greatly apreciated.

Thanks..Jonny.
Alicante,Spain.

First of all, Eugene, forget about the codesucker and don't let his innapropriate negative comment discourage you.

Second, MFJ just started producing a very inexpensive straight key. Like the other respondants, I think you ought to start out with a straight key. You might not have a working keyer some day. Learn to send manually first.Develop a good clean fist before you get into keyers. A good way to practice is to use the hamcomm program and interface. plug your key into your rig and set the mode to SSB or AM. If yor rig is anything like mine, you will be keying the sidetone oscillator and getting audio out from it, but you will not be transmitting. Set Hamcomm to receive your sidetone keying just as if it were a received signal, and try to make your computer copy you perfectly. The computer is very discriminating... if you don't have a really clean fist it will not copy for crap.

One of the R/Os on my ship used to let me send the AMVER every other day after I got my 2nd Class ticket, and he insisted that I use his keyer and paddles... those were the only times I have ever used a keyer. I don't own one, I won't buy one, I don't need one (I can always use my computer to send perfect code if I get where I can't send well) and I have more important things to do than build one. It took me about 4 hours to learn to use one at the speed I could send by hand. If I learned on a keyer first, it would take me months to learn to send by hand.

If you don't have any key at all, you can make a decent one out of a block of wood, a wooden drawer knob, some screws, a couple of relay contacts, and a hacksaw blade. The contacts ca be soldered into drilled-out screw-heads. The rest of the design I leave up to you. My first key was just like that.

Do you have crystals to sell?

Would you like to buy some crystals for those old boatanchor rigs?

Please get your free listings on THE CRYSTALS PAGE at:

http://www.mnsinc.com/bry/xtalpage.htm

There will never be a charge for this service.

We especially need to hear from those of you who have crystals to
SELL! There are only a couple of listings for that right now!

1859. Contest Logger for Listeners - Freeware

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-17 00:00:00 UTC
From: Paul O'Kane EI5DI <okanep@iol.ie>
Message-ID: <34E9FC72.1F7C@iol.ie>
Source record: 177993

17-Feb-1998.

I have uploaded SDL (Super-Duper for Listeners) V9.09 to my
Web site at http://www.iol.ie/~okanep

SDL is a comprehensive HF contest logger for SWLs, and is
distributed as freeware. It's fully working and unrestricted,
and it directly supports most international contests. Some
35 country and area multiplier reference files are supplied.

SDL links to Kenwood and Yaesu radios. It offers fast, simple
logging and editing, and it tracks multipliers, dupes and points
in real-time. It is not designed for post-contest logging.

SDL is a DOS program. It runs on any PC under MS-DOS, or in
a DOS window with Windows 3.11, 95 or NT. A reference document
is supplied in text and in Word 7 format.

SDLCHECK, included, is a post-contest program to edit SDL files
and to generate printed logs, multiplier lists, check sheets
and summary sheets.

Voyager 1 becomes most distant human-made object in space

NASA RELEASE: 98-30

In a dark, cold, vacant neighborhood near the very edge of our Solar System, the Voyager 1 spacecraft is set to break another record and become the explorer that has traveled farthest from home.

At approximately 5:10 p.m. EST on Feb. 17, 1998, Voyager 1, launched more than two decades ago, will cruise beyond the Pioneer 10 spacecraft and become the most distant human-created object in space, at 6.5 billion miles (10.4 billion kilometers) from Earth. The two are headed in almost opposite directions away from the Sun.

"For 25 years, the Pioneer 10 spacecraft led the way, pressing the frontiers of exploration, and now the baton is being passed from Pioneer 10 to Voyager 1 to continue exploring where no one has gone before," said Dr. Edward C. Stone, Voyager project scientist and Director of NASA's Jet Propulsion Laboratory (JPL), Pasadena, CA.

"At almost 70 times farther from the Sun than the Earth, Voyager 1 is at the very edge of the Solar System. The Sun there is only 1/5,000th as bright as here on Earth, so it is extremely cold, and there is very little solar energy to keep the spacecraft warm or to provide electrical power. The reason we can continue to operate at such great distances from the Sun is because we have radioisotope thermal electric generators (RTGs) on the spacecraft that create electricity and keep the spacecraft operating," Stone said. "The fact that the spacecraft is still returning data is a remarkable technical achievement."

Does it QSL?

Aye, there's the rub. Even if this is a legitimate business, which it may be
(though anyone with a domain name of "trust-me" is suspect in my book),
there is the little matter that this will be a grey market radio with no US
warranty, and the shipping and duties will eat up any savings.

>KS4TY, Eddie

Eddie, the problem with aluminum flashing is achieving a
good permanent electrical bond between it and the copper.
You'd need specially fabricated clamps and plenty of
NoAloX to keep an insulating aluminum oxide layer from
forming in the joint. You can do it, but it is probably more
trouble than just forking over the money for copper flashing.

Have a 7 month old Icom IC-756. No marks or scratches.
Non Smoker. No optional filters.
Original box and book.
Very low hours. Nice radio and receiver. Just don't use it.

Price 1,600 plus shipping

Steve

Hi Masa. This person was asking a legitimate question and you have to use the forum to jump in and make one of your cutie boy comments. Why can't you save such comments for the code/no-code threads.

You may not have noticed but you are the only person to jump in and make any such comment. They, as fellow amateurs, at least have the courtesy to allow Eugene to get some valid responses from his question without turning this into a code/no-code flame war in an inappropriate news group.

By your response you have shown that you are in truth just another useless internet troll who really has no interest in using the usenet for anything other than to see your "words" in print.

>> I am wondering if anyone has a old used keyer that they no longer need, maybe I >>could get it?

Hi Eugene, Don't let people like Masa discourage you. I agree with most of the responses you have got here so far. First learn to send with a hand key. In fact 5wpm is really too slow to be able to use most keyers very well.

When you take your code exam you may be required by the VE to send code and you will have to use a hand key for that.

Good Luck.

The R7000 construction seems to be very good. They use double wall tubing for the lower sections and the mounting plate is fairly massive. The traps look hefty. Compared to my old 14AVQ it is a tank.

The frequency certainly has a lot to do with it but I can guarantee if I had a pacemaker I wouldn't be standing in a radio room where a kilowatt transmitter was being operated. When I worked at a radio company years ago we had ladder line running down the center of the building to an antenna outside, if the line wasn't tuned properly it would radiate.

If I tuned up on 80m with a kilowatt or so and then de-tuned the antenna tuner slightly anyone holding a screwdriver or metal tool jumped out of thier seat. This provided many hours of entertainment but I hate to think of what it would have done to a pacemaker.

Fore sale...

Manufacturer
BK Precision

Model
830 Autorange Capacitance Meter

Price: $100.00

Description
4x6x1, accepts standard banana connector leads, have slotted contact for those tiny tine ceramic disc caps. Runs off batteries or wall adapter.

Auto range with LED range indicator, LCD display, have fold out legs for bench use.

History
Bought new back in 1989 when I was into high end car audio. Used for approximately 1 year tuning filters (part time on weekends, less than 30 hours total).
Cardboard box is wasted, and can't find meter leads (probably with my VOM), and the wall power adapter has been long gone(probably used for some other gadget).

If interested, please email me at the following

NOTE I hate spammers, so if replying, please remove the c from my name in the reply address.

>Pro-motorcycle-testing for all driver's licenses
>(I had to do it so you do too!)

I once long ago passed the test for operating a motorcycle, haven't ridden one in quite a while.

I also note that like code, having to pass the exam doesn't guarantee intelligence or good sense. I once spent a lovely two hours two cars behind where a motorcyclist tried to pass a truck in a one lane construction zone. Bits and pieces of the motorcycle were embedded in the road, but the cyclist was mostly a stain. Since the motorcyclist didn't learn enough in the way of safe operating habits, but could ride one, after all he managed to squeeze by me to get to the truck, somehow, I don't think you would see much improvement in driving skills, and probably a lessening of skills on the part of some.

Thanks for your comments regarding the R7000. My problem is that I have
restricted space and am unable to put up a full size dipole. I currently
use a half-size G5RV which seems to work well into Europe from UK but
not too good for DX. I am unable to raise it above about 40 feet, which
is why I am looking at vertical antennas, which should, I think give
lower angle radiation when mounted relatively low. Such antennas are not
cheap, so I am trying to get as much feedback as possible. Thank you all
for your help.

Wayne Green appearing on the Art Bell Show is totally appropriate. Double-barrel complementary stupidity...the sum of the IQs of that pair probably reaches 100, which almost equals the combined IQs of 73 Mag and Art Bell-ony Show fans.

Those of us who have tracked Green since he edited CQ Mag in the 1950s long ago stopped being surprised by his rantings and incoherence. He was the original space-cadet, long before the term was coined.

He's really got an ego. Somewhere in his editorial effluvia you'll find his account of how he personally conquered Japan in WWII as an enlisted sailor on a submarine.

Arrogance and stupidity, Green and Bell. Is that redundant, or what?

Speaking for myself, $0.00. If I need something, I build it from
components scrounged from dumpster-tossed electronic gear. The
EE college on campus tosses out lots of useful stuff that I cannibalize.

> Larry ve3fxq

That has nothing to do with Quebec Mr VE3, the station in question at 14.1225 is French (as in France) and 14.1 and up is not used by packet but by phone SSB. Maybe you should check your dial calibration or frequency display.

Quand a CN8GI, c'est pas les amerloques et autres anglophones qui vont vous rï¿½pondre. Les amerloques ne descendent pas si bas et les totos comme celui qui a rï¿½pondu lï¿½ haut ne comprennent rien au Franï¿½ais la plupart du temps. La station en question ("l'ami Pascal") est trï¿½s connue chez tous les francophones et occupe cette frï¿½quence (avec son QRM) depuis au moins 5 ou 6 ans.

Il n'y a qu'ï¿½ tourner le bouton et le laisser appeller ses FO et cie.

Salut
Madjid aka VE2GMI

Hi,
I am looking for any information what is the data format
of the data feed transmited on some FM stations and
cable and satelite channels (CNBC and on Galaxy V satellite,
transponder 13, C-SPAN I and on SatCom C3 satellite,
transponder 7, AMC and SatCom C4, transponder 1, WGN and on
Galaxy V, transponder 7, New York WPAT 93.1 and WLTW 106.7,
many other stations).
It suppose to be DBC stock market real time data feed
coded into subcurrier different then 38kHz. I was not able
to find anything on the Web (did not know what to search for).

Thanks

Michael

>Then that makes you a hypocrite.

Not really. Civil Disobedience implies a willingness to take the consequences for one's selective breaking of the law. In addition, most advocates of Civil Disobedience believe in not harming others in their protests.

Those cowards who hide behind the actions of people like Rosa Parks as an excuse for such atrocities as bombing abortion clinics are merely cowards who don't have the courage to face the consequences for their defiance of the law.

The point of Civil Disobedience is to change oppressive or immoral laws (according to the conscience of the lawbreaker), not to promote anarchy or some sort of sick personal agenda.

To put this in the perspective of Ham Radio, if you think you should violate FCC regulations in order to chase off bootleggers in the Ten Meter band, you should have the courage to sign your callsign when doing so. Otherwise, you're morally (and legally) no better than the bootleggers.

It's loser, not "looser", and the original poster can certainly go somewhere else, it's true.
But why be a "looser" (whatever that is) and act like a jerk when you don't HAVE to, to get your point across.?
Folks post stuff with subject lines like "You you PRICKS", and continue with
>You dont like the posting, well then get the fuck off and go
>post elsewhere.looser
and you have the audacity to seem upset that they don't like the posts.....
HHhhmmmmm.....
Why don't you try real language and real life, and see if you get better responses than this one. I'm sure you don't like it when someone puts YOU down and corrects your language/spelling, etc., so do yourself a favor (and all of us, too) and act like a person, not an animal with a keyboard.
Have a good day.

I need some clarafication on something i was told in line with a power output problem IVE been having.
first ....i have a dualbander that on UHF puts out more power on the lower edge of the band than the top.

now another ham told me after getting the repair manual from yaseu that i should check the vco voltage and compare it with the specs in the manual.

well, the voltage is a little low, but the radio is on freq across the band.

so, my question- is the other ham right in saying that the vco voltage is causing the low power output. and if this is true do i need to realign the radio according to the procedure in the repair manual

What difference does it make if it was a federal law or a bus company rule?
She was arrested and that made her a criminal. Right?

But if you want to talk about the seriousness of breaking a federal law,
let's go back about 150 years and look at the "criminals" who broke federal
law by harboring and aiding runaway slaves.

What it boils down to is that the word "criminal" is being tossed around on
this thread to satisfy individual agendas.

After posting the original "rant", I DID get info that the mammoth/meat thing was true. Whether the meat was fresher/more edible because of "flash-freezing" is still a point though.
Gary, I'm not saying that Green is a bad man, or wrong ALL the time. But he does not just say these things to stimulate response and growth in the field. If you think he REALLY wants hams to go out and seek the real truth, you're being a little naive, I think. People like him have been around a long time...he has an agenda becuase for whatever reason, (and I'll grant there are a few that are valid) he has a wild mistrust of the government. He has stated that there IS a cure for cancer (again, heard this on Art Bell) but that it is being "kept under wraps by the Feds" as a cure would seriously hurt the pharmacological industry.
Is this even plausible in a world where thousands of researchers are looking for a cure and no ONE single government can control what they ALL do? The point being that he does NOT care whther I find the "truth" about this for myself.He believes it, he wants others to believe it, because it helps him stay a "seeker/pioneer" in hs own mind. Not an evil man, not a "bad guy", but has an agenda which does more to hurt the real search for truth than to stimulate that search.
Yep, government groups launder money, get in all kinds of hidden, criminal situations.
Yep, there wer problems with the Saturn program.
Yep, Yep. Yep.
Does that mean he's right? I know you're not proposing that.
But I don't think a lot of his avid readers (of which you don't sound like one!) have the same commitment to your OWN search that YOU have. It is the ability of THOSE people to get into positions of leadership which bothers me.
Mike

Well, the world is full of different people. That's what makes it interesting. Old Chinese saying or curse; "May you live in interesting times."

I didn't give up R/C, srill build and fly. Latest project currently underway, 1/4 Scale Boeing PT-17 Stearman. Have Robart R780 7 cylinder cycle 128cc radial for powerplant. Turns a 26-16 prop.

N8BLK wrote:

> First, let me point out that Clark and most folks his age would object
> to the term "Sci Fi" applied to himself or his work. In some forms of
> fandom, it can be a deadly insult.

Hi Art,So what does he want to be called a serious writer of science based novels? Sorry the term used for over 50 years has been Science Fiction or Sci Fi. If the man writes Sci If novels then why should he be offended by the term. Is his ego so big that being called a Sci If writer is below his status of god hood?

I sure haven't heard any of the other science fiction authors of his age group complain about the title. Most of them had more talent in their little finger than Clark has in his whole body.

> Second, whether or not you appreciate Clark's writing, it has sold
> and there are critics and readers who disagree with you.

So have a lot of other authors with a lot more talent and a lot less ego. So what is your point? If you look at the top writers for science fiction I think you will find the number of works by Clark rather low.

> Besides, I'll bet you don't have a movie based on your writing.

A movie? Even as a non Clark fan I know that he has had at least 3 of his mediocre books turned into movies.

Of course there have been thousands movies based on the writings of authors. That alone does not make Mr. Clark a *special* person.

And, no, I don't have any movies based on my writing. That may be due to the reason that I am not a writer and really don't have any desire to be. Again, what is your point?

> Third, it was Clark who predicted and pointed out that satellites
> could be put in geo-syncronous orbit and how useful that would be,
> which from a usefulness to humanity standpoint raises him above
> "mediocre".

Oh give us a break. Virtually thousand of things we have today were *predicted* by early writers before they came into being. Clark's problem is his ego is so big he claims to be the inventor of the communication satellite just because he wrote about one in one of his books. If you want to go by his reasoning then we have no need for scientist and engineers anymore. The writes can invent everything by just writing about the idea. What a put down on the people who did the REAL work to provide communication satellites.

Heck if Clark invented the communication satellite then Jules Vern invented Space travel, submarines, atomic power, and time travel. The writers of Star Trek invented the cell phone.

Like Wayne Green, Clark is 99 percent ego and 1 percent talent. He would do well to direct his talents to the world around him rather than to point at himself all the time.

> Now, for Wayne Green. As annoying as I find some of Wayne's
> beliefs, and no matter how baseless I find some of his givens or
> assumptions, I probably would prefer finding a lot more opinionated
> and polite hams on the air with something different to say like
> Wayne.

Well if Wayne is anything on the air like the way he is in print you would probably find most QSOs with him one way. He talk.... You listen....

> I somehow don't think I'll find Wayne jamming me or
> some other ham because either one, I'm on his frequency or two
> he disagrees with me.

No you just find Wayne doing things like going into an area and calling for the control operator of a local repeater to turn off the repeater so he can use the frequency simplex to call CQ. Then he brags about how he does such things in his rag.

> I also suspect that Wayne Green wants
> amateur radio to grow and attract lots of exciting new amateurs,
> who will experiment with technology.

Actually Wayne Green wants amateur radio to do what he wants and to buy his magazines and publications. Ever notice how so many of his views on ham radio have a direct link to his pocket book? I really doubt that Uncle Wayne has any interest other than himself. After all, if he was so interested in the future of ham radio why did he launch a CB rag years ago that catered to the hobby CB users and did nothing to encourage them to upgrade to ham radio?

> Wayne also was a major
> force in RTTY as he claims,

Yep, Wayne was an early user of RTTY and did help promote the mode. That was good. But rather than gloating about how great he was with it why doesn't he promote some of the other ham RTTY pioneers.

Heck, he claims a lot of things. From reading a couple of his old editorials you would have thought that he single-handed won WWII.

> and in making 2 meter FM a viable
> mode.

There was a lot of 2 meter FM work being done even without Mr Green. It is just that Uncle Wayne had medium to *promote* the work that he was doing. Like Clark he did more to write about it than do actual work. Talk is cheep.

> OK, Wayne is different,
> but once again, I don't worry about Wayne picking up a rifle and
> beginning to snipe at folks either.

Well I personally don't worry about 99.9999 percent of the population picking up a rife and shooting at folks but that does not make them all pioneers and respected members of their communities.

I do think that Wayne served one good purpose. He was the loudest voice that questioned the ARRL. I am an ARRL supporter, and I seldom agreed with his criticisms of the league but I do believe that he provided a forum to question the actions of the league.

That was then... no more.

If I am a kid and ask someone to learn code together, I must be lonely.

Generally speaking, young people are NOT interested in working something outside of the school (like morse) anymore. School stuffs are enough for them "to work."

<<<Fremont Amateur Radio Transmitter Society (FARTS)

Another example of the continued slide into grossness of the hobby. Why is society so fascinated with body parts and functions? I guess it always was but it just seems more vocal lately. These days I not only can't leave my kids alone with the computer, but the radio as well. Of course that was true of the TV long ago. Why would any government official listen to our plea to keep the bands after listening to the bands? But then of course we have a good example in our head (no pun intended) government official.....73

Hi Yrac, In general I would agree with that statement. But all too often the amateur radio community gets blamed for the actions of the freebanders. John Q public and the media still connect any type of radio use by non commercial or public safety entities as "Ham Radio". So when the news media reports on freebander and pirate radio operations as "illegal ham radio operators" we are the ones that end up with a black eye when, for the most part, it is our community that is doing everything we can to discourage such operations.

1933. Kenwood TMV-7A Mod Problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-18 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cf9ri$6qf@bgtnsc02.worldnet.att.net>
Source record: 177850

I performed the mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

YEP!!! That is exactly the same as me. After spending a big bundle for a new roof, siding, and new windows I was very reluctant to put a mast with radials back up on the roof of the house. My R7000 is mounted about 8 feet off the ground in the garden at this time. It is not the best location as it is very close to several trees and a chain link fence so I can't expect optimum performance. I am going to get it moved to the top of the garage this spring and will then be able to compare it with my old 14AVQ. I also hope to get a mast up for a G5RV next to the house. I have had very good results with one of those at a secondary QTH.

I think you might finally be starting to get a clue. Freebanders who operate
below 28.0 Mhz are of *no* concern to hams, although radio cops such as Deignan
would have us think otherwise in regards to so-called "criminals." As far as
the "I" mentality where freebanders are concerned, if they bother you so much,
then just don't listen to them if they're not in the ham bands. Why even go
there if they bother you that much?

Here we have Ye Olde Farht #7246 praising the savior of the day: Morse Code.
An isolated incident at best, yet still a damn sure good enough to pound
everyone over the head with the continued need for morse code testing.
Funny that this happened on a frequency where knowledge of code isn't
required.

Hi Ed.

Here is one as told to me by WB0RNA, Tracy. He is an old code operator, used to operate CW mobile.

Any way, on with the story. He said one time he was on an SSB frequency band and something caught his ear. He listened and he could make out someone keying a mic and sending SOS. He alerted some other hams and they were able to get a fix on the signal. A mobile Ham had had a heart attack and could not speak. He was doing the only thing he could think of, send SOS with the mic.

If anyone thinks this is a cock and bull story take it up with Tracy, last I knew he operates late night around 3944.

Only problem I see is your expectation of 56K access over the amateur VHF
bands with (ordinary?) radios. NOT easily possible, if at all. You'd need a
broad band type transmitter receiver (2) and that won't be as easily obtained.
Most high speed amateur user operations are at 9600 baud now... that's about
the limit of ordinary ham gear... and far too slow for regular internet web
access.

Do you need HAM Radio clip art for you qsl cards, web site, or club newsletter?

Visit my website for some free sample downloads. These samples, along with 1500+ images, are available on CD-ROM from N7LN HAMWARE, as advertised in the current issue of QST.

For some free downloads, go to http://www.qsl.net/n7ln

You can also send email for more information to: n7ln@qsl.net

At the above website, you can also download a fully functional shareware US callbook. (The file is VERY large, tho, so note the size before you download.)

Thanks,
Darvell Hunt, N7LN

Hi Massa, Maybe not for you but please don't generalize for all of the world's youth. In fact how can you speak for the youth of America when you have no first hand experience?

Now I don't have first hand experience with the youth of Japan, but from everything I have read and heard they seem to be very self starting and quite willing to take on new tasks.

> If I am a kid and ask someone to learn code together, I must be
> lonely.

Well Masa, there are probably a lot more lonely kids out there surfing the internet than there are working to get their ham license. At least those who get their license will have the opportunity to meet friends in a real time mode on the air and to join and do interesting things at their local radio club.

> Generally speaking, young people are NOT interested in working
> something outside of the school (like morse) anymore. School
> stuffs are enough for them "to work."

Excuse me Masa but just what planet are you from? I know a fair amount of young people in school ranging from 2nd grade to college, and I don't know of a one that is not involved in many activities outside of school. Maybe you can enlighten us by giving some examples of people you know?

Or maybe you are speaking from personal experience? If so Masa, I really feel sorry for you. You are missing out on a lot interesting things in life. But there is still time to get off the computer and get out and start enjoying life.

> > > Learning the code, to some, may be old fasioned and maybe it is

His point Masa, is just what he said. It isn't hard. Simple.

Please tell me why it is a useless requirement if it isn't hard? If it were harder would the no-code folk find it a useful requirement? I don't think so.

Heck the theory for the tech license isn't hard either. So is it useless?

Now that this thread is turning into a code/no-code issue maybe we should move it to .policy....

>Flooding hte band with CB Mentality Idiots!

You apparently haven't been around ham radio long, or you would
remember that there have been lids on amateur radio for as long as
anyone has been a ham. In the 70's there were the Dick Bash
hams, some of whom learned to recognize two code characters
so that they could figure out which FCC code test it was, and they
memorized the exam. Ham radio has survived for over 20 years
with them, most of them probably still can't coduct a QSO at novice
level speeds on cw, and those who can, have probably learned to
enjoy CW. Before the Bash hams and the memorization, there were
the ARRL manuals for testing, if you memorized the material,
including the schematics for things like Hartley & Colpitts oscillators,
you could get a ham license. Ham radio survived, and now most of
them are old timers, some of whom complain about memorization
on the present tests.

I've previously mentioned the conditional license, and the fact that many
of the hams were just waived through by an unscrupulous ham examiner,
who just let things go. Yes, there were conditional licensees who had to
actually pass the necessary exams, but there were still some who didn't
meet all of the requirements, and probably didn't learn code at 13 wpm
either at the time.

I don't hear lots of egregious violations of amateur radio rules by
technician class hams where I live. Yes, I occasionally hear things
I could do without, but no worse than the old timers, who still don't
know that you don't have to give the callsign of the other amateur
station only your own, and how the phrase, "N8BLK & the group"
was supposed to be used under the old rules either. (One hint,
assuming I was the prototypical ham, I wasn't supposed to say
"this is N8BLK and the group"). No, the newcomers don't necessarily
do the same things that oldtimers do, but being shunned by most
of the oldtimers doesn't exactly encourage good feelings and amateur
radio cooperation. I also note that most of the lids on HF have been
licensed for quite a while too!

Yrac replies:
Once again, you have replied with your keyboard from an apparently windowless room, and not from experience. Many hams around the country operate mobile CW. Personally, I drive over 35,000 miles/year, frequently using CW. No accidents. No tickets. No Near Misses.

Had you been around in the days of the late KH6IJ, you would have read this comment in the pages of QST when someone made a comment similar to yours: "I'd rather be in a car going 80 MPH with Dr. Nose' driving and sending CW, than in a car at 45 MPH driven by a young buck with his arm around his girlfriend!"

>there if they bother you that much?
>
>

Yrac:
A few of us have an interest in the subject of freebanding which goes beyond Amateur Radio. Nevertheless, freebanders can expect to see a change when the bands open again in the new sunspot cycle. Past cycles have seen the authorized users return to the higher frequencies. What had been "clear" channels during the low sunspot activity will become quite active.

I will state again that operation outside your allocated frequencies is irresponsible. Someone else in the NG called it criminal; technically, that is true. But it goes beyond being a criminal. Much of the order in society depends upon the exercise of personal responsibility. You seem to have been raised to believe you can do whatever you want, regardless of whether you see any "consequence" to your actions, and without any concept of self disclipine. Unfortunately, this is likely to cause you grief in many areas of life.

Yrac

Source record: 177876

Greetings group. I am a General class operator that from the get-go never cared for code. My plan was learn the code just to make it to General than forget about it. And that's exactly what I did. I leared code from tapes and even bought a morse tutor and leared enough to "pass" the exam. When I did pass, I never gave code another thought. Now that I'm active on the lower bands and have participated on field events, I wish I had studied better and kept up with it because now I feel left out. So it's back to listening only now I listen to others qso'ing.

My point is that code may still not be my favorite mode but I do understand and RESPECT why it should still be required to know it to upgrade. If not for anything other reason, it should be kept for TRADITIONAL reasons. I do believe that there are other ways to keep "unwanteds" from the bands. But then again, has anyone listened to 75 meters lately?

BOTTOM LINE: Get off your duff and learn it. You may enjoy it.

Thank you for acknowledging my superior knowledge in this area.

>Did I make any mention of terroists or their atrocities? Have I made any
>mention of vigilantism in running bootleggers off the ham bands?

I merely presented those examples as perspective and background for my
point.

>My objection was in reference to freebanders being called "criminals" by

Do they use their real names and addresses, so they can be held
responsible for their actions? If so, they're practicing responsible
Civil Disobedience. If not, they're "criminals," albeit not exactly
in the same class as somebody who blows up a Federal Building. Even
if they take responsibility, of course, they're still "criminals," but
at least they will get the respect of those who believe in the
principles of Civil Disobedience.

>Dunghead Diegnan. They're fed up with ancient and archaic hazing rituals in
>order to get a license to use voice on HF hams bands. While some venture

That's rationalization of the worst sort. In fact, it's bullshit, but
that discussion is redundant and off-topic here.

>above 28.0 Mhz, most of them have established a territory between 27.405 Mhz
>(Channel 40) and 28.0 Mhz. I see them as practicing civil disobedience, yet
>DD sees them as "criminals". Conversations are much more civilized,

DD is correct in this case.

>interesting, and less quarrelsome than the daily trash on 20 meters and the
>nightly carryings on of 75 meters. Some hams even want to shut them down
>despite the fact they may only operate outside U.S. ham frequencies. All
>because they are violating a law that a government has set forth.

You are rationalizing illegal behavior. In principle, it's no
different than saying it's OK to blow up innocent children in the
Murray Building because the Government killed innocent children in
Waco.

>If these criminals are so vile, please tell me who their victims are. And

The people for whom those frequencies have been reserved, of course.
The fact that you think there are no victims to the behavior of radio
outlaws says a lot about your lack of reasoning capacity. It also
shoots big holes in your "civil disobedience" argument.

>by victims, I don't mean a pseudo victim such as, "Every ham who has studied
>and been tested is a victim, because their actions aren't fair to legitimatly
>licensed amatuers." This is not a victim. This is a straw man argument. By
>victim, I mean that I want to know who has suffered irreversible trauma at
>the hands of these "criminals." Whose lives have been made an everlasting
>nightmare by illegal tranmissions outside of the ham bands, that interfere
>with nothing "legitimate" as defined by the FCC?

This is, as you said, a straw man, which has nothing to do with the
point. All you are doing is rationalizing which laws you will obey
and which you won't. That's anarchy.

>I doubt that I'll get a straight answer to this direct question, and I can't
>wait to see what will be read into it that isn't there.

My answers to your posts have been straight, relevant, and to the
point. I'm sorry if you can't handle that.

You know your addicted to coffee when.....

You don't sweat, you percolate.

Your life's goal is to amount to a hill of beans.

When someone says. "How are you?", you say, "Good to the last drop."

Your birthday is a national holiday in Brazil.

You'd be willing to spend time in a Turkish prison.

Your coffee mug is insured by Lloyds of London.

Juan Valdez named his donkey after you.

You ski uphill.

You get a speeding ticket even when you're parked.

You speed walk in your sleep.

You answer the door before people knock.

You haven't blinked since the last lunar eclipse.

You just completed another sweater and you don't know how to knit.

You grind your coffee beans in your mouth.

You sleep with your eyes open.

You have to watch videos in fast-forward.

The only time you're standing still is during an earthquake.

You can take a picture of yourself from ten feet away without using
the timer.

You lick your coffeepot clean.

You spend every vacation visiting "Maxwell House."

You're the employee of the month at the local coffeehouse
and you don't even work there.

You've worn out your third pair of tennis shoes this week.

Your eyes stay open when you sneeze.

You chew on other people's fingernails.

The nurse needs a scientific calculator to take your pulse.

Your T-shirt says, "Decaffeinated is the devil's coffee."

You're so jittery that people use your hands to blend
their milk shakes.

You can type sixty words per minute with your feet.

You can jump-start your car without cables.

Cocaine is a downer.

All your kids are named "Joe."

You don't need a hammer to pound in nails.

Your only source of nutrition comes from "Sweet & Low."

You buy milk by the barrel.

You've worn out the handle on your favorite mug.

You walk twenty miles on your treadmill before you realize
it's not plugged in.

You forget to unwrap candy bars before eating them.

Charles Manson thinks you need to calm down.

You've built a miniature city out of little plastic stirrers.

People get dizzy just watching you.

When you find a penny, you say, "Find a penny, pick it up,
Sixty-three more, I'll have a cup."

You've worn the finish off your coffee table.

The Taster's Choice couple wants to adopt you.

Starbucks owns the mortgage on your house.

Your taste buds are so numb you could drink your lava lamp.

You're so wired, you pick up AM radio.

People can test their batteries in your ears.

Instant coffee takes too long.

You channel surf faster without a remote.

You want to be cremated just so you can spend the
rest of eternity in a coffee can.

You want to come back as a coffee mug in your next life.

You go to sleep just so you can wake up and smell the coffee.

You're offended when people use the word "brew"
to mean beer.

You name your cats "Cream" and "Sugar."

You get drunk just so you can sober up.

You speak perfect Arabic without ever taking a lesson.

Your Thermos is on wheels.

Your lips are permanently stuck in the sipping position.

You have a picture of your coffee mug on your coffee mug.

You can outlast the Energizer bunny.

You short out motion detectors.

You have a conniption over spilled milk.

You don't even wait for the water to boil anymore.

Your nervous twitch registers on the Richter scale.

You think being called a "drip" is a compliment.

You don't tan, you roast.

You don't get mad, you get steamed.

Your three favorite things in life are...coffee before and coffee
after.

Your lover uses soft lights, romantic music, and a glass of iced
coffee to get you in the mood.

You can't even remember your second cup.

You help your dog chase its tail.

You soak your dentures in coffee overnight.

You introduce your spouse as your coffeemate.

You think CPR stands for "Coffee Provides Resuscitation."

Your first-aid kit contains two pints of coffee with an I.V. hookup.

You go to AA meetings just for the free coffee.

Hope ya liked 'em!!!

Hello!

I have an 8-channel Motorola Maxtrac/Radius VHF-Lo Band radio. I have 4 channels programmed to Red Cross frequencies, and used the RSS to successfully program the other 4 channels to local 6 meter frequencies. Is this radio capable of tuning both sets of frequencies without re-tuning the radio? At present, it transmits AOK on the Red Cross frequencies, but does not on the 6 meter channels. I did notice during programming, that the RSS displayed a caution/error message on the need to possibly re-tune. Any suggestions or assistance would be greatly appreciated on this. Thank you in advance!!!

I'm surprized I've never run into Jeff digging in a dumpster, even from an old TV you can cannibalize plenty of coil forms, enamel coated wire, xtals and the like. I spent about $50 mostly for torroids and circuit board etching materials. I guess I did spend a little more, I picked up an HW-101 for $75 and put new finals in it. I had no HF gear at the time.

I hate to say it, but maybe we need a moderated ng, or maybe a couple of them... one for newbie questions and advice, and one for technical problems. Does anybody know how this works? Is one person the "moderator" who can prevent this post or that post from appearing on the board? And how would we pick somebody who would be fair and impartial in tossing stuff that doesn't belong on the moderated ng? I only suggest this because of all the porno ads, etc on these r.r.a. ngs, and the constant blitherings of codesucker, etc that aren't constructive in the least, and the sometimes overemotional code/no-code stuff. If we had a couple of ngs without all the crap and personal attacks we would have a much more enjoyable forum for ideas and advice. All the other stuff could keep appearing on the old unmoderated boards so people with neither a clue nor a moral could still have their say.

Before the flames start rolling in, let me address a couple of points... This is no more infringing on freedom of speech than any other moderated ngs. The newsgroup charter would of necessity be clear on the purpose of the ng, and there would be clear guidelines on what is appropriate for posting. Kinda like a magazine... would you like to see QST full of articles on cabinet making or cooking, at the expense of radio stuff? No, I didn't think so. Yet isn't that infringing on my rights to have an article of mine on surf fishing or politics published? No, because there are plenty of forums available for those things. The stuff that would not belong in the moderated ngs could still be posted for all the universe to see on the unmoderated ngs. Those who cry "but everybody will stop reading the old newsgroups, so they will no longer read our posts!" will certainly have something to think about... Reminds me of the argument recently that no-code debate stuff needs to be in r.r.a.m. so more readers would see it, implying that nobody reads policy because they get tired of the debate on a day-in/day out basis. If a subject repels readers, why post it where it is not welcome; just because you can and want to? If that isn't spam, I guess I just don't know what spam is.

Oh, Sorry Glen, I'm still new at this posting stuff. Sometimes can't tail who sent what. (HI HI). Anyway just got a mailer on the S-Comm controlers. They are pretty nice. Lots of goon features. Started out with a CES repeater maker. Came a long way since then. Now currently using a Cat 300 DX model. Can not find any compaints out of it so far. Just ordered a Cat 1000. Has a lot of features I'm looking for.And the price was not to bad.

First, go back to using the CBRambo handle, your making it too hard to follow using different nicsSecond, if you commit a crime are you not a criminal? It may be only a misdemenor or a civil infraction but it's still called a crime when you break the law isn't it?

Oh I see, in order for it to be a crime there must be 'irreversible trauma' eh? Sheesh I'll tell you who the victims are, they are the folks in your neighborhood who want to watch TV without interference, they are the folks who want to talk on the phone without hearing the voice of some freebander running 500 watts, the victims are the people recording a program on a VCR and have it destroyed by someone running high power without proper filtering. Additionally the victims are those who wish to use a CB as it was intended and cant talk to their buddy across town because some freebander is wiping out their front end with 500 watts. How many victims do you have to have before you take responsibility and admit that freebanding DOES have victims.Oh I guess since these folks have not suffered irreversible trauma it doesn't count eh?

> I doubt that I'll get a straight answer to this direct question, and I can't
> wait to see what will be read into it that isn't there.

Well I've tried, do you have a straight answer to my questions?

Another short point. In a sailing vessel, the foc'sle (derived from forecastle?) was also the most likely downwind point in the vessel. Therefore, the least desirable real estate, especially after six weeks at sea hauling a cargo of goats.

1977. Need voice synth for IC-281H

Newsgroup: rec.radio.amateur.misc

Does anyone have the voice synth module for the ICOM ic-281H mobile radio?

If so, how much do you want for it?

Thanks

What a wonderful Post! It's so nice to see such a positive article. Thanks
Alot Bob!

PS: T-Pad, Input tuned, a pair of 3-400's, roller inductor
Those are my choices!
Good luck!
George

80m propagation is fairly good nowadays.

"W9**, you are jamming the frequency... W9**, you are jamming the frequency..."

"W1*** is tape recording it... W9*** and W9** you are jamming the frequency !!!!! "

3950 is not a good frequency to listen to... well... I hope FCC/IC removes morse to let responsible people into HF bands very soon.

Morse, unfortunately, does not kick the ass out.

Hi folks,

I have a Hustler 10-meter mobile antenna on the back bumper of my Toyota. Yesterday I noticed that I seemed to be receiving 15 meters pretty well with it too. I run the coaxial through an MFJ antenna tuner before it reaches the antenna. My question, and forgive me if it's a stupid one, is: can I feasibly operate 15 meters off the 10 meter antenna?

Also, are people having any success with 10 meters mobile? I've had the antenna for a few days now and have yet to make a CW contact. Thanks for any info you might have...

Im sorry, I am in great need of a duplexer for the two meter band that
will handle a .600 khz split for the 147.00 mhz freuq. pairs.

Oh, Yes I have built a few repeaters. In fact four Ge Master II 110 watt
mobiles with Cat 300 Controllers, Two Hamtronics and about a half dozen
commecial band repeaters. Some with Johnson Fleetcomms and a few with
motorola micors using CES and CSI controlling devises

Thanks Buddy

1990. KENWOOD TMV-7A MOD QUESTION??

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-18 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cdrml$6pt@bgtnsc03.worldnet.att.net>

Does anyone know if the TMV-7A has been updated? I performed the
extended rx and tx mod and the radio still performs as though the mod
was not done. I got a copy of the mod that came right from Kenwood and
the mod was performed exactly as it was suppose to. After putting the
radio back together and doing a complete reset, the radio still
operates like the mod was never done.
I'm wondering if Kenwood updated the radio and there's something
different that has to be done.
Please post or email your ideas or thought on my problem.
Thanks

>bootleggers.

I love it when people try to read matter into messages that isn't there,
and then try to educate others with their superior knwoledge of a topic.
Did I make any mention of terroists or their atrocities? Have I made any
mention of vigilantism in running bootleggers off the ham bands?

My objection was in reference to freebanders being called "criminals" by
Dunghead Diegnan. They're fed up with ancient and archaic hazing rituals in
order to get a license to use voice on HF hams bands. While some venture
above 28.0 Mhz, most of them have established a territory between 27.405 Mhz
(Channel 40) and 28.0 Mhz. I see them as practicing civil disobedience, yet
DD sees them as "criminals". Conversations are much more civilized,
interesting, and less quarrelsome than the daily trash on 20 meters and the
nightly carryings on of 75 meters. Some hams even want to shut them down
despite the fact they may only operate outside U.S. ham frequencies. All
because they are violating a law that a government has set forth.

If these criminals are so vile, please tell me who their victims are. And
by victims, I don't mean a pseudo victim such as, "Every ham who has studied
and been tested is a victim, because their actions aren't fair to legitimatly
licensed amatuers." This is not a victim. This is a straw man argument. By
victim, I mean that I want to know who has suffered irreversible trauma at
the hands of these "criminals." Whose lives have been made an everlasting
nightmare by illegal tranmissions outside of the ham bands, that interfere

with nothing "legitimate" as defined by the FCC?

I doubt that I'll get a straight answer to this direct question, and I can't wait to see what will be read into it that isn't there.

A few years ago one of your criminal friends posted to rec.radio.cb
a collection of HF SSB frequencies in which other criminals (out-banders)
were freely using; I guess he wanted to encourage more folks to utilize
these channels. I almost choked when I saw long-range air-to-ground
frequencies (the Air Inc. channels) included in his list. When I informed
him of how reckless and dangerous it was to encourage illegal operations
on these vitally important frequencies, he shot back that he was well
within his rights to post such frequencies, and it wouldn't be his
his responsibility if someone interfered with aircraft communications,
blah blah blah.

You can attempt any defense you so desire, but in the end, they're
chicken-sh*t criminals, guilty of felonies. That you worship these
misfits and want to associate yourself with them paints for us an
awfully ugly picture of yourself, Rigley L. Case.

RE: Fact #4: Ham Radio Al
BY: "LENNY" <RST579@MSN.COM> to ALL on Mon Feb 09 1998 12:46 am

> still on the roles. When is the last time you QSOed a teenager. Maybe one or
Well, I had a QSO with a 14 year today infact, and there are several others around here that have tickets that I know of!

Guess what our QSO was about, he wanted to know if anyone was going over to the local community college to practice code. :)

Our HAM club is teaching a HAM radio class at the college and we are also teaching CW! We have a good number of new HAMs each year...why? We are very good at spreading the word about HAM Radio and very helpful in teaching people how to get into the hobby and becoming involved in many aspects of community service that HAM radio can provide.

Sure the HAMs like to talk! Most of the ones I talk to can win a rag chewers award. What do we talk about...well all the stuff HAMs talk about...putting up antennas, DX reports, new radios, ways of grounding, who is cross banding and linking repeaters, subjects like how much rain or snow we have come up to...gee sounds like the stuff HAMs have been talking about for years.

And CW is still active and actually seems to becoming very popular around here as I am hearing dozens of people going for the code or increasing their speed and not just to upgrade, guys are talking about building keyers and making CW contacts. The excitment is in the air and HAM radio is far from joining the dinosaurs in the Philadelphia/New Jersy/New York area!

I was talking to the 14 year old about setting up a time that he could tune into 10 meters and practice copying code while a couple of us would send some slow code so he could work toward his 5wpm. We have some great HAMs in this area, guys that do the hobby proud! We are involved in RACES, ARES, SKYWARN, The Local County Emergency Management, Traffic Nets, Public Service Communiucations, Teaching Radio Operation and Techniques, our HAMs have set up at Hospitals during winter storms and helped out in any way they could, including letting the kids talk to Santa. We have manned Red Cross Shelters and set up EOCs... The spirit of Amateur Radio is alive in our area, and thanks can go to all of us for getting active in the hobby and each doing what we can.

Get some kids together...talk to the local Scouts and Schools...I'll bet they would love to have a group of local HAMs come in and do a demonstration. Want to get kids excited about this hobby, set up a demonstration where they can listen to the Space Shuttle SAREX mission flying over, let them talk to someone on the other side of the planet. Offer to help get a local HAM club started at a highschool or Junior High.

We have a local Junior High Teacher who is a HAM, they have a HAM club at their school and a few times a year we hear students getting on the air and finding out what the hobby is about, and yes we have a few student HAMs in that school.

My 8 year old also is expressing interest in the hobby, and I am teaching him. I also have a 3 year old son...these kids will be learning the hobby, heheh. My 3 year old already likes radios. :)

No this hobby should be around for at least one more generation and well into the next century.

I hope you feel encouraged by this and please help to pass on the legacy! Make your mark on hobby by helping to teach the HAMs of the next century how to be first class operators and assets to the Amateur radio Service and your country.

Long Live Amateur Radio!

Yrac:
This is great! Let me encourage you by saying I know several people who
increased their code speed by using the same method. Keep up the good work!

>. I am copying several
>letters in a row, but have not been able to put it all together yet with the
>exception of actually picking up small words here and there in my head...
>"and" "the" "tnx"....

That's a great start. You actually build a "vocabulary" of words, just as in
learning a language. Try starting and stopping the tape on small (even one-word
segments) and thinking about what you just heard. You'll get the more common
words pretty quickly. Before you know it, you'll be able to copy in your head
with very little effort.

>
>I was over at an old timers shack watching him work CW all in his head. It
>made
>me catch the CW bug again.

Many years ago, I was standing inside the radio room at a large military
facility. One operator had left his position and was filling his coffee cup on
the other side of the room when a station called him on CW. He dashed for the
console and yelled, "#&^&@, I missed the call sign!" I said, "That was NUZY,
and he has a priority message for you." The room suddenly got quiet, and
someone finally said, "How do you know that when you don't even have a pencil
and paper to copy on?" I explained how it is possible to copy code in your
head. They had never heard of such a thing, but they decided they would
practice it.

On my next visit to that facility, they were quite good at it. It's kinda like
running the four minute mile. Years ago, it was considered impossible. One
day, a guy did it. After that, it became routine. Once we know something is
possible, we tend to move forward into new territory.

>
>I now have a Ten Tec 544, and a good 80 m dipole set up at the new house. I

>using .625" hardline for my feed line

I love it! The loss must be Zero on HF! Is the center of your dipole on a fixed point, or does the hardline dangle in free space?

> I know...copy, copy, copy...heheh.

First of all, you said you might try to learn to copy in your head rather
than write it down. In my opinion you should learn to write, then worry
about copying in your head.

This won't work while your driving of course but I once read that a good
way to increase what you can copy in your head is to close your eyes and
with a finger in the air imagine you are writing. Worked for me.

Besides your travel time and the tapes do some copying from a receiver
That is less boring than a tape and will not condition you for one tone/rhythm.
It won't hurt to have a little noise and or mild QRM. That will condition you
to concentrate. When you go take a test and the tone/rhythm is different from
what you are used to when the tape starts it might throw you for a minute or two.

Not to mention the amount of WORKING stuff that tends to get thrown
out by organizations that consider them "obsolete."

Like that R-390A that was somehow "owned" by the Computer Science
department here...that was a weird one...

As for buying stuff, I have owned hundreds of pieces of gear and
bought maybe three things "new" out of all of them.

This is not bad, as many times I "liberate" a piece of equipment
from someone's shack, it's immediately replaced by something
newer, more expensive, and equal in function :)

CB Rambo/Rigley Case, on freeband operators:
>
>My objection was in reference to freebanders being called "criminals"

>
>If these criminals are so vile, please tell me who their victims are.

> I want to know who has suffered irreversible trauma at
>the hands of these "criminals." Whose lives have been made an everlasting
>nightmare by illegal tranmissions outside of the ham bands, that interfere
>with nothing "legitimate" as defined by the FCC?

Yrac:
Any problems created by freebanders should be solved by those to whom the frequencies are allocated. You can consult readily available sources to see who is involved.

What happens below 28 MHz is not of concern to Amateurs, since these are not ham frequencies. However, many of us in this country are concerned with the "I" mentality in society which says one can do whatever he wants. Freebanders are not authorized to use these "channels", and thus fall into that category.

The situation is similar to one presently being addressed by the FCC in a large metro area on the East Coast. Taxi drivers have been using 10 Meters for dispatching. To them, it sounded like clear channels, available for the taking. Because their receivers were set for the AM mode, they were unaware that they were parked on top of CW and Packet operations, until the FCC showed up at the office and explained it to them!

This is one potential problem of freeband operation. The operators may be causing harmful interference without realizing it. However, I repeat--this must be addressed by the authorized users of the channels. If THEY don't care, I certainly don't. But I sure wouldn't be giving out my address, like I hear some of them doing!

2004. Re: Wayne Green: Looney-bin bound...

<silversq@ix.netcom.com> writes:

>To me, Uncle Wayne is to ham radio, what Arthur C Clark is to SciFi

>A mediocre talent with a super inflated ego....

First, let me point out that Clark and most folks his age would object
to the term "Sci Fi" applied to himself or his work. In some forms of
fandom, it can be a deadly insult.

Second, whether or not you appreciate Clark's writing, it has sold
and there are critics and readers who disagree with you. Besides,
I'll bet you don't have a movie based on your writing.

Third, it was Clark who predicted and pointed out that satellites
could be put in geo-syncronous orbit and how useful that would be,
which from a usefulness to humanity standpoint raises him above
"mediocre".

Now, for Wayne Green. As annoying as I find some of Wayne's
beliefs, and no matter how baseless I find some of his givens or
assumptions, I probably would prefer finding a lot more opinionated
and polite hams on the air with something different to say like
Wayne. I somehow don't think I'll find Wayne jamming me or
some other ham because either one, I'm on his frequency or two
he disagrees with me. I also suspect that Wayne Green wants
amateur radio to grow and attract lots of exciting new amateurs,
who will experiment with technology. Wayne also was a major
force in RTTY as he claims, and in making 2 meter FM a viable
mode. Of course, RTTY as a mode is now not heavily in use,
and 2 meters is not exactly a band to brag about everywhere, but
it is a contribution to amateur radio. OK, Wayne is different,
but once again, I don't worry about Wayne picking up a rifle and
beginning to snipe at folks either.

Stick with it. 10 M CW works very well from a car/truck. The antenna length is almost perfect. You should do okay with that setup.

>can I feasibly operate 15 meters off the 10 meter antenna?

I do believe you just answered your own question.. Yes with an antenna tuner you can easily tune any band on 10 meter antenna.. as long as you are using a TUNER not an SWR bridge.. and 10 meter CW is really not hopping like it used too. you might try voice on 10 meter between 28.300 and 28.500

> Good luck!
> George
>

George,

I have an agreement to acquire two chimneys and a 3-400 already. I am sort of heading that way. I'm going to hedge my bets though. I may also build a 4-1000 or a 3-1000. What the heck, more heat for the shack!

Bob Bethman

P.S. Thanks to all those whom have commented. I don't mind being essentially told that perhaps this environment is not for me either. I do dispute the contention though.

I have NO problem with debate. I enjoy a GOOD debate myself. I OBJECT to the way threads develop into personal attacks and slamming individuals and opinions. THAT is not debate. If it stayed in terms of debate I probably would not have written my piece of a personal view.

Anyway, looking for about a 3KV or 4KV plate transformer, a HEALTHY roller inductor, a couple of either air variable caps (maybe I'll try vacuumn caps...), air sockets for 3-400s, and God only knows what else. Got to get to building. In the mean time I'm going to make and string some more dipoles. I have a ladder fed system with no tuner capable of over 300W. cheaper to make new antennas than to buy or build another tuner.

73s, and happy hamming!

Bob Bethman

Ed, you can do as I did and try a Dejanews search using the keywords "WB5RUE" "flood" and "rescue". That will get you Kevin's original post of nearly a year ago where he goes into detail about the rescue and using his HT touchton e pad to send code to rescuers when the soaked Ht's speaker and mike were saturated beyond use. That is, if you'd rather read about rather than ignore it as so many no-coders seem to prefer.

Responsible like you Masa? Disseminating incorrect and misleading study information to potential new hams?When are YOU going to take responsibility for your actions regarding ham radio? Have you corrected your study guide yet? Uh huh, thats what I thought.

> Morse, unfortunately, does not kick the ass out.

No morse does not kick the ass out Masa, but it's been just enough to keep your stupid ass off HF phone. For this reason and this reason alone I'll continue to support the morse exam. Gee Masa you spent all that money on an Icom 706 and can only transmit phone on two bands. What a pity.

5 will get you 10 that if he ever passes the Advanced exam, 3950 will be the first place he goes!

Yep. Kill ham radio altogether just because you're to lazy to use a power
switch or a VFO when someone says something you don't like.

2017. FULL INTERNET Access VIA Packet Radio??

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-18 00:00:00 UTC
From: moss.i@virgin.net
Message-ID: <34eb0068.23239366@news.virgin.net>
Source record: 177984
Cross-posted to: uk.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

To all that can offer assistance

I believe there are things called packet radio internet gateways. What i want to do is to have FULL Internet access (not just EMAIL) through packet radio, via the said gateways so as to do away with my ISP which costs me £12/month, and the PHONE bill, which I think is a disgrace that we have to pay for. We pay for calls to the Internet in England!!!!!!

PLEASE NOTE:-If you have never heared of an packet radio internet gateway, DONT reply to me saying youve never heard of it, and its not possible, because I jolly well know it is possible, this would obviously be the first time you have heard of it, so DONT bother to reply to me. If you DO know what I am talking about, I would very much welcome your input.

I need to know what equiptment I will need to do this, the cost, and if there are local gateways operating in the MHZ freq. range that will be able to cope with a high speed packet radio modem (56K + baud), in the NorthWest region of England. From reading stuff off the net it wont cost a fortune to implement all this. I apparently need a TNC (Terminal Node controller), radio, amplifier, and Antenna, and anything else you might think I should need. Read some info about JNOS too, presume its possible to run TCP/IP over that, with WIN95, and all the traditional internet application programs running all above that, FTP, email, Netscape browser etc etc etc. I hope to run all that little lot from a 486AMD5x86-P75 ,256K cache,16MB, WIN95, which will more than meet the needs of the Packet radio interface.

If you can help would appreciate it

Cheers

Ian

2018. Hunting AMP Parts

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-18 00:00:00 UTC

I am off on a building project. I am going to build both a pair of
3-400s and a single 4-1000.

Looking for the following, will trade, buy, scrounge, and or beg.
Donations accepted and appreciated. Pointers to sources appreciated,
thanks in advance.

Large roller inductor for PI network
Air Variables for PI network
Vacuum variables for PI network
High wattage resistors for input T-pad
Sockets for 3-400s for use with chimneys
Another 3-400
Socket for 4-1000
Chimney for 4-1000
4-1000
Plate transformers - 3KV to 4KV
Filament transformers for 3-400s and/or 4-1000
Miscellaneous door knob and blocking capacitors
B&W bandswitch with inductor(s)

Anyone with a fried, trashed, or otherwise AMP with parting value, i.e.,
SB220/221 or something similar. Homebrewed certainly acceptable.

Have on hand to trade:

SB-102 w/Power supply. Tubes overall in good condition. Finals fine.
Can and will pull all to test.
One Westinghouse 813 - New.
EF Johnson socket for 813
Plate cap for 813 and similar sized caps
Junker HW 2036A
Stack of Heathkit manuals - New.
Also have typical parts horde.

Hope to get some good hits!

Thanks to all,

Bob Bethman
N0DGN

OK< so why are you posting to other groups if your talking policy. and are you one of those " self important twits" I was talking about before. you know the type:

1) he sits back at a club meeting till an argument starts then he's in it throwing around comments that have nothing to do with the original question.

2) ask him a question on how to do something,and he'll bore you with what he thinks will be a better idea.(ie.you want to build a dipole-he thinks a yagi is better)

3)and lets not forget the one who buys a radio,opens it up, plays with every setting to make it work better. fries the radio. sends it back to the store"saying I want my money back" then post's on the ng's on what a peice of crap it is.

LOUIS & BOB are right, we need a little more input and good will from each other, and a lot less debate on the merits of a test.

I also would like to add that if I knew the hobby was so full of these "twits", I would have stayed with radio control.

Fremont Amateur Radio Transmitter Society (FARTS) Will have a net at 28.380. This is the Novice/Tech Plus SSB/Phone portion of the band. This net is to generate interest in HF. The net will consist of a check in and Rag-Chew..... If the band is open it could get interesting. The time is Sundays at 9 am PST. All welcome.

Thanks very much for the reply. The Red Cross frequencies are all 47MHz
frequencies. The 6m frequencies are repeater pairs up near 51MHz. Still
no output from the 6m channels though! I don't know how wide the radio
tune!

Good srory Curtis and I have no problem believing it. Reminded me of a
time, (no life or death here) when my Bro-in-law and one of his sons and
I were going camping (fishing) on 4th of July in Pacific NW. They wanted
to take a Motorcycle and no place to load it so they had to ride it. It
was cold, as happens every 4th of July, (thats why I left) and when they
wanted to change places they would hit the horn. Could not hear the
horn but it did cause a scratch on my CB Speaker. I say it was no life
or death matter but the one crawling off that bike claimed I saved his
life by letting him ride inside with a heater. We owe it all to my CB.

Just kidding

Say Burp, have you ever said "CQ" on phone? If so, you've committed
the same grievous error as you written about above, for "CQ" is a code
prosign. The voice-equivalent of code's "CQ" is "Hello all stations."

> Does anybody know how this works? (good post sniped for space)

I belong to a couple of moderated groups. One of them uses a robot modkin that does a lot of the work for the moderators. It receives the posts and scans them. If they are from someone on the * pre-approved * list the post is sent on to the newsgroup. If the post is detected as spam it is dumped. All other posts are forwarded to the moderators who then approve them and send them on. To get on the pre-approved list one only has to post a couple of times to the group and stay within the boundaries set up by the charter. This does not prevent someone on the * pre-approved * list from sending spam or violating the charter but those who do soon find themselves off of the pre-approved list or banned from the group.

The other type of group does not use a mod-bot and the moderators must read and approve each post. This can sometimes cause a delay in the group with posts.

Moderated groups can have one or several moderators. The selection process for choosing who is the moderator is defined in the charter of the group. The set up procedure and voting process for establishing a moderated group is a well defined process but it does take a lot of work to get it through.

But of course now that you have mentioned the dreaded * Moderate * word we will have a flame war over it for the next six months..... (hi hi)

I do have to agree though. I might be nice to have a single moderated group in the r.r.a. family.

A couple of years ago I read a couple of articles on the number stations on the net. You might want to do a search of some of the short-wave sites and see if you can find anything. They were pretty much was you said and they also indicated that we had our own number stations and I believe one article gave the location of a couple of the stations.

2040. Re: FULL INTERNET Access VIA Packet Radio??

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-19 00:00:00 UTC
From: moss.i@virgin.net
Message-ID: <34ec8eb5.4754106@news.virgin.net>
Source record: 177809
Cross-posted to: uk.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Firstly I would Like to THANK DAVID TSE for his very informative and HELPFUL reponse to my intial posting, CHEERS DAVE, I will ask you a few things in a moment

Before then I would just like to respond to (I KNOW I SHOULDNT!!!! but I am going to) the other previous respondees, who were of absolute NO help, and I suggest have responded to these series of postings because they wanna flame!!!!! SIGH.

Why I want to connect to the net without an ISP, is to improve my connection speed (hopefully) have a closer more intermate internet connection to the NET than my ISP can provide (do away with firewalls etc BECAUSE I wanna experiment with net) and NOT have to pay the PHONE bill. The Americans dont pay for local calls to their ISPs, until that happens in UK, I want another way of connecting that doesnt invole a phone bill. If people wanna pay for their Internet connection, well I aint going stop them. But as for me I want to explore the various technological solutions to this problem, because a) its interesting, b) will save me money, and c) will provide an answer as to wheather its possible to implement realatively cheaply.

In response to WALT davidsons comment, I dont mind paying the ISP costs but the local phone call cost I do object to paying for. It goes against the very spirit of the Internet. In America they can leave their computers connected to the net 24hours a day 365 days a year presumably, and all they pay is the ISP. Well thats What I want too over here.
Further while ever there are people like you Walt, who are happy to go along with the main stream, progress will be slow. The Innovators through history have always been the people who have not been satisfied with the way things are.
I have even considered a small cheap two way SAT link to the NET. Apparently Bill gates has one up on me on this one, apparently he intends to implement a SAT system which would enable anyone with a 2 way sat link, (which units i think he is going to develope which will be very cheap), to link to the NET.
I too think for better communications, much improved speeds and services, it would be better to connect to the NET NOT via a modem and PHONE line, and to dispense with that archic part of the link altogther. So I am not the only one who thinks the modem phone link is a bad idea.

Right so having outlined my reasons for wanting a different way of connecting to the NET I will now go on to respond to the points made

by David Tse

>There are no off the shelf TNC which will give your 56kbps air speed
>(or more). There are packet modems which are in use by various
>people, but not with a TNC. An example is the WA4DSY "GRAPES" modem,

I Dont mind having to implement the link David by I/O card, and modem, infact this was the initial way I invisioned it to be done. I just read somthing about a TNC. I presume then David if It were possible to implement the link via Single PC (by the Way I have some 386s hanging around doing nothing) I would need the following??

PC--i/o card--Modem--Radio--Amp--Antenn

Then the software that would implement the TCP/IP levels and communicate with the tradional Internet Application Progs would be the Flexnet software you mention below, is this a commercial piece of software?

>Although JNOS might run under Windows, I am not aware of JNOS having a

>badly.
>
Whats the max. range (in miles) of line of sight comms so as to implement a 56K connection for eg?

From your posting David then, I take it that full internet connection with all the traditional internet programs is possible to implement and that what I wish to atchieve is possible.

The implemtation of a Gateway you mentioned 56K wirth ethernet link is interesting way to do it, and as you pointed out may be the only way possible with speeds of 56K and above. But Hopefully my research will determine wheather it will be possible to implement a stand alone PC connected to modem and radio as outlined above for 56K and above.

Any Idea of costs involved David

Cheers

Ian

For Sale:
Quality NOS tubes, radios, test equipment and a wide variety of radio related publications. A new selection of misc. radio parts has been added to this list. My schematic service is the best price around at just $3 delivered for schematics and tuning info on popular radios and TV's. If I don't have it, I'll try to help you find it! Hundreds of happy customers have used my service. Send to Rog42@aol.com for an e-mail copy of my latest offerings - list #29.

These high speed links are normally on a point-to-point basis, not for general user access, normally for mail links etc. I think they are normally on the microwave bands, probably 10GHz.

Normal BBS/node access is 1200baud or 9600baud. Don't forget that is the maximum uninterrupted data transmission rate - the actual throughput is dramatically reduced when the data is packeted (if that's a word?) and after collisions with other stations' transmissions. As an indicator 1200bd will facilitate a data transfer of 60 bytes/sec on a reasonably clear channel.

Even if you can get a 56k user access to a node don't forget that node won't be the gateway to the 'net. The TCP/IP routing will go through a number of other nodes which could be any bandwidth you care to think of.. and yours won't be the only TCP/IP traffic.

..Then don't forget BR68 1(7) and the other sections regarding message content.

Get an ISP with a local call number, put that in Friends & Family (if you're on BT) and save the surfing for the weekends. Then it's only 0.9p / minute.

(or alternatively you could work for a company with an internet-enabled network and RemoteAccess with dial back :o))

Gee, that's pretty harsh, Rigley. At home, I use an old Wyse 30
"dumb" terminal and an external modem. No PC. I enter the AT-commands
via the Wyse keyboard (the more often used ones, such as
ATDT9565080 I've programmed into the function keys). It's about
as simple and cheap (free!) as you can get.

I believe you need to increase you daily dosage of prunes to help
overcome your grumpiness.

Probably fewer than somebody driving around babbling into a
microphone. It may surprise you to learn that, to a good CW op, using
CW is as natural as talking. Running a keyer is not necessarily any
more distracting than holding a microphone up to your mouth and
pushing the PTT key.

I've broken many laws, no doubt, as have you. None of this has
anything to do with the point, of course, which is the definition of
civil disobedience.

I'm sorry that your reasoning processes are so primitive that you
evidently cannot follow simple analogies, illustrations, and
explanations. Go back and read over the complete thread again several
times. Perhaps the point will become evident to you eventually.

No. When the off-topic messages stop, I'll stop reminding folks,
politely, that there's a newsgroup specifically created for discussing
Code/No Code issues.

My little campaign has already worked much better than I had expected.
Most of the offending messages have been moved, and those few who
persist in posting off-topic messages are being added to killfiles.
It's your choice which path you take.

(Rigley L. Case) writes:

>
>>Not so in all cases. The law here in Texas is such that if someone comes on
>>someoneelse's property dark and is in the act of stealing something tangible
>>then
>>the property owner is within his legal right to shoot to kill. That makes
>the
>>property owner not only
>>judge and jury but executioner as well.
>
>Does this imply that you're going to go out and hunt freebanders and then
>shoot to kill? If so then it like Burt Fisher says: "More tough talk from
>gutless hams."

Well, the statutes in Penal code 10 chapter 46 DO also include "criminal
mischief", which is rather vaguely defined elsewhere in "Texas Crominal Law".
Also, it must be after dark, and on one's own property. Also, ANY shooting
automatically goes before a grand jury, even if it is obfiously a good
shooting.

Now... if the judge were a ham.......=o)

Disclaimer... this is only a point raised in humor and should not be construed
as legal advice, even here in Texas!!!!! (I'm not a lawyer either)

Hello Eugene.

I would agree with the others that you may want to learn to use a straight key first. You can find inexpensive keys from MFJ and other companies. You may also try attending any hamfests comming up near you. I'm sure you'll find a good deal on a used key. I did. I paid $7 for a good condition key.

Good luck!

Mike W2VOS

2061. **TRADE** HP1727A 275MHZ osc.scope for UHF Astro Saber

Newsgroup: rec.radio.amateur.misc

Hello all! Here is what I have to Trade:

HP1727A 275MHz analog storage oscilloscope with:

HP10017A Probe 10x
Tek P6131 Probe 10x
RF screen shield
Time interval digital multimeter(mounted on top of unit)
Users Manual
Front cover
This unit is in pefect condition. I'm the second only owner, I bought it from a friend who closed up shop in the computer board buisness.

I will concider trades for an Astro Digital Saber III
The Astro Saber has to have the following:

UHF (440-520MHz) 4W
Conventional Analog/Digital ready
DES-XL module installed and ready
Must do MODAT and repeater access tones
Matching Antenna
Non-Public safty speaker mic, in excelent condition
2 or more ultra High capacity batteries NTN4595 or NIMH battery
Rapid desk charger for AstroSaber radios
Opperator's Manual
Programmer's Manual
Radio must have all stickers on back, model#/Serial#, bar code,Flashport,etc
Case must very clean or mint condition. Will accept light scratches but display must be crystal clear. No deep scratches or engraving. Must be able to program all 255ch with full alphanumeric and unigue options for each mode(PL/DPL/Signalling,Paging,etc), or supply programming materials to program radio.

Thank you for reading,
Steve

I said no one would be interested in amateur radio if they had to
learn the material and to take the exam in order to use the radio.
If they can use the radio right away and make contacts, I am sure they
will be interested in amateur radio.

The amateur radio is not an entertainment (generally speaking for most
of people). Many are looking entertainment outside of school hours or
office hours or whatever.

A 56K packet link should be able to replace a phone line for local communications. If you happen to own your own ISP, this could allow you to have Internet access at home without paying phone charges.

The problem for most people is: what's on the other end of the radio link? It's probably another computer, and *it* still needs at least a 56K connection to the Internet at large. How will you provide this connection? If you have your own ISP with its own T1 connection, you just run a wire from the machine at the far end of the radio link into your main router. But if you are using a commercial ISP, you have to convince *them* to provide your far-end computer with a connection. And you probably have to provide both ends of the radio link yourself.

At the UBC amateur radio society, we have a couple of machines with full Internet access provided entirely by radio. There is one 56 kbps radio link, and another 2 Mbps link. But the "far end" of the one link is a machine in the electrical engineering building, and the "far end" of the other link is a machine in the student society offices. These machines, in turn, are connected to Ethernet or better networks that cover the campus, and have a pipe to the outside world that is at least 10 Mbps. So the radio links "extend" the campus network into machines that are not otherwise connected. But without the physical network links (copper and fiber) that covers the campus, there would be nobody for the radio-linked machines to talk to other than themselves.

Dave

P.S. I trimmed the list of newsgroups to ones that seemed at least somewhat relevant to the subject. Spamming your message to every newsgroup with "radio" in the name just means you're too lazy to figure out where your question really belongs.

Actually Drew, Carl is way more man than you. He calls a spade a spade (get it Drew???) and doesn't hide behind multiple bullsh*t anon cybernames like you have a unfailing tendency to do. What's so great is that sooner or later you fall out of character and become lame Drew Durigan...a ham wannabe with a license to nowhere. No wonder you lost the last 2 jobs.

Just curious, when you post to rrec.radio.cb, you accuse amateurs as being the devils advocate, yet when you post to r.r.a.m, you call cb'ers criminals and thieves, why is that???

Just remember Drewsikins...

If it walks like a duck and quacks like a duck OR a rose by any other name......

Keep trying Spew, here's a few

>communications will interfere with a pacemaker? Has anyone had any
>experience with problems with their pacer?

I don't have a pacemaker, and I don't install them, however I don't know of any verified interference by RF with the operation of an even remotely modern pacemaker. If you or a loved one is about to have one, or have one, first talk to the physician who is installing the pacemaker, and ask for the name for the tech representative for the brand of pacemaker. The tech reps can give safe conservative guidelines for operating a transmitter near a pacemaker, and also what should be avoided. They have a strong interest in not having a pacemaker die because of RF interference and also having happy pacemaker users. Doctors don't use a brand if patients have problems, and patients who die because of defectively designed pacemakers are a bit expensive on the liability insurance rates.

You did not say what the Rec Cross frequencies are. One thing, if they are very far from the 6M freqs, you'll have problems getting an acceptable SWR on the antenna. I use UHF Maxtrac/Radius radios from 441 to 468 MHz TX with no problems, even with the same antenna. That "Tuning error" message you got when programming is normal, and not normally needs to be heeded, but mayby in your case, the radio does need tuning.

Mobile CW is more popular than you realize (you must not operate on
HF at all). It's no more distracting than listening to music on your
AM/FM broadcast radio. Hands are kept on the wheel, eyes on the road.

What happens outside the ham bands certainly *does* concern us. Your buddies are "free-banding" (while they're "free-basing"?) on the HF SSB aeronautical air-to-ground frequencies. These channels are used by aircraft to request altitude changes (say, due to turbulence), and while doing so, are crossing the paths with other aircraft - a very vulnerable few minutes. These frequencies are also used to alert aircraft of other traffic or turbulence ahead. Jamming or unintentional interference to these vital communications can have disastrous results.

Why in the world would you condone such behavior? The picture we're forming of you is getting uglier and uglier with every remark you post.

Your probably not aware that CW ops who drive and operate copy in their head, no paper or pencil to mess with. It's the same amount of distraction as a cell phone or 2 meter mobile contact. It does take one hand to send with though but then how many people drive with 2 hands all the time anyway, especially when their holding the mike. CW mobile is great fun and sure makes the trips shorter. It's more reliable in that there is more band room (or should I say a narrower signals) to spread out in. When using SSB mobile on 20 meters I always got covered, but on CW I almost always complete the QSO, some lasting many many miles. And my stuff is simple, a TS50 (50 watts because I use the cigarette lighter jack for power) and a Hamstick on a trunk lip mount. World wide coverage from anywhere with no holes and no repeaters. 73

<<<<<Rigley said: This is a sure way to thin out Ye Olde Farhtz in a hurry: CW from a vehicle,

2092. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-19 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cgo4j$36a@bgtnsc03.worldnet.att.net>
Source record: 177915

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

First of all, you got the name wrong. Packet radio internet gateway
has traditionally been a message/e-mail gateway only. On the packet
radio side it has traditionally been AX.25, and it routes messages
back and forth to the Internet. What you want is a TCP/IP connection
over packet radio. It has been done in various areas.

>PLEASE NOTE:-If you have never heared of an packet radio internet
>gateway, DONT reply to me saying youve never heard of it, and its not
>possible, because I jolly well know it is possible, this would

>welcome your input.

Well, you don't get to say the term right, so some people might get
confused.

>I need to know what equiptment I will need to do this, the cost, and
>if there are local gateways operating in the MHZ freq. range that will

Again, you didn't get the term right. What you need is a UHF or
higher frequency if you want to operate on amateur radio bands. And
just to be sure, check with your own country's band plan as I am not
familiar with yours.

>be able to cope with a high speed packet radio modem (56K + baud),
>in the NorthWest region of England. From reading stuff off the net it
>wont cost a fortune to implement all this. I apparently need a TNC
>(Terminal Node controller), radio, amplifier, and Antenna, and

There are no off the shelf TNC which will give your 56kbps air speed
(or more). There are packet modems which are in use by various
people, but not with a TNC. An example is the WA4DSY "GRAPES" modem,

to be used by the P.I. synchronous I/O card by the Ottawa group. By the way, speed is measured by bps (bits per second), baud is not used commonly anymore as it refers to the change of phase per second, which does not correspond to the speed issue.

>anything else you might think I should need. Read some info about JNOS
>too, presume its possible to run TCP/IP over that, with WIN95, and all
>the traditional internet application programs running all above that,
>FTP, email, Netscape browser etc etc etc. I hope to run all that
>little lot from a 486AMD5x86-P75 ,256K cache,16MB, WIN95, which will
>more than meet the needs of the Packet radio interface.

Although JNOS might run under Windows, I am not aware of JNOS having a socket link or a network interface presence to Windows (95 or not). In order to use "traditional" internet apps, you need to use a stack which has connection with Windows networking interface. FlexNet is the only software I am aware of which can do that. However, I am not aware of FlexNet supporting the 56kbps GRAPES or any high speed packet modem (yet), although they have a modular design which gives it a future possibility. The only other way to do it, which is the way our club (University of British Columbia Amateur Radio Society) has been doing, is to use Linux operating system, which has AX.25 driver for the P.I. card for the 56k link, and run this computer as a gateway. Then use a Windows computer connecting to this Linux gateway via a network connection (we use 10B2 ethernet). But you didn't mention you have another computer, which this needs. I am not sure how crazy your local packet group is, but it took us a long time and quite some money to build the system we have today. In order to have the connection with the user, (we are only doing a short hop point to point now), we are currently building the 56k as a repeater to be put somewhere high up on mountains. Stilll people with no line of sight to these repeaters will not connect as any reflections will distort the signals badly.

I am not sure if you have your licence yet, but may be that will be a first step. Or may be now you think paying your ISP isn't that bad an idea.

Date: 1998-02-19 00:00:00 UTC
From: yrac@aol.com
Message-ID: <19980219095700.EAA14316@ladder02.news.aol.com>
Source record: 177917

Yrac (on freebanding):

> Much of the order in society
>>depends upon the exercise of personal responsibility. You seem to have been
>>raised to believe you can do whatever you want, regardless of whether you
>see
>>any "consequence" to your actions, and without any concept of self
>disclipine.
>>Unfortunately, this is likely to cause you grief in many areas of life.

Rigley Case:
>
>So because I'm opinionated, and that opinion doesn't coincide with the status
>quo of communcations laws, I wasn't raised with any concept of
>self-discipline.

Yrac:
Your opinion of what the law SHOULD BE does not change the law. I stand by my post which said your attitude is likely to cause you grief in many areas of life. I suspect this already is true--and not just in the radio hobby.

RLC:
>Did you know that you could be sued for lible if you render a psychiatrict
>opinion of someone, and you're not a licensed pratitioner?
>

Yrac:
I'm certain that the law school you attended would be mortified to read the above statement by one of its alumni. (By the way, the word is spelled "libel". I know because I carry a $1 Million E&O insurance policy, and the word appears in it numerous times).

Son, we've been trying gently to tell you to wise up!

I'm not a weatherman, but I can tell when it's raining, by observation.

I'm not an auto mechanic, but I can tell when the radiator is leaking, by observation.

I'm not a food expert, but I can tell when a piece of meat is spoiled, by observation.

I've never met you, but I know a lot from observation. "Young" and "testing your wings" come to mind. What I don't observe is "maturity", and here's why that is so serious. My generation is ready to turn things over to yours. We know you'll make a lot of changes from the way we did things. That's okay. We did the same when WE took the reins.

Our concern is that you will not simply USE your rights and power, but that you will SQUANDER them. (Squander--to spend extravagantly or foolishly).

This goes far beyond whether you should be transmitting radio signals between the CB band and 28 MHz. The issue is integrity--a firm adherence to a code of moral or artistic values.

RLC:
>
>I wonder what the differences are in your behavior when in, and when not in,
>the presence of a cop.
>
Yrac:
That's a valid question for a young person to ask. Instead of "reinventing the wheel", you can observe those who are farther along the road of life to see if they are valid role models. And you should not be interested in someone as a mentor unless that individual "talks the talk and walks the walk."

In all likelihood, all you will ever know about me will be from my writings in the NG. Nevertheless, since I write quite a few posts, you will have an opportunity to observe whether I am CONSISTENT--which is the real question you're asking above. Use the same standard to judge what other users have written to you. Don't go along only with those who agree with your opinion. Nor should you automatically reject those who differ. Decide, instead, to look up to those who are what (and where) you want to be in a few years.

I have been pleased to see how many folks have given you sound, thoughtful advice in response to your posts. I can tell that many of them spent a long time composing their remarks, and I know that some typed their comments at great physical expense. Please don't let that be in vain. Cultivate the characteristics of honesty, integrity, fairness, receptiveness to new ideas, and maturity. Not only will you attract the interest of a lot of women(!), you'll be better prepared to handle the load that this older generation is trying to pass along to you and your peers.

73, and God bless,

Yrac

Not so in all cases. The law here in Texas is such that if someone comes on
someoneelse's property dark and is in the act of stealing something tangible then
the property owner is within his legal right to shoot to kill. That makes the
property owner not only
judge and jury but executioner as well.

Those "numbers" were used in the Eastern Bloc as codes for special
operatives. In 1988, We were tasked to copy many of these for decoding.
It would be interesting to see if someone could pinpoint the origin....

Most of thefreq's we copied were in Polish, Czech, and Russion.... if
there were some in English, it is possible that we did the same thing....
just my 2 cents worth.

P. Troiani

N3PEE

"But for every one of the liberated prisoners, the day comes when, looking
back on his camp experiences, he can no longer understand how he endured
it all. As the day of his liberation eventually came, when everything
seemed to him like a beautiful dream, so also comes the day comes when all
his camp experiences seem to him nothing but a nightmare.

"The crowning experience of all, for the homecoming man, is the wonderful
feeling that, after all he has suffered, there is nothing he need fear any
more -- except his God."

Robert Kotal, of Warrenton, NC and Austin, TX, passed away February 16th after a brief illness. Bob held the call sign K5RKX for many years, and had recently modified it under the vanity program to K5RK--his initials.

Mr. Kotal had been employed by IBM, prior to his retirement a few years ago. He held several patents for computer-related products.

An excellent craftsman with woodworking, Bob and his wife were restoring a 1700's mansion, which they saved from the wrecker's ball. He often joked that when your house has nearly 150 shutters, when you get them all painted, it's time to start over.

About 10 years ago, Bob and his wife adopted and raised their granddaughter when unfortunate circumstances struck the family. The new family unit became "the Three Musketeers", and served as an inspiration to everyone who knew them.

73, Bob. You will be missed.

I received the following message which says it all. By the way I coined the term "Barbie ham" to describe those hams that the old farts license when they go into the schools and run ham classes in which rarely even one kid EVER gets on the air or own equipment. The Barbie Hams are all for show.

From: ERIK BAGBY
To: BURT FISHER
Subj: INTERESTING HAMS-WHERE?
I wish you guys could come to Atlanta!! I am a 17 year old ham and have been licensed since 1985- and let me tell you how much I cannot agree more with you guys!! I have demonstrated amateur radio for SEVERAL of my classes- never seen so many confused and bored people. I mean, let's get real here- why would the average young person want to get into a hobby full of social oucasts when they can get into computers, drugs, booze,you name it!! I got into ham because I've got radio in my blood- but not everyone is like me!! And hey, we've got so many of those "barbie dolls" down here- just listening to all those old fart gutter scum talk about how their daughter passed her Tech is hilarious. I never hear them on the air! No wonder I put up a GMRS repeater- people can actually understand the concept of that!!

If any of you folks out there are curious to know what a
CW pileup sounds like, there were two huge ones raging on
40m thismorning - an E21 station on 7.005 (working simplex,
what a nightmare) and 9M0C, the DXpedition from Spratly Is.
on 7.022 QSX 7.027 MHz.

Local chatter has indicated that in the waning days of the
operation to Spratly (somewhere between China & the Philippines)
the pileups have diminished as many "no longer need to work
them" at this point.

These are dimished? Can't imagine what they were like...

There are no such things as absolutes. Yes, people did do this. However,
they were in the minority. Today, on the other hand, the tables have
turned, and they are in the majority.

You sure do like to post this message a lot, Glen. Do you have an autoposter/
spam bot that scans the subject field in r.r.a.m for keywords such as
"code" or "no-code"?

It wasn't much of a stretch at all. It just points out what a bunch of
hypocrites you all are.

Does this imply that you're going to go out and hunt freebanders and then
shoot to kill? If so then it like Burt Fisher says: "More tough talk from
gutless hams."

Masa is an easy target because he is immature, it has nothing to do with using English or Japanese. Masa joined the news group with bizarre posts like "how can I talk to police on police frequencies?" claiming he wanted to "thank them" for doing a good job. Other famous posts include wanting to know how to 'jam' FM broadcast stations and the like He spams the news group with advertisements for his "Professional" Canadian radio study guide, full of incorrect information and spelling errors, then he wonders why no one has sent him the $20 fee he asks for downloading the guide. As far as debating him in his native tongue, I guess if I were living in Japan and posting to a ham radio news group in Japanese I'd do a lot of reading and not jump in as an authority on things I know nothing about.

I don't know who you are Mr Townsend, but you could be me in another life. My sentiments exactly. Those two attributes suck all credibility from any one choosing to exibit them. There are times I get a tad cranky about a situation and become somewhat intolerant but it's not my nature and I get over it quick.

Thanks for your remarks.

___
SOS (..._____...) sounds quite a bit different than SOS (... ___ ...),
so no, not everyone's ears would perk up upon hearing what you spoke of.

Now, you'd also need to be able to copy the person's position, nature of
distress, type of assistance requested, number of people involved, et
cetera. So just being able to recognize ..._____... is not enough.

Let's get this off .misc and continue it on .policy.

Bellows, the good folks on r.r.shortwave, a non-amateur NG, are losing
patience with you. Why are you cross-posting to that NG?

Bellows wrote:
>And recieved by a person who could only understand SOS, which is
>probably 95% of the population. This situation only proves that knowing
>any more than SOS would have been meaningless to this (and most other)
>receiver of the distress call.

Again, you'd also need the ability to copy the person's position, nature
of distress, assistance required, number of people involved, et cetera.
Also, I don't believe 95% of the population would know what ..._____...
means (it's sent as one character, not three distinct letters).

Let's move off .misc with this topic, shall we?.

Hi Mike. Art has his opinions on both gentlemen and he does present valid points. We all have our likes and dislikes for different personality types. Art and I have been responding by e-mail because a detailed discussion of Mr. Clark does not belong on this news group.

> Art, take a pill and relax, please.

And if Art needs a pill to relax then maybe I do also.... (hi hi)

> It's just one mans opinion against your
> own, and we all use this forum for such things all the time!
> Mike in MO.

Well said. That is what the forum of many news groups is all about. A place to share opinions. Getting into heated discussions may be fun at times, but once flame wars have erupted, the thread usually gets completely off of topic and turns into a pissing contest between participants that will never agree and will always try to get in the last dig.

In future post to this thread I will attempt to make my comments directed to the subject of Wayne Green.

> will be interested in amateur radio.

Which they can now. *Anyone* can use ham radio to make contacts, even without a license. All that is required is that there is a properly licensed amateur radio operator acting as the control operator and that they operate in accordance with the rules and regulations.

> The amateur radio is not an entertainment (generally speaking for most
> of people). Many are looking entertainment outside of school hours or
> office hours or whatever.

Generally speaking, for most people, driving a car is not entertainment. But for people who *like* driving a car, maybe it is. Generally speaking, for most people, flying kites is not entertainment. But for those people who *like* flying kites, maybe it is. Generally speaking, for most people, amateur radio is not entertainment. But for those interested in amateur radio, maybe it it is. The point (because I know you won't be able to see it without me explaining it to you!) is that those who are looking for entertainment outside of school or office hours will tend to try to do what interests them. If they are interested in amateur radio, that's what they'll try to do. If they are interested in progressing through the license structure, then they will do whatever is necessary to progress. If they want to get on the air right away, then they'll visit a ham club, or an individual ham radio operator, and get on the air (even on the Extra Class sub-bands if the control operator is an Extra class licensee).

All you're doing, Masa, is trying to make excuses. As I've said to you on several occasions in private email, there are *many* reasons why code should not be a requirement for HF licensing. You just can't come up with any of them... you just make excuses, most of which are pretty dumb.

Yes.. there is a definite time/effectiveness curve. You still lack sufficient data for any scientific conclusions. Try repeating the experiment and graphing the occurrences of your name in both subject and text of posts over a one year period of abscence. You should see a definite roll-off after several months, and this may encourage you to continue the experiment for a few more years. Perhaps Rigley will collaborate with you on the experiment... After all, it could have something to do with your screen name, and so post data during an abscence of Rigley would make an interesting and possibly enlightening comparison. If Masa chooses to participate as well, no doubt the data would be useful in, say, a sociology or psychology project. Keep it going until he is ready to his Master's thesis.

I was in southern Utah once and heard one of these on 2 meters. It was in
English and was fairly clear. I dunno if it was somebody goofing off or not,
but it sure sounded like the same thing! This was probably late 80's.

Welcome back, Rambo! You popped up on my Buddy
>Window a couple of days ago,
and I tried sending an AOL Instant Message. I
>don't think it went through....

No, it didn't. In an effort to keep "peace" in my household (allow other family members to make and receive telephone calls, in other words), I make extensive use of the "Flash Session", allowing me to read and write all my messages while offline. Sorry 'bout that!

>Upon signing onto rec.radio.amateur.misc

Actually, if you read the messages, you will
>find your name is seldom mentioned
in the text. You know how it is....a
>subject line will run on almost forever,
even though the content of the
>postings has evolved into something else.

Funny. I saw several fresh postings relating to "CB Rambo", "Drew", Drew is Rigley" and other related items. Amazing how some people will continue to attack, unprovoked, even when the subject in question is nowhere around to defend himself. Typical of the majority of participants on this newsgroup. *sigh*

Oh. Pardon us for not changing the subject line in the postings. We
>mistakenly
believed you liked seeing your name "up in lights".

Again, I found several fresh posts relating to "CB Rambo", "Drew", "Drew is
Rigley/Rigley is Drew", etc. These items were posted after last Friday; well
after last Friday in some instances.

CB
>Rambo:
>After seven days of inactivity by "CB RAMBO", he remains the prime
>focus of
>this newsgroup. I counted over 50 postings to the "CB RAMBO"
>thread alone.

Yrac:
Why the sudden shift to the third person? By the way,
>you may be alarmed to

know that during your seven days of "inactivity", your
>screen name was in use,
checking mail and newsgroups using AOL Flash
>Sessions.

Why would I be "alarmed?" I am flattered, though a bit surprised, that you have thought enough of me to place me on your Buddy List. And yes, of course I have been online throughout the past week. Never said nor implied that I hadn't. I simply stated that I had not posted to rec.radio.amateur.misc since last Friday, February 13, 1998. A quick check of DejaNews (which so many of you seem to love to spend hours doing) will show this to be a true statement.

> I recommend any
>investigation center around Rigley Case; he seems
>to be able to mimic you in
>writing style, and in his thoughts on subjects
>such as Amateur radio,
freebanding, etc. Time-Stamped Posts from Rigley
>sometimes followed the AOL
Flash Sessions mentioned above.

Oh, by all means. Let's see you follow through on your prescribed course of action and take up the "investigation." Again, learn how to trace the posts of Rigley L. Case and you will find that they do not originate from an ISP within the state of Kansas. Again, you claim that I am "Drew from Kansas." You also strongly suggest that I am Rigley L. Case. For both of these statements to be true, Rigley L. Case's postings would have to originate from an ISP within the state of Kansas. Make sense? Let's see some "investigation" here. Dying to hear the results, as always.

> "CB RAMBO"
>serves an important purpose in your empty lives. He
>allows you to vent, to
>scream, to yell, kick, and holler. Better than
>kicking
>the dog or punching
>out your boss/wife/co-worker, right?

Yrac:
Yes. Your life serves a noble
>purpose. Thus assured, go in Peace.

At the beginning of this post, you stated "we wondered what happened to you." I took this as a sign of concern. And now, you're trying to get rid of me...already? Sheesh! Make up your mind, will ya? I'm getting very confused trying to follow your mood swings.

Hello All,

Does any one out there know if there is a mod for the new Alinco DJ-S11 radio?

I saw a mod for the DJ-S41 (the 440 version of this same radio) but I can't find one for the 2 meter version.

Any help is much appreciated, thanks.

The Tech Notes column in the Winter 1998 issue (the latest one) of
Communications Quarterly has a construction project for a "modern"
6-meter AM rig. It gives a short report on the activity in the New Hampshire
area: "Six-meter AM has never been a hot-bed of activity in New England
but it surely isn't dead."

I have to disagree with this one. It is like saying "before you learn to drive an automatic, you should learn to drive a straight stick". I say learn to use whatever you are planing to use. If you are going to use a keyer, then learn that...if you are going to use a straight key, learn that... and if you are going to use a "bug" learn that. This is the way to become proficient with the method you will use. You can learn the others later if you want to change..
Greg

Michael Negron wrote in message <6ciiar$4nn$1@newsd-112.bryant.webtv.net>...
Hello Eugene.

I would agree with the others that you may want to learn to use a straight key first. You can find inexpensive keys from MFJ and other companies. You may also try attending any hamfests comming up near you. I'm sure you'll find a good deal on a used key. I did. I paid $7 for a good condition key.

Good luck!

Mike W2VOS

It is not as impressive as a four or five year old passing any amateur
exam. Most children that age have yet to grasp the basics of literacy
much less the relative complexity of the basic electronic theory.

The QRZ site indicates that KB4TPP's e-mail address is :
wb36atl@aol.com. That is likely the e-mail address for WATL here in
Atlanta (channel 36 and part of the WB network). Perhaps Erik works
for WATL after school and on weekends and that is where the money came
from. It is funny that I remember reading ham-bashing posts a couple
years back in the newsgroups from a WATL employee. Perhaps it is the
same individual?
>>> 73's from the armpit of the south,

Perhaps Erik named Atlanta as Burt probably doesn't know where Smyrna is. In any case KB4TPP can always move further OTP (outside the perimeter). I hear South Dennis MA is a happening spot.

best regardses (73's) de n4jvp
Fritz

BTW - Will K1OIK renew his ticket when it expires this June?

Carson Valley Radio Club Sponsors Classes

The Carson Valley Radio Club will be sponsoring a nine-week Technician licensing class beginning Wednesday, March 4th, at the Minden/Tahoe (Douglas County) Airport, located between Minden and Carson City. Registrations will be accepted up to the second class meeting.

The class will be taught by experienced instructors Bob Grissom, KI7GN, Harry Hampton, N7MBO, and Dick Flanagan, W6OLD, and will culminate in a special VE testing session. This will be the fourth consecutive year this dedicated team has taught these successful classes.

The classes will be held every Wednesday evening from 6:30 to 9:30 p.m., at the Sierra Front Interagency Dispatch Center, 2311 Firebrand Road, Minden. All instruction will be free, with students required to provide only the text book, "Now You're Talking," 3rd Edition by ARRL, which will be available for sale at the meetings.

For more information, please contact Dick Flanagan, W6OLD, at (702) 267-4900, via e-mail at w6old@qsl.net, or visit the CVRC Web Site at http://www.qsl.net/w7di/.

Gee Jeff ... why doesn't that surprise me? I guess it's because
it's suitably backward and archaic to fit your style of doing
(seems to be) just about EVERYTHING ...

Wake up! It's 1999, not 1979 ...

The Spratley Islands make for an interesting political phenomenon.
No less than six nations claim ownership (including China,
Viet Nam, Brunei, the Philippines, Taiwan, Malaysia). Why?
Valuable oil and gas reserves are suspected to lie beneath
the isles. China has gone so far as to hire an American oil
exploration team to conduct test drilling (which the Vietnamese
navy periodically fires upon), and has stationed troops in
waist-deep water (many of the isles are really just
submerged rocks) standing guard; these soldiers occasionally
lob bullets at patrolling Vietnamese naval boats.

Heck of a place to hold a DXpedition!

Jeff KH2PZ / KH6

I have one of such devices (it was originally on a garage door) with 2 key fobs, single channel, for each push a relay is momentarily contacted. I experimented with it and found it had range of over 200 feet or so. I would take $40 for it....

DNULT:
Masa is trying to express himself in a language that is not native to him.
If you had to write and post in his native country using his language and
alphabet you would probably have a difficult time making your case for
keeping the code. Masa is an easy target for people like you and some of the
others to attack. If you don't like what he posted counter with an argument
in his native language. I doubt you will agree to debate him in his native
language since that would give him the same advantage you and others have
over him by coming from a culture that speaks and writes English.

2179. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-20 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cj0i4$o42@bgtnsc02.worldnet.att.net>
Source record: 177752

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

I currently have for sale a clean copy of "Allied Dictionary of Electronic Terms", edited by Robert Beam, published in 1962 by Allied Radio. The 83 page book has card covers, and is in fine condition, with no page tears or marks of any kind. The dictionary contains the "concise definitions of words used in radio, television and electronics". Includes several small illustrations mixed in with the definitions. Available for $3 plus $2 postage (within the US). If interested, please email to "Oldbooks78@aol.com" for additional info. Thanks, and best regards.

Dave

Amplifiers for sale.....

600W PEP, 400W continuous, wideband AB1 linear amplifier usable up to 2 meters. Single drawer unit includes kilovac COR switching. Amp has thermal protection, Hi power combiner, bias switching and uses 4 MRF175GV dual MOSFET transistors. Requires 28VDC @ 70A power source (such as 2 Astron R70A's in series). Asking $500 or best offer.

220 MHz amplifier. 5W in 120W out. Built in power supply; variable input attenuator; overload protection; interlock; extensive output filtering; and COR. 100% duty cycle amp. Asking $300 or best offer.

250W 160-10M solid state base amplifier with power supply, thermal and overdrive protection, output meter, and COR circuitry. $200.

100W Continuous duty wideband amplifier module usable from 400-1000Mhz. Requires 28VDC source. Asking $300 or best offer.

Source record: 177759

When this was posted by an observant NG user:
> Les see...we gots Drew Durigan aka MN Maniac aka
>>CB Dimbulb aka Rigley Case --the "male" equivalent to Sybil ha ha ha.
......

>>Get a life and again, be a man and admit you are found out

RL Case replied:
>
>Your observations are nothing more lame attempts in trying to prove
>something that you can't prove. Try again.

Yrac explains:
Notice that there is not a denial that all these accounts belong to the same person. The response simply says, "You can't prove it."

This is setting up an "escape" route for the day actual proof is delivered. The individual then can respond, "I never SAID I wasn't both people--go back through the posts and read it for yourself."

A similar situation developed concerning posts in rec.radio.cb from CB Rambo on the subject of operating in the 10Meter ham band without a license. Rambo's posts consistently attacked Amateur Radio and encouraged illegal operation by saying that the CBers had already taken over the ham band, that there was nothing the hams could do about it, and that the FCC was a paper tiger and would not react. When all this was reported in this NG, Rambo was quick to point out that he never said that he personally operated in the manner he advocated, and he invited us to sift through previous postings to prove otherwise.

It's kinda like that guy Ripley who told the world about four-headed sheep, Lincoln's portrait in a sea shell, and other weird stuff. Ripley never said these things were true. He simply said, "Believe It or Not."

Quoting from Erik Bagby's letter to Burt Fisher:
>I have demonstrated amateur radio for SEVERAL of my
>> classes- never seen so many confused and bored people. I mean, let's get
>> real here- why would the average young person want to get into a hobby
>> full of social oucasts when they can get into computers, drugs,
booze.....

Yrac:
If this is an example of Erik's personal skills, I'm not surprised that his demo's failed to produce any intrest in Amateur radio. Perhaps he is not the best spokesperson for our hobby......

> And hey, we've got so many of those
>> "barbie dolls" down here- just listening to all those old fart gutter
>> scum talk about how their daughter passed her Tech is hilarious. I never
>> hear them on the air!

Yrac:
Burt, please pass the following theories back to Erik:
(1) He doesn't hear them because he doesn't operate much on the local repeaters. In my area, there are many brand-new call signs at any given time.
(2) Perhaps Erik's smart-ass attitude doesn't make them feel welcome on the repeaters where he operates.
(3) Many of the daughters are joining their family members in using simplex as an "intercom" around the house and neighborhood.

>No wonder I put up a GMRS repeater- people can
>> actually understand the concept of that!!

This is an impressive feat for a 17-year old. I recently finished compiling an estimate of what it would cost to put up a GMRS repeater for a REACT-style group. The repeater was several thousand dollars. The radio units were a couple of hundred dollars apiece. When I was 17 years old, I could not have afforded the license fees for GMRS, let alone buying equipment like that.

>> 73's from the armpit of the south,
>> Erik M. Bagby/KB4TPP

Yrac:
By the way, Erik, the Greater Atlanta Chamber of Commerce called....they would like a word with you at your convenience. Thanks.

Is Glen so egotistical that he thinks that someone is going to have
their feelings hurt if Glen puts them in a kill file, what ever that is.
"You better do as I say or I will ignore you, I'll show You".
That seems to be his attitude. Then the dumb butt when he
tries to jump on someone for a post in .misc he cross posts it
in .policy. Get a life Glen, oh I forgot, you put me in that
terrible kill file. Ohy well, maybe someone will copy this
so you get to see it anyway.

Boy... don't you just hate the way aol's in'house software tries to take everybody by the hand and lead them down the same path and hope to hell nobody takes off and gets lost in the cyberwoods? I'm talking about aol's Personal Publisher. AOL gives you 10 megs of web space, but any one screen name only can use 2 megs. Well, I tried to use PP to create a page for some pics and a program or two on another screen name, and everything went all to hell. I had to do what I should have been made to do in the first place... figure out how to put html together. Anyway, I got the new page working...

http://members.aol.com/AB5VHMM/pix.html

and there is a shot of the ship and a shot of the shack. There is also a Rules of the Road Q&A program I wrote a couple of years ago, and it was pretty slick for it's day... I also wrote the question databases for 3 of the ham exams but they are no longer current. Somebody could cut and paste the new ones into a fresh database using the tools in the program menu. It was shareware, then it was straight cash and carry, but it never took off because I couldn't take time to market it. Anyway, as of today, it is public domain software and you can use it, sell it, decompile it, compost it, whatever. I wrote it in Visual Basic 3.0 for Windows. It runs under 3.1 and 95, but you may have to add a share statement to your autoexec.bat in 3.1 Just do what the prompt tells you to do. I no longer have the source code, by the way.

Best results are had by downloading to your hard drive and unzipping to a floppy (1.44M). You will then have an old-fashioned Windows Setup disk. Enjoy or ignore... all the same to me.

You should also be able to get to the new page via my main page in my sig.

I got a lot of good suggestions and hintsfrom visitors to my original page and I learned quite a bit. Any comments on the new page are welcome. Thanks all!

>Wake up! It's 1999, not 1979 ...

I *knew* you'd get a kick out of that, Carl. Now, next time you
log on from at home, note the amount of time it takes you to get
into your account from the time you power up your PC (boots up,
then to your communications program, it dials, you log in with
name and password). Compare your time to the 20 seconds it takes
me to get into my account from the time I power up my terminal.
No waiting for it to boot up. I just hit F1 (dials) F2 (my login)
F3 (my password) and F4 (set term=wyse30). Done. Twenty seconds.

It might be 1985 technology (the modem is a 28.8 - 1995 technology)
but like CW, it works just fine for me (email and the newsgroups).

Oh, here's something else that will cause you heartburn - I don't
own a car, only a bicycle. Imagine that - here I live in a 10th
floor ocean-front condo, and only have a bike (and sailboat) for
transportation.

Just because it is posted elsewhere, or is on someone's website, doesn't
make it a true story. I could easily post a lie here, and give you
several other places to reference my lie also.

Great. I think just about everyone knows how to send and receive SOS,
and the listener would not have understood any other Morse Code, so this
still does not show a need for the Code requirement. Unless you want to
have everyone show that they know SOS in Code.

And recieved by a person who could only understand SOS, which is
probably 95% of the population. This situation only proves that knowing
any more than SOS would have been meaningless to this (and most other)
receiver of the distress call.

Godel, Escher, Bach: An Eternal Golden Braid
(a metaphorical fugue on minds and
machines in the spirit of Lewis Carroll)
by Douglas Hofstadter
Pulitzer Prize Winner 1980.

The Mind's I: Fantasies and Reflections
on Self and Soul
Composed and arranged by Douglas Hofstadter

and Daniel Dennett.

Web Review: http://www.california.com/~rpcman/TMI.HTM

Both are Paperback, in well-thumbed condition.
BOTH for $15.00

Metamagical Themas: Questing for the Essence of Mind and Pattern
by Douglas Hofstadter
Hardcover! Great condition.....$18.00

Metamagical Themas Blurbs:

Enormously ambitious and hugely interesting...Hofstadter's
display of information will capture the imagination.
-- The New York Times Book Review

Douglas Hofstadter is a scientist with the inspired madness of a poet.
-- New Republic

A rich and complex work...The closest thing imaginable
to taking a voyage through a mind.
-- San Francisco Chronicle

'Delight' is the operational word...Hofstadter, for all his
brilliance and profundity, has fun with the world.
-- Chicago Tribune

The incredible Dr. Hofstadter is back, in golden-braid form,
with a collection of wide-ranging essays that swarm with
extraordinary ideas, brilliant fables, deep philosophical
questions, and Carrollian word play....Like his previous Godel,
Escher, Bach, the new book glitters with Godelian self-reference
jokes, Escherlike illustrations, and Bachlike fugues.
-- Martin Gardner

Douglas Hoftadter has ushered in a new, more personal approach
to science writing. Ideas matter; and so do the people that have them.
-- Washington Post Book World

>software. He probably still runs a VIC-20 for everything in his shack.
>
>

So what do you want people to do with all the V20s, add them to the already sickening wasteful crap we keep expecting the planet to re-absorb via landfills? If it is still useful, and if somebody is resourceful enough to use it, he should use it. If he can't figure out how to use it, he should give it away to somebody whi is smart enough to use it. I hate it when even my fellow consumers get so taken in by the beast that they see no way but to buy newer adnd better twice a year. Toss the old... the computer you paid $1800 bucks for a year ago is garbage now. Do you realize how much beer you could buy with that?

Look... here's what they are doing... Making sure that everytime we buy a new gadget or program, it makes the old stuff ALL just a little more obsolete. Buy a new program... take it home... Surprise! you gotta have W95 to run it! Go get W95... Surprise! You need a new computer to run the OS! Set up your old software with the new OS... Surprise! Half of the old stuff doesn't DO 32 bit! You gotta upgrade! Get on the Net... Surprise! all the websites have so much video, graphics, sound, cute little java applets, that you gotta get this and that and this and that... Which means we gotta get a new OS , a new "box", all new programs all over again... DO YOU GET THE PICTURE?

For applications (real world... not programs) where you need MASSIVE amounts of storage, speed, and sheer number-crunchiness, the newest technology is a Godsend. For web browsing, etc, things are really out of hand. We have the ability to make things simpler and instead we make them more complex... because "certain" people make money on our semesterly upgrade habit. They have the perfect marketing approach... except it stinks when you look at it with a sober eye... THE WONDERFUL STUFF I SOLD YOU A FEW MONTHS AGO IS GARBAGE NOW BECAUSE I HAVE NEWER STUFF FOR YOU THAT MAKES THE OLD OBSOLETE. ME AND MY FRIENDS IN THE INDUSTRY ARE USING OUR CONNECTIONS AND TECHNOLOGICAL INTERDEPENDENCIES TO ENSURE THAT YOU WILL FEEL LIKE THE SANDLOT KID WITH A HAND-ME-DOWN GLOVE IF YOU DO NOT BUY THIS WONDERFUL STUFF NOW, BUT HURRY OR IT WILL BE OBSOLETE TOO! And they say it so fast and so convincing that not only do we bow before the near inevitability of it, but we grin like shoe-shine boys as we jump through the marketing hoops and spend money for stuff we just got through spending money for.

There is nothing obsolete if there is somebody left alive clever enough to make it work good enough to do the task at hand. I guess hams were the last group of people I would expect to forget that, but it seems to be happening.

Awwww, Carl, look at it this way... He's keeping a piece of old rubbish out of the landfill and serving a seful purpose. He's utilizing a resource that would otherwise just add to all the garbage we are piling up all over the place. Jeff is doing something we should all be doing more of, which is getting us a little bit away from a purely consumption-driven economy.

I personally resent being expected to buy a new computer every six months, and got along happily with a used true-blue AT until 4 years ago when I sprung for a brand new 486 notebook at the urging of others who said I didn't know what I was missing. I have a 100 MHz pentium now, and I am NOT buying a new machine for at least the next three years, no matter what. If somebody made me an offer I couldn't refuse on an old 386 machine, though, I might snap it up for hamming with! Why waste it? Why should we just toss a computer we paid maybe a months salary for, just because the Gates gang / Intel consortium pushes "more powerful" software and hardware at us and tells us the stuff we bought 6 months ago is now obsolete and virtually unusable?

There;s a lot of hams still using Sinclairs, Commodores, etc for all kinds of really neat stuff. Yeah... when it breaks and it's gonna cost a hundred bucks to fix, junk it or toss it. But... If it works, do the Earth a favor and use it... keep it out of the dump. At least give it to somebody who can use it.

Chris... I wrote a program a year or two ago that logs, checks for dupes, accesses a callsign database (the default is Sam's, installed to a HD but is changeable) and prints a standard format QSL. You could print on the back of a photo, I guess. I'll see if I can dig it up if you want it. I stopped QSLing altogether a couple of years ago, and I no longer keep a log either... distracts from actually operating... I don't do awards or contests, and I finally quit feeling guilty about all the guys who just gotta have another card from "5" or from TX or "/MM" or "/QRP? or whatever. I only work hams who just like to operate if I canhelp it

Well I digress as usual. HI Anyway, It fits on a single setup disk and I know it works in 3.1 but I haven't messed with it or even seen it since upping to w95. I'll look and see if I have it here at the house.

A mic being keyed to send code would not be very prominent, it would
not stand out such as a CW keyed signal. I don't know if I would pick up
on it. Seems Tracy said he had to listen for a bit to make sure that he was
hearing it. Maybe as he was active on code helped him pick up on it, but I
won't make any claims as to that.

I don't expect the FCC to use that event as a reason for keeping code,
nor do I see them using it as a reason for dis-continuing the code requirement
either.

Hello Bob, the problem is that the person who posted the query in the UK. Internet Gateways (and phone patches) are ILLEGAL under the UK license conditions, and with a few rare exceptions the UK packet network still mainly runs at 1200, with occasional 9600 ports, plus the odd once-in-a blue-moon high speed microwave band port. The information that he has been given is correct, specifically for the UK.

Last week at this time, I decided to try an experiment. In an effort to restore goodwill and civility to this newsgroup, I embarked on a self-imposed ban of posting to rec.radio.amateur.misc. I promised myself that I would refrain from making any contributions to this newsgroup for a period of one week. I did this because, according to several "regulars" on rec.radio.amateur.misc, "CB RAMBO" was declared to be the prime source of hate, discontent, flaming, trolling, and general chaos on this newsgroup. I wanted to determine whether or not this was true. Applying their logic, all the negativity on this newsgroup should disappear along with "CB RAMBO's" presence on said newsgroup, right?

Upon signing onto rec.radio.amateur.misc for the first time since Friday, February 13, 1998, I find over 100 posts dealing with subjects such as "CB RAMBO", "IS RAMBO A HAM?", "CHUNKY DREW", and other related nonsense. Geez, the guy decided to leave...you'd think the discussions would return to amateur radio: contesting, equipment, hamfests, antennas, etc. But it was not to be. After seven days of inactivity by "CB RAMBO", he remains the prime focus of this newsgroup. I counted over 50 postings to the "CB RAMBO" thread alone. Incredible!

Face it. "CB RAMBO" serves an important purpose in your empty lives. He allows you to vent, to scream, to yell, kick, and holler. Better than kicking the dog or punching out your boss/wife/co-worker, right? Now that the experiment has been completed (and you have all failed the test), let's get back to the usual hate, agitation, name-calling, and libelous personal attacks that comprise the majority of the content on rec.radio.amateur.misc. Let the flaming begin!

Oh...by the way...Rigley and I are not the same person. If you knew half as much about the Internet as you do about Morse code, you'd realize that all posts CAN be traced back to their original and "real" domain name. You claim that I am "Drew" from Kansas. If you trace Rigley's posts, you will learn that they do not originate from a Kansas-based ISP. But of course, you HAMBOS know everything, so who am I to argue with the likes of you?

"WHERE'S THAT BIG 'OL RADIO HAMBO?"

Yrac:
Why the sudden shift to the third person? By the way, you may be alarmed to know that during your seven days of "inactivity", your screen name was in use, checking mail and newsgroups using AOL Flash Sessions. I recommend any investigation center around Rigley Case; he seems to be able to mimic you in writing style, and in his thoughts on subjects such as Amateur radio, freebanding, etc. Time-Stamped Posts from Rigley sometimes followed the AOL Flash Sessions mentioned above.

February 20, 1998

Dear President Stafford,

You have not responded to my letter of September 27, 1997 where I questioned why I was removed a VE. I have not violated any provisions of 97.525 or any other aspect of F.C.C. regulations that govern this hobby. Thus unless you restore my VE status FORTHWITH I shall send the following letter to newspaper editors throughout the country (on a staggered basis). This is a threat. I believe fully in what follows. The only reason I have not written this letter before was I was not motivated to actually send it.

Dear Editor,

There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.

The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C

commissioner Newton Minow popularized).

>February 13, 1998, I find over 100 posts dealing with subjects such as "CB
>RAMBO", "IS RAMBO A HAM?", "CHUNKY DREW", and other related nonsense.

Actually, if you read the messages, you will find your name is seldom mentioned
in the text. You know how it is....a subject line will run on almost forever,
even though the content of the postings has evolved into something else.

>After seven days of inactivity by "CB RAMBO", he remains the prime focus of
>this newsgroup. I counted over 50 postings to the "CB RAMBO" thread alone.

You'd have to quite posting 30 to 45 days for all the water to drain out of the
tub. Some folks don't read the NG very often; others are new and are trying to
catch up.

>you'd think the discussions would return to amateur
>radio: contesting, equipment, hamfests, antennas, etc.

It did. The NoCode discussion has gone elsewhere, for the most part, and there
are lots of new posts about equipment, hamfests, and the usual requests for
"mods".

Anyway, welcome back. Hope it wasn't illness that kept you away.

K5PF

2216. HAMFEST - Lindenhurst , LI - March 8

Played with one in Akihabara, aka: ham radio wonderland in Tokyo, the biggest ham radio store, called Rocket (go figure) had one on display. I got to tune around and it sounded great. Did not get a chance to TX but seems like a great radio for the $$$ considering the over priced satellite radios like the Icom 821 or Yaesu 736. Specs look good though.

They did not have any inventory to sell. They are taking backorders. List price is 210000 yes, street price was quoted at about 165000 yen. Converted to $$ thats about $1,700 list and $1,350 street. I can't believe it will sell for less than $1,700 in the US but that is a guess. My overall impression is that the specs are good, the features are great, the price will be very attractive, and it is compact to boot. Only downside is that it is a bit cheap on the esthetic side. The tuning knob and shuttle are kinda sloppy and the rubbery buttons have painted lettering that may rub off over time.
All things considered, it will be hard to beat if you want a satellite / HF rig that won't mortgage the kids.

>,256K cache,16MB, WIN95, which will more than meet the needs of the
>Packet radio interface.

First, all the packet gateways I know about are Amateur Radio packet
gateways, so to gain access, you will need an Amateur Radio license.
Second, not all the traffic carried on the Internet is permissible under
an Amateur Radio license in many countries, including, I think, the UK.

A group of BC Amateurs has designed and built a 56 K radio/modem currently
used to connect a number of sites together, including a link to the
Internet. I understand they're presently designing a new one that will
basically have two connections plus power - an ethernet connector and an
antenna connection.

They're presently using the 430-440 MHz band with about 85-100 KHz
bandwidth, although the goal down the road is to go up in frequency to

just under 6 GHz so that the bandwidth for a T1 connection will be available.

So, in conclusion, if I were you, I'd find a knowledgable person at the RSGB who can tell you what is possible under UK rules. They would also be able to steer you to active packet people in the UK.

2233. Extra Class Couples Club?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-21 00:00:00 UTC
From: dick@libelle.com
Message-ID: <dick-ya02408000R2102981815500001@news.newsguy.com>

Several years ago there was an article in QST -- it might even have been in the Strays column -- about a club or other organization made up of married couples where both held Extra Class licenses.

I didn't pay any attention to it at the time, but now that my wife upgraded to Extra today, it suddenly becomes relevant. Can anyone point me to this organization?

Thanks.

73, Dick

Hello.

This is to notify that one of the pro-CWers is subscribing something
[e-mail list] by using my e-mail address without my consent.

This is not acceptable. It is no better than posting by using
someone else's e-mail address.

You better beware when "we" find out who is responsible for this (and
I almost know who he is... only I need to do is to check the domain).

In fact, there were some legal cases of using someone else's e-mail
address. I also do not hesitate to take you to court.

Please remember, it is a criminal activity.

Please do not poke fun about this.

Thank you for your consideration in this manner.

2239. Why Beacons?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-21 00:00:00 UTC
From: k5pf@aol.com
Message-ID: <19980221133901.IAA19739@ladder03.news.aol.com>
Source record: 177591

>Such folks seem to love
>the title "repeater owner" (and "beacon owner").
>
>

K5PF says:
I have never owned a repeater, but as a beacon operator, I wish to respond.

Many years ago, 10 Meters suffered a period of under-utilization because folks would tune across the entire band and, hearing no signals, would conclude that 10 Meters was "dead". The solution was to get Amateur volunters to dedicate a transmitter, antenna, and keying unit to create "beacons", or radio transmitters whose sole purpose was to announce their presence. Today, one has only to scan between 28.2 and 28.3 to determine if the band is open. If you can hear a beacon, you probably will have success calling CQ on what appears to be a "dead" band. Beacons also perform the same function on VHF and UHF frequencies.

Anyone who wants to glory in the title of "beacon owner" is invited to try his/her hand at keeping a transmitter on the air, 24 hours a day. In addition to the wear/tear on the equipment, you will have to contend with the power bill, repairs to the antenna, and (if you are so inclinded), costs for printing and mailing over 100 QSL cards per year. Remember, that's money out of the "radio budget" that you won't be spending at hamfests!

As with building repeaters, there is a certain amount of ego satisfaction for a beacon owner; his call sign is known to 10 Meter operators around the world. But the fact that most individually-owned beacons have a life of about three years tells me that the glory can't override the problems and expenses of keeping the station active. The longest running beacons are those operated by clubs, where the expense and work is shared.

So why do I and a handful of others hang in there? Well, a lot of it has to do with the nice comments folks put on their QSL cards, thanking us for providing the service. The Lord has blessed me with the financial strength to be able to pour a couple of hundred dollars per year into the hobby to help others. I also have a strong conviction that beacons will increase the overall use of the 10 Meter band, which will help in our fight to retain it for future generations of hams.

> multiple choice format. The examinee knows the actual questions
> and answers ahead of time.

So? I learned A LOT from reading the question/answer books. Also, once someone gets into Ham radio, they tend to learn more from books and other "Elmers" to get depth behind the answers.

> The average age of today□s ham is well over 50 whereas when I was
> first licensed the average age was 27.

Did you ever read scripture? Respect your elders!

> Hams are still communicating at 1200 baud when internet users fly
> along at 40 times that speed.

So? They enjoy it. Go bother someone else and leave them to their hobby.

BTW, I'm going to start a 128 Kbps packet repeater club here in St. louis. The radios (TNCs) are under $500.

> As far as international goodwill, most hams rarely ask a foreign
> station anything more than what his equipment is, they do not care

> more foreign countries

It's called a HOBBY. Is yours harrassing other people needlessly? Buzz off!

> did you know both Hawaii and Alaska are separate □ham□ countries?

Really? Cool...

> If you have a scanner listen to frequencies between 145 MHZ-148 MHZ
> and listen to the content of the conversation. These are valuable

> frequencies that other public service and commercial interests could
> use PRODUCTIVELY.

We're talking about only 3 MHz of bandwidth! Commercial television (according to Newton N. Minnow, whom you cite) is REALLY a vast wasteland and uses up A LOT more bandwidth. Of course, that will all change in the next couple years with the adoption of DTV.

> Cell phones have replaced the need for most emergency ham
> communications in this country.

Until a disaster hits, then they're useless for several days. Hams carry on through the adversity.

> Hams use many other frequencies for little more than a discussion of
> personal medical ailments.

It's their privilege. They passed the tests.

> Worse they cause interference to other services (like your TV) and
> they erect large towers and guess what, there is nothing you can do
> about it.

Usually only Channel 2, and it can be easily prevented by using the appropriate filters.

> The F.C.C. is too underfunded to respond to citizen interference
> complaints and the ham radio lobby (American Radio Relay League) has
> caused both state and federal governments to pass laws that prohibit
> towns from controlling these large antennas.

In reality, towns, subdivisions, condos, etc. and still can (and do) enforce restrictive covenents.

> The frequencies that hams use are for the use of everyone not their
> personal fiefdom.

According to the FCC they are.

> It is time Congress conducted hearings and investigated whether ham
> radio has become the vast wasteland (a term that former F.C.C
> commissioner Newton Minow popularized).

I believe they have more important things to deal with.

Jeremy,

Check out:

http://www.cdi2.com/build_it

But why not buy one off the shelf? For instance, Alinco, Kenwood, Icom,
Yaesu, etc. sell in-band and cross-band mobile repeaters. You just need
a 12V power supply, some coax and a dual band omni antenna.

Later,

Ian,

I've been researching what it would take to implement a high-speed amateur packet Internet digipeater here in St. Louis. There's lot of problems, like restrictions against commerce on the Ham bands, restrictons against sending encrypted files, other folks reading your emails, etc.

Fortunately, I have a friend who runs a small ISP, and is willing to set up a digipeater in the non-licensed 900 MHz ISM (Industial/Scientific/Medical) band. His ISP only has an 128 Kbps ISDN connection to the net, so we're probably going to use 115 Kbps data radios, which are relatively inexpensive and run about 4 watts. His end will use an omnidirectional antenna, while my end will use a high gain yagi.

For instance, this is just one company that provides such equipment:

http://www.utilicom.com

Cheers!

I don't think it matters what you use to send, as long as you know what
it is supposed to sound like first. A keyer can help your sending by forcing
proper element timing and forcing a consistent speed.

A number of us have been advocating following the most recent
example of the professionals in regard to Morse Code. Glad to
see you're finally coming around.

Because you are a nasty, bitter old man; one who has nothing better to
do with his life than sit around posting trolls to USENET so you can
watch the replies you get, hence increasing your perception of your
self-worth.

I think I'll fax a couple of letters out this afternoon to the regional
section and division directors, as well as the ARRL Board of Directors,
Bart Jahnke, Dave Summer, and the rest of my buddies down at the ARRL,
telling them what a wonderful job they have done by refusing to renew
your VE credentials. A wiser decision could not have been forthcoming
from the League.

I can only hope that they have the same foresight to return your
ARRL membership renewal check the next time it shows up.

Hmmm.... sounds like you're a bit disdainful of repeaters and
repeater owners. Apprently this isn't a part of amateur radio
you enjoy?

While I'm not a proponent of pure "ego" repeaters, there is a real
advantage to a level of redundancy. In a disaster, many repeaters
will drop off the air; having more than one with the same coverage
means that there's a chance one will still be working ;-)

> Heehee - I can still remember John Mackey coming aboard and proclaiming
> in every one of his posts "I own the Portland 147.435 repeater!" Almost
> anyone can slap together a rptr using two transceivers in a matter of
> a few hours.

Careful, Jeff. You seem to condemn people for building something in
amateur radio that just takes a few hours. What if we were talking
about something that interests you, like 40m QRP Morse code? Heck,
almost anyone can slap together an OOK Morse transmitter in a matter
of a few hours.

By the way, most repeaters require much more than a few hours of work
to build, and much more than a few hours to maintain and enhance.
I get the impression you've never built or maintained a repeater
at all, and your comments come as a bit of an insult to the good
people that maintain open repeaters at no cost to the users.

From Yrac:

When the car stopped in front of a weathered ranch house, child-service caseworker Laurel Anderson got out first. "You're going to like the Potters," she told the boy with her. Mark Bissonette, Jr., looked around at the mountains rising up out of Oregon's Willamette Valley. He seemed dubious.

Inside, Tom and Maryann Potter greeted them warmly, and Anderson left. Walking to her car, she beseeched the surrounding silence, "Please let this work--we have nowhere else to turn."

Not yet in the sixth grade, Mark was a handful.....Mark lied, vandalized his school and stole from his classmates. Diagnosed with attention deficit disorder, he talked compulsively, denying or justifying or gloating about what he had done. Often he lashed out with his fists. He had already been turned out of two foster homes.

That's why he was brought to the Potters'. They have been making a home for boys no one else wants--boys who are down to their last chance. Two troubled boys were already living there the summer evening Laurel Anderson dropped Mark off, plus two of the Potters' own kids. "We're all one family here," Tom told Mark. "We stand or fall together. You think you want to come live here?"

"What do I gotta do?" Mark asked suspiciously.

"Love us. The way we'll love you. The way families do."

Mark smirked. "What do I REALLY gotta do?

Tom Potter hooked a forefinger inside the boy's shirt and pulled him face to face. "I already told you. Love. Do you know how to love?"

The boy shook his head no.

"Well, the first thing is, you quit making a life out of feeling sorry for yourself. Love is a two-way street. You want it? You have to give it."

Steve -

You may not want to use a printer in the UK because of postage costs,
etc, but I can really recommend a company called FDS Graphics. Their
address is

The Studio
Retail Park Close
Marsh Barton
Exeter EX2 8LG
UK

Telephone +(44) 1392 20-33-21

I recently had a batch printed and the quality is excellent. They will
scan in a colour photograph that you supply, back and front, and you can
either let them do the design or give them a sketch. You might like to
send for their nformation pack.

Regards

2266. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-21 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cnelj$fu6@bgtnsc02.worldnet.att.net>
Source record: 177618

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

And it won't be Gatesy who'll be paying for it.

>I too think for better communications, much improved speeds and
>services, it would be better to connect to the NET NOT via a modem and
>PHONE line, and to dispense with that archic part of the link
>altogther. So I am not the only one who thinks the modem phone link is
>a bad idea.

Then try getting B.T. and the other telecomms sharks
to make ISDN more attractive to you and me, for a
start. You might also suggest to the authorities that
some of these bloody amateurs be moved out of the
VHF/UHF/SHF spectrum they occupy* to make way for the
sort of free, high-speed Internet access you crave.

* ...or don't occupy, depending on your line of sight.

I concure. I rarely agree with anything Gary Coffman writes, but one
thing he's mentioned repeatedly that I do agree with, is that an
amateur test should be thought of as an Entrance Exam, not a Final
Exam. Testing for knowledge of RF, and in general, electrical safety,
and the operating rules and procedures, are the foremost items one
needs to know.

>> The average age of today=92s ham is well over 50 whereas when I was
>> first licensed the average age was 27.

When you got licensed, ham radio itself was only 30-40 years old.
So of course the average age of amateurs has gone up - the age of
radio has gone up, too, and thus, so have its early users.

Hi Tim - I'm not familiar with TapeTenna, but what comes to mind (tape+antenna) is the burglar alarm metal foil adhesive tape that you see on the windows of some commercial businesses. A V/UHF dipole, J-pole, 5/8 wave vertical, or even a beam could be affixed onto a window utilizing that tape. (Has anyone tried this?)

What I'm curious about is what the UK third-party traffic rules have to say about this. This sort of use is clearly beyond the scope of "transmissions of a technical nature whose importance does not justify the use of the public telecommunications infrastructure" (paraphrase of the Canadian regulations). What you propose would certainly be illegal in Canada.

I never power down my main machine ... it runs on a UPS and serves
as a server on my (in-home) thin-coax ethernet LAN. It also runs
a combination proxy server/firewall package that allows any machine
on the LAN to access the internet via the connection in the server
... currently a 56kb modem ... when we move from the apartment into
our own home I will pop for the modest increase from my current
expense of 16.95/mo. for unlimited dial-up access, plus the cost of
the dedicated phone line at about the same (IOW ~$35/mo total) to the
$49.95/mo. for full-time (static IP address) 512kbps (or faster) cable
modem service. I'd have the cable modem now, but can't justify the
installation when I'm not planning to stay here in the apartment.

Anyway, when I use an application (from any machine on the LAN) that
needs to access the net, the modem automagically dials, connects, and
logs on ... takes about 15-20 seconds

Actually, for his license to expire in 2001, he had to do something
in 1991 since Amateur licenses now run for 10 year terms. I would
suggest that he moved or upgraded from either tech or novice for
the last update.

I know I'm going to eventually regret responding to a "Burt" post, but
how old is the above post? This year, the chap in question should
probably be 23 years old. Before the FCC eliminated the dob info,
I would have looked it up, wait, I've now looked it up on an old
QRZ CD, the ham in question was born in 1975, so he must have
posted the above in 1992, which is six years ago. What's the point
now? Six years ago in many ways is an eternity in terms of attitude
and radio practices. Ham radio isn't growing with young hams still,
but you're still posting things from 1992 if the chap didn't lie about
his age!

> The amateur radio is not an entertainment

You say that because you don't own a soldering gun. If you were a builder, you'd be entertained for hours each week building and modifying and tweeking transmitters, receivers, station accessories, antennas, et cetera. Contacting other stations with gear you've built yourself is one of the most entertaining aspects this hobby has to offer. Self-training in radio and electronics can itself be entertaining.

That you have to ask this NG the length of a half-wave antenna tells us you're not interested in the entertaining aspects of self-improvement that this hobby offers. You come across as a GMRS operator with a ham license.

He should be praised. What we don't need is 700,000+ rptrs in this
country. Too many ego-centrics have installed rptrs that duplicate
coverage of existing rptrs (which in themselves duplicated coverage
of other existing rptrs, ad infinitum). Such folks seem to love
the title "repeater owner" (and "beacon owner").

Heehee - I can still remember John Mackey coming aboard and proclaiming
in every one of his posts "I own the Portland 147.435 repeater!" Almost
anyone can slap together a rptr using two transceivers in a matter of
a few hours.

I posted my reasons for omitting my callsign on several ocassions. If you
would like to meet on the air, it can be arranged. However, I doubt that
you'll show up. I've already had two no-shows. Makes me wonder who really
has the balls around here.

You're right. Landfills are overflowing.

We should dump them in the ocean. Not close to shore, but far enough out
so that it will be past the continental shelf. In fact, let's dump them
over the Titanic so that explorers will have something to scratch
their heads about in 1000 years.

Well hello, John! What you need to remember is that:
The charter was written by the newsgroup users; the charter was
voted upon by the newsgroup users, and the charter was (overwhelmingly)
approved by the newsgroup users. With an estimated 200,000+ readers,
that NG would become completely useless if folks like yourself chose
to ignore the charter recommendations. Feel free to start your own
alt NG, though.

>Mackey is a fool and so are you Jeffy.

Oh, now that's a bit strange - calling yourself a fool.

73 John, and enjoy the weekend!

The U.S. Coast Guard wouldn't allow their code operators to use a
bug on the air until they'd attained a receiving code speed of 25wpm
(random groups, not text). I believe it's best to follow the example
set by the professionals.

Oh, Come on, Drewgley. I guess the humor just shot right over your pointy
little head. Either that or you saw a wonderful opportunity to take something
out of context and make somebody look like some sort of monster. I did not
intend the "ultimate solution" to actually be applied, even to you, just for
being a pirate, so don't get your knickers in a knot.

once again, for the record:

=o)

okay?

Not me, Drew. I don't blame you for ANY of the ills of amateur radio, though I admit I don't credit you with many of it's higher achievements. Nor do you need to get your goat scaped for the ills of the ng... you take enough heat for your more bone.headed remarks, and that is sufficient.

Maybe you would be missed in a mascot sort of way.... but hat the whell... I can't let my personal fondness for you stand in the way of scientifc research. =o)

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #256 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 27-Feb:
-
1. Four School Contacts Set for Mir, Could Happen This Week
2. FCC Licensing Computer Goes, All Applications on Hold
3. W3AA at Franklin Institute to Be Inactive Exhibit May 1
4. Petition Granted by ARRL, NLI SM Recall Vote to Take Place
5. RAC President Blasts IC in Letter to Industry Minister
6. Canadian Hall of Fame to Induct Two Outstanding Amateurs
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. Dan James, NN0DJ, New AMSAT News Editor, Replaces WT0N
10. "This Week" Audio Now Available at Three Internet Sites
11. Mel Roman, KF2WN, SK, Former AMSAT NJ Area Coordinator
12. "Ancient Amateur Archives" with Bill Continelli, W2XOY
13. "The RAIN Dial-up" from Chicago
14. Special Event Station Calendar
-
Transmission and production expenses have been underwritten this
week by a grant from users of the N8DXB "Swat Team" repeater on
145.17 MHz in Kalamazoo, Michigan, serving Kalamazoo, Portage,
and Battle Creek, where "This Week in Amateur Radio" is heard
Thursdays at 8:00 PM.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
subcarrier. A fee has been paid to W0KIE for access to the
satellite uplink.
-
On the WorldWide Web, program audio can now be found in several
```

formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, W2XBS, at 518.283.3665 (packet @ WA2UMX.FN32AW.NY.USA.NA or email kxkvi@delphi.com) or Stephan Anderman, K2SMA, at 518.664.6809 (packet @ N2TY.FN32DW.NY.USA.NA or email sanderman@delphi.com).

2321. FS: Dualband HT & Dualband Mobile

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-21 00:00:00 UTC
From: Erv <kb8tnq@voyager.net>
Message-ID: <34EE653C.27B2F41C@voyager.net>
Source record: 177675

Hi All:

Posting this for someone without internet access.

We have an Alinco DR-599 Mobile Rig 2m/70cm, 50watts/35watts with three power settings on each band. Radio is in excellent condition. Comes with manual and original packaging. Price is $400 or best offer. Price covers shipping via UPS.

The Dualband HT is a Yaesu FT-50R, one year old, with out-of-band mod done for receive. Comes with a ton of accessories, including extra High Power battery, drop-in charger, ext. Yaesu mic and cig. lighter adapter, to name a few. Price for the whole deal is $400 and will be shipped with manual, original packaging and a protective carry case.

Please email with questions or to make arrangements. No other warranties, implied or written accompany either of these items and they are offered in "as-is" condition.

7-3,
Erv KB8TNQ

Doesn't do anyone any good who is only on this newsgroup. Do you also
reply to letters you get via postal mail by sending them to an address
other than of the sender's address? That ALSO would not get to the
appropriate person.

I wonder what the people on that other newsgroup will think when they
see a reply to something that was never even posted there.

weird.

That was how many years ago? And exactly how did hams communicate, they drove
to houses to deliver messages? Most hams would not get off their asses.

In
> the Loma Preita quake of 1989 (sanfransisco calif), there was a period
> of 7 hours after the initial reports in which the only means of RELIABLE
> communications was amateur radio.

Going back 9 years to find a use for this HOBBY?

> Also, ham radio has pioneered some of the digitl technologies now in use
> today (include dsp processors for your lovely modem that operates over

Yes other things get discussed, "Oh what a beautiful day, "who shall get the
doughnuts", "you are 59 please repeat all"

>Your arguement that we don't do this is baseless
> and unfounded. in fact, you did not even provide any examples as to how
> this could be.

15 do what you say, the other 99% sit on their butts. Am I wrong?

> HAve you considered, that without some kind of antenna installation,
> that we hams may not be able to communicate during times of "emergency"?

And exactly how often does the average ham use his antenna for anything
but self interest?

> Your arguement that the ARRL has pressured the governemtn to "pass laws
> that prohibit towns from controlling these large antennas" is not
> entirely the truth.

Not entirely.

The ARRl has been active in making sure that we have
> our privileges under the law (by issuance of the ham liscense) protected
> against unwarranted restrictions by such local communities that seek to
> control every aspect of our lives.

So now it is OK for the ARRL to control the lives of local residents?

In fact, if it weren't for the ARRL,
> we wouldn't even be allowed to use the spectrum we have now,

True, the ARRL is in bed with the FCC.

> Most of your arguements contained herein are baseless, or just plain
> hate mongering....

Name calling will get you exactly where?

And here is what you said about yourself:

Hi, I�m Melissa. I'm 49. I live in Denver Colorado. I�ve been legally married for 12 years now, to Jennifer (37) . I used to be male & we were married then in July 1984 & it�s still legal. I was a Male-to-Female TS (Transexual) until I had surgery in March of 1996. I�ve identified as a lesbian for the past 15 years or more. Now I are one. :-) We�re looking for some friends here in Denver. Jennifer was severely injured in her right knee a few years ago, is disabled now (with RSD; Reflex Sympathetic Dystrophy), & we�ve both been pretty lonely. They have her on some pretty heavy drugs now & she can�t do much so I�d also like some friends to do things with when she�s not up to being able to do anything. I was an Electronics R&D (Research & Development) Technician & have had problems working since I was harassed for 5 months then fired from Orbital Sciences Corp. Space Technology Laboratory in Boulder after working there 4 1/2 years, when they found out I was a TS in 1993.

---YoDoc@aol.com wrote:

> Gee, this is certainly going to have a lot of influence at 225 Main St.

I will not send the letter if I get a response detailing EXACTLY why my status as a VE was changed. What rule exactly did I violate and what specific action violated that rule? I would to know if ANYONE thinks it is unfair to be summarily dismissed. I will not have taken action without plenty of prior notice, unlike the action of the ARRL.

> I can just see President Stafford and the Board of Directors quaking> in their boots now, hands shaking, saying things like "Get Fisher re-instated as a VE NOW or heads will roll!" Right.

You assessment of their reaction is correct. They would NEVER ever admit error. Do you not recall how the previous ARRL president said ham radio was more dear to him than his wife?

> If your letter ends up in my city's newspapers, I will simply counteract it with a letter explaining the situation, and your personal problems with the ARRL. I'll also recount all the public service my local ham collegues have provided for our community in recent years, and get some indorsements from the head of our county EOC, the Red Cross, our> Section Manager, our Division Director, etc. Burt, you have about as
> much credibility as Hitler saying he'll never invade Russia.

You certainly are free to write but there is nothing in my letter that is not true. Leave it to a ham to compare me to Hitler. Hams are like the Germans of the 30s and 40s, hams would look the other way if Jews were being killed as long as it did not affect them.

>
> Get a life, Burt. You obviously need one.

Look at my home page and see if I have a life.

I own several pieces of Kenwood equipment, and have had them all in for general alignment, service, etc. at one time or another. On one occasion, my TS-850s/AT blew it's DC voltage regulator well after the warranty had expired.

I have dealt with Mr. Eli Guzman at Kenwood West, and found him to be very understanding and helpful. So far, I have yet to pay for any of the "out of warranty" work I have had done. As far as I'm concerned, Kenwood West, and Eli Guzman provided me with exceptional service, both during and after the warranty period.

Hi all,
I have a Saber 1, Model H44QXN7139AN. It is 12 channel, high power, with securenet module installed. However, this unit is currently on 418Mhz, and I need one for the 440 ham band. I also have a NTN 4593A high-cap battery with it. I am looking to trade for another Saber 1 in the ham band, or another COMMERCIAL ht that will work in the 440 band. Securenet is not required. Thanks in advance, please reply via e-mail. This unit is an 8 on a scale of 10. It has just a few scratches on the case.

> I believe there are things called packet radio internet gateways....
> .... presume its possible to run TCP/IP over that, with WIN95, and all...
> obviously be the first time you have heard of it, so DONT bother to
}....running netscape,TCP/IP via a TNC and HAM Radio Internet Gateway...
Do HAM radio rules in England allow transmission of commercial advertisements over HAM Radio? I am just wondering what would happen if you pointed your Web Browser at a site that had several advertisments as many do, and this was done over the HAM Radio via a TNC?...

Forgive me Moss, I won't say I never heard of this, I won't say that I have either.:) I won't even direct this at you...
Just reading your post, the questions come to mind...
Would a HAM in the US get into trouble doing this, if several advetisments, get rich quick schemes, playboy.com or what ever came to him over the TNC?
I recall a HAM about 8 years ago losing his license for posting a 1-900 number on a packet BBS...this was in the US... I know we can now order Pizza over the air (never done that either), but isn't their a risk of allowing inappropriate material over the amateur radio air waves when surfing the Internet via a TNC?
Who is giving this service over the air?

>Carl (W1ZGZ)
>cgbraun@ibm.net
>
>

Yes AM does still exist on 6 meters -- but not at the level it did when we were using it in the late '50's and early '60's. (You may remember me as WA2HVK from Brooklyn NY)

These days, those of us with AM geer also operate the more populat modes including CW, SSB, FM, etc. AMer's on 6 must have a lot of patience and wait for others to show up. They also must have th dedication o never leave home without calling CQ on 50.4 at least once a day.

Today, most 6 meter AM activity is confined to 50.4 MHz (or should I say Mc?)-- and is only found in and around major population centers like New York, Los Angeles, Chicago, Indianapolis, Miami, etc.

Last year, my friend Dave Booth KC6WFS and I, with assistance/support of CQ-VHF Magazine and Worldradio Magzine -- began "The Great 6 Meter AM Experiment." The idea was to show how a $20 used AM transceiver can work the same DX as the most modern high $$$$ "multi-mode" -- if there are people willing to take the time to call CQ and to listen. The result was several hundred hamd either purchasing old 6 meter AM transceivers -- or resucting those that they had stored in the basement -- putting up simple dipole antennas -- working one another -- and learning about the "Magic Band" with a pittance invested. (DX is NOT mode dependant, If you can hear it -- yu can work it>)

Dave Booth has a webpage devoted to 6 meter AM with all the data, logs, station locations, etc. E-Mail Dave at kc6wfs@juno.com to get the URL.

Wwe will be continuing the "Great 6 Meter AM Experiment" this spring, summer and fall. Getting on 6 meters is cheap and easy.

Try it -- You will like it!

Here at WA6ITF I have and use an origional Clegg '99er that I got from Ed Clegg W3LOY many decades ago; plus a Knight TR-106, a Wippany Labs

'Lil LuLu built by Ed Ladd; a Lafayette HE-45B -- plus a Knight T-60, Ameco CB6 converter and Hallicrafters S-53A receiver as a tunable IF. My 6 meter antenna is only a coax horizontal dipole in the attic. When 6 is open -- any of this geer -- or my more modern Yaesu FT-690 -- all make great DX contacts.

de

Bill Pasternak, WA6ITF

2350. WHY K1OIK IS NOT A VE

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-22 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.f59e0dfeb71e87f98996e@news.planet.net>
Source record: 177449
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

When this thread had it's first go around last year (Burt does love to recycle his compost), by his own admission, he never once administered a VE session during the last 12 month period thus the VEC has, at its discretion, the powers to non-renew a VE's credentials. According to the booklet, Burt failed in his performance as a VE and therefore his credentials were revoked. What this all boils down to is sour grapes

Burt's use of threats is consistent to his personality. He is also currently harassing the people of Packard Bell for failing o provide him with free customer service on a computer that (1) is 2 years old and (2) he admitted damaging in trying to install a piece of hardware.

What amazes me is that he threatens to cause great fiscal harm to the company unless they comply with his demands on the basis of his side job of selling computers. IMNSHO, if this person really were a skilled salesman of computers and a genuine teacher of electronics, you'd think he'd be able to diagnose the problem and fix it. Alas, this is probably not the case as this is not the first post that Burt has made when something electronic has failed and he has no clue as to the problem.

His use of threats unless he gets his way smacks of the little kid who throws temper tantrums and stomps his feet. His constant referral to the nazis' and of Germany are truly amazing as he himself has used their tactics to foist his opinions on others.

His constant haranguing of amateurs as gutless is unfounded. Burt is like one of those annoying little dogs that yip at everything that comes close yet will never leave its own yard. When challenged, Burt has always come up with reason after reason as why we refuses to meet face to face on neutral terms. One of his best was when, invited to meet at a Boston area computer show (which he loves to attend) he DEMANDED 25 cents per mile plus expenses.

When asked to actually come on the air, he picks frequencies that are unusable, usually 40 meters at night. To his credit he then asks YOU to pick the frequency. So far, every frequency has too many problems...no propagation on 10 meters, no 20 meters because we're too close, 80 meters is too noisy, he has no antennas for the WARC bands...and on and on.

Like everything this too shall pass, but until then I suspect an endless stream of recycled compost...funny the first 1/2 dozen times, tedious the next.

Oh well. I too will counter with editorials should Burt's appear. I will submit posts from the newsgroups such as ASD to show discredit

whatever he submits. Such is his right, such is mine.

>rote is easy. Understanding the material, that takes real work.

True and most hams could not replace a fuse. Some are like you claim, they
know some theory.

>> Yes other things get discussed, "Oh what a beautiful day, "who shall get
the
>> doughnuts", "you are 59 please repeat all"
>read above... What kind of fools do you take the folks in this
>newsgroup for? I am sure a lot of them have heard many conversations
>that include a LOT more than just what you say.

Hams are not fools. They boring. I too have heard interesting conversations,
but it is rare,
YOU DO KNOW THAT. Much of what hams do and say is PAP.

>> And exactly how often does the average ham use his antenna for anything
>> but self interest?
>Arojnd here, more often than you *think*. Contrary to what you *think*,
>a lot of hams here are VERY involved with helping the community. What
>can possibly make you think otherwise? Sure, there are some "hobbiests"
>here too, but they aren't as common as you would think. Depending on
>what you are using it for, ham radio can be both a service and a hobby.

It can be but rarely is. Your area sounds more alive than most.

. So far, I haven't read
>many postings that tend to agree with you (in fact, there seems to be a
>large number that DISAGREE with you). Why is that????? (rhetorical
>question)

I have received messages of support. Most hams are afraid of the rest of you
to show support. I get many "go get 'em Burt" messages.

>

And how would hams have been able to seel their gear if it were
>made illegal? Answer: they couldn't.

So that is the basis for keeping the hobby legal?
In any event drug dealers seem to prosper.

>You stated in your original posting that you were removed from the VE
>corps. You also stated that you never received a reply to your
>inquiries> I begin to wonder if you actually did receive a response and
>that you posted this "letter" out of spite because you didn't get your

2354. Why K1OIK IS NO LOBGER A VE-PART 2

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-22 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.f59f52e5c8d74fd98996f@news.planet.net>
Source record: 177453
Cross-posted to:
rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

I took the time to read Fisher's vitriolic little webpage and have confirmed what I always thought, the man is definitely not playing with a full deck.

Yes, his credentials were not renewed. He was not fired as he states. He, from the outset, trys to throw his "weight" around by threatening to go and "cry" to the FCC. you must restore FORTHWITH he states....and then..states he is being discriminated against.

The ARRL response cites factors as to non renewal and the very 1st reason is exactly why this started. By Fisher's own admission, he has not administered a VE session in the specified timeframe. According to Part 97.525

No VEC may accredit a person as a VE if the person does not meet minimum VE statutory qualifications or minimum qualifications as prescribed by this part

Burt's response is then to argue that he was "fired" for no apparent reason, yet he conveniently forgets that in another paragraph her mentions that there were others that supposedly have failed to meet the minimum qualification. In fact, this is the paragraph where he does admit his failure by lying..I quote

Further, I know several VE's that have never been active in giving a test (as I have) that have not lost their status as a VE examiner"

If you'll remember the 1st go around, Fisher admitted to not having given a test in over a year, so he is blatantly (1) lying about and (2) attempting his little boy tantrums but crying that "other guys were doing it tooooo!!!"

Fisher then continues his tirade with threats to write his Congressman concerning amateur spectrum. In fact he is really threatening to stoop to blackmail to get his VE status restored.. I quote " I suggest you do not motivate me to do as I might wish. I am willing to let sleeping dogs lie, just restore my VE status.

If you do so, this matter ends, quietly. If not, neither of us can be sure what is at the end of the road."

What is also very interesting is now Fisher claims to be a member of a minority. My question is exactly what minority is that?? Obvious he's not black, Latino, Asian, most definitely he's not a woman, although he has a tendency to cry and whine like some. In fact, he claims

discrimination on this basis. He further claims to have done quite well on Wall Street and therefore will bring his considerable financial might to bear with legal action.

Words speak very loudly here and the words from Fisher show a total lack of any sanity. Normally I don't promote websites but this you have to see. A man reduced to fabrications and outright lies to massage an obvious bruised ego.

I can see why the people of Packard Bell are paying him no mind as well.

Get the full story on Burt Fisher..check out Dejanews to see just what type of man is teaching children in Cape Cod schools

>AWWWWWW! Isn't that sweet! I bet you just have a whole catalog of wonderful
>quotes from America's favorite feel-good magazine, just ready to reference
>for any occassion!
>
>But I still wouldn't want to drop any soap bars around you.

There are many appropriate things I could quote. But I won't. Four E-mails came in last night, all saying that I should not waste my time because you will won't change. You will continue to behave like a wounded animal, lashing out at everything and everybody--even if it is a source of help and encouragement. Are they correct, Rigley?

It's really ironic, Mr. Case. In my neighborhood, when a machine breaks down (say, a lawn mower), all the guys gather around trying to help. "Have you tried this?" "Here, see if this tool will help."

But when a person is broken, the tendency of society is to throw them away. We have our priorities upside down, don't you think?

Your defensive little remarks (which I'm sure you feel are quite "clever") serve only to build a wall around yourself. It will get pretty lonely in there after while.

Let me close with one more thought. Then I'll back off and let you have the final word. This comes from a gentleman named Henry T. Blackaby:

"Picture in your mind a tall ladder leaning against a wall. Now think about your life as a process of climbing that ladder. Wouldn't it be a tragedy to get to the top of the ladder and find you placed it against the wrong wall? One life to live, and you missed it!"

As we say at the end of a ham QSO, "Back to you, and I'll let you tie the ribbons on it....."

Best wishes,
Yrac

Thank you for your comments.
I have met people like Burt, in my short 49 years of life and 33 years as an amateur. They really get me, you, going, but, when I find that they have little to back themselves up, I then reanalyze what I am doing and settle back..... It isn't worth arguing with them.
Thanks again.

>They took his VE status because they read his posts about how worthless ham
>radio is.

It is important to note that there is no "privilege" in Part 97 that one
be appointed a VE. The ARRL, as is any VEC, is more than within its
Part 97 parameters to approve and disallow VE status to anyone. There is
no requirement that the ARRL allow someone to be a VE, nor is there any
requirement that the ARRL tell a ham why they are not renewing his/her
VE credentials.

The FC-20 is a matching autotuner for the FT-847. I think the price was about $300 to $400 USA Dollars. Also, there is an optional MOBILE SCREWDRIVER ANTENNA that is supposed to work from 1.8 MHZ to 450 MHZ. There is no control cable either! The control signals are sent along the Sheild part of the Coax cable. This antenna will work ONLY WITH THE FT-847! Price Is $250 USA.
You can see this stuff at the "Waters and Stanton" Web page. This guy is a British Dealer and you have to click "FT-847 Latest News Etc". Scroll to the bottom of the page after the FT-847 Specs.

>Extra.....

Toward the end of the period when the FCC was giving exams, and
still had a sending test, they'd let you use a keyer (but not a memory keyer).
The only thing they *supplied* was a grossly misadjusted hand key, but you
were permitted to bring your own key, bug, or keyer. The keyer had to have its
own power, though, and provide a dry closure to a 1/4 inch plug to drive their
Instructograph. They wouldn't let you plug in anything AC powered. (I think
that's because the exam rooms weren't set up for that.) Calculators were
allowed under the same sort of criteria for the written portion of the exam,
IE self-powered non-programable.

And you could copy on a typewriter (manual) too, if you brought your own.
They asked you to notify them ahead of time if you were planning to bring
a typewriter so that they could arrange for you to be tested without
disturbing other applicants with the clack clack clack. I loaned my Royal
portable to a friend for his Extra exam. He took it with three others who
were using typewriters, before the regular exam for those using pencil
and paper.

I found out later that you could also bring headphones for the exam
if you made prior arrangements. Wish I'd known that at the time. Their
Instructograph was horribly distorted, way too loud, and the room had
terrible echo.

Of course the VEs generally don't require a sending test, so use of
bugs and keyers is all pretty much moot today. But for any that do,
the rules do not require you to use a straight key, and the FCC set
the precedent by allowing use of bugs and keyers. (I wish I'd brought
my own key to the FCC exam, theirs was the pits, and I had a horrible
time with it. Fortunately the examiner was patient and let me fool with
it for a few minutes before starting the test.)

As with any testing session, it is a good idea to *ask* first before
you go. Find out what you can bring and what you can do. Also find
out if they test you on Morse Code or Farnsworth Code. The latter

can be quite a shock if you've practiced for the former. Another friend of mine going for the old Tech found that out the hard way. He had to retake the exam with a VE group that used Morse Code instead of Farnsworth Code in order to pass. He said that the Farnsworth characters just sounded like noise bursts to him. (He'd never listened to code characters sent that fast.)

>
> Does anyone have any infomation on how to use the MH-29
> speaker mike for the FT-51r. I got the mike but didnt get
> any instruction book with it. Help!

There really isn't much to it. Open the back of the mike (it has a
flip up panel) and you will see three switches

Lock
Backlight
Speaker

If you did not know this and it came locked, light off, and speaker
off..... I guess it would be kinda tough to use!!!!

I have both the FT-51R and the MH-29 Write if you need more info.
Use my callsign at poboxes period com.

cwcjr works. too.

Gee, Jeff, that's what a threaded newsreader is for. You can read
or kill threads with the stroke of a key. In effect, you can create your
own custom set of newsgroups right on your very own machine.
What could be better than that?

The TapeTenna was a fairly clever idea. Basically it was a couple
of surveyor's metal tape measures mounted back to back on an
insulating plate. You pulled out the lengths needed for the band you
wanted to operate, locked them in place, and viola, instant dipole.

Unfortunately, the TapeTenna company is defunct. But the idea
is simple enough that you can go over to Home Depot and buy
a couple of tape measures and a piece of plexiglass and make
one in a few minutes. The antenna is best hung as an inverted
V since the locks on the tape measures aren't all that strong.

Yes for 14.100,00 but some 2K it is SSB. I don't know in your area
but here from 14.090 to 14.106 the NCDXF beacons are totally blasted by
continual day and night digital garbage. In the 7050 to 7099 section
which is SSB for a lot of countries (Europe, JAs VKs VEs etc) it is
now very difficult to have a decent QSO.

Source record: 177476

Check out my clubs web site. We have built several repeaters linked together and you can get lots of radio mod info there. If you are serious, you really have to use a commercial radio like a Motorola or GE. Commercial repeaters from Yaesu and Icom are good but much more expensive and not any better technically. Spend the extra money on a good duplexer, feedline and antenna and control system.

Good luck es '73 de George KJ6VU

What happened at your last job?

I was promoted and received a 17% increase in salary, commesurate with
increased responsibility. And you?

You
>already know what I do for a living (I have spelled it out many
times). If
>you can't even read tht well, you aren't worth the time or
effort to even
>have a conversation with.

Yes, let's review. You're a gofer; an errand boy for the Maricopa County
Sheriff's Department. To clarify, I meant a PAID job, Eric. When are you
going to get a REAL job? You know, the kind that pays a livable salary?

You are, by best definition, a nitwit. Deserving
>of little respect and
earning even less. You seem to have an incredible
>amount of time on your
hands to harass others on the newsgroups. Why don't
>you get a job? At
least then, you'd have something to crow about.

I have a job, Eric (see above.) It is you that we are concerned about.
Getting a bit old to be hanging around Mommy's house, aren't you?

>back in
>the killfile you go.

Ummm...question here...if I was in your "killfile", how is it that you managed
to receive and respond to this post in the first place?

You lose again, Eric.

All those newspapers will see you for what you are, a spiteful
spoiled pariah dog. (for those not familiar, a pariah dog is one
that doesn't want to eat it's food but doesn't want anyone else to
eat it either). Get some therapy and get the hell over it. From
what you've written, I don't think you deserve to be a VE again,
ever!

You think you're going to take the heat off yourself for wanting to destroy ham radio, by starting ad hominem attacks on me? Sorry Charlie, better hatemongers than you have tried and failed.

If you want to be a big baby about getting dumped as a VE, then go out in the street and burn your ticket, and maybe a flag at the same time, but leave the rest of us alone. Don't be a pariah dog that has to destroy it's food that it doesn't want to eat, so no one else can eat it either.

Oh, and I took a look at your web pages too good buddy. So you have racial theories about all Germans. You were in 'Nam. (have you been checked out for post traumatic stress disorder? You sound like a loose cannon!) And you have a cute daughter.

You think I'm the only lesbian ham? I think not. And it's really none of your goddamn business, so quit being a big baby. I hope you start getting a load of shit on the air now, if you ever get on the air again, for wanting to destroy the hobby and for being such a bigot. And personally Burt, I don't think it's very becoming for Jewish people to be bigots against other minorities, whether it be gays or Germans. You, of all people should be especially sensitive to the fact that bigotry in all it's forms kills people and destroys lives! Like my Jewish grandmother always taught me, two wrongs don't make a right!

And unlike Burt, I value the hobby of amateur radio and want to see it preserved. I got my first ticket around 1967 just out of high school and think it's one of the best hobbies in the world, not to mention the pulic service. In fact I'd favor a law being passed by Congress that would preserve our bands forever, to be used by us and no one else, and not sold off to the highest corporate bidder for a temporary drop in the ocean of quick cash for Uncle Sam.

This is NOT a defense of Burt, but lets keep the record straight. SS was
invented (and patented) by Heddy Lamar ("the most beautiful woman in
the world") at the start of WWII. It was intended to be used for secure
radio control of aerial smart bombs, but didn't see use in that role until
much later when VLSI came along to make such small SS radios practical.
It was used on the Roosevelt-Churchill "hotline" (an AT&T HF transatlantic
link). Heddy was not, and is not, a ham, though she certainly qualifies as an
amateur in the broader sense of the term.

Hams have worked on, and with, many of today's advanced technologies,
but in a majority of cases they've done so in the capacity of working for
their employer, and not as hams. That's not to say that hams working as
hams haven't made contributions. Some certainly have, including the
late Sam Harris, whose 1960s invention of the parametric amplifier was
the first new amplifier circuit topology since 1920 (though there is some
reason to believe Tesla may have foreshadowed Sam). Phil Karn is another
modern amateur who has made significant contributions as a ham (as well
as a professional). There are others, most emphatically including those in
AMSAT who pioneered the microsat which birthed the little LEO industry,
and those in TAPR who took ARPA's Aloha technology and made it practical
and cost effective.

But we stretch things when we insist on giving amateur radio credit for things
hams do in their jobs rather than as hams. Should we credit amateur radio
with open heart surgery just because one of the pioneer heart surgeons was
a ham? Or should we credit amateur radio with the current popularity of
country music just because a number of Grammy winning country artists
are hams? I think not.

There was a time when amateur radio was the introduction to technology
for teens who then went on to excel in technical industries. Amateur radio
can take proud credit for that. But Burt is right about one thing, most of
today's amateurs are old fat white men who aren't being led into a technical
career by amateur radio. Nor are old fat white men likely to come up with
technological innovations, most of that is done by people under 30 whose
brains haven't yet calcified into a fixed paradigm. And, unfortunately, a large
number of those old fat white men want to keep amateur radio as an old fat

white man's social and gaming club instead of reforming it so that it can once again fullfill its precursor role in these very changed times. That's the real threat to amateur radio, not commercial pressure on amateur spectrum or restrictive covenants against antennas or mysterious lurking hordes of CBers who are strangely believed to break every regulation on the books except the one requiring a Morse speed test.

Maybe someone can help find information about the following applications.
I am looking for two system applications:
- A simple transmitter and receiver set that can send a
signal within a house to activate a relay or a light. What do you have
to do this? As an example, I have looked at a typical garage door system
and it will work, but it would have more capabilities than what I need.
- I am also looking for a long range transmitter/receiver (up to
3 miles) to send a simple signal (data burst). What do you have for this?

Please contact me at your earliest convience.

Thank you too (didn't see your first name here).
I personally think that diversity is the strongest attribute of any
species and should be celebrated not put down. It takes all colors
to make up a rainbow and all kinds of people to make up a world,
even the Germans who Burt hates. (my family is mostly Jewish
too btw. There were lots of Germans in WWII who sheltered Jews too,
he missed that fact.)

There's no such thing as "normal". "Normal" is just an
area on a statistical curve, each individual point of which is
unique.

Try to get a grip and have a nice life Burt.

If you're in the mood for such things, obtain a copy of U.S. patent number 2,292,387 "Secret Communication System" by H.K. Markey (her real surname) et al, dated 11 August 1942. Be prepared for turgid legalese.

She and her colleague (George Antheil, a concert pianist) had torpedoes on their minds. The patent (I have a photocopy in front of me) refers to "the remote control of dirigible craft, such as torpedoes".

By 1942 the war was almost half over. Just because the U.S. didn't get involved until the end of 1941 didn't mean people weren't fighting - and dying.

SB DX @ WW $OPDX.345
Ohio/Penn DX Bulletin No. 345

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 345
BID: $OPDX.345
February 23, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K4VUD, N4BQW, N4JQQ, WA4FFW, WA4JQS, KB5GL, N5AW, N5VL & The Island/DX News, K8XP, W8EB, G3HSR, G4BUE & DX News Sheet, HB9FAP, JA0DWY, LA6WEA, OE2GEN, PA3ERC, VK3CWX, VK6APK, XE1KK and ZP5AZL for the following DX information.

3C, EQUATORIAL GUINEA. Alan, 3C5I, made his first contacts on six meters (possibly the first ever from 3C?) last weekend with Italy (apparently on double hop E's). He runs a beacon intermittantly on 50.107 MHz with 10 watts to a 4 element quad. Note, however, local TV makes reception difficult for him in the evenings (approximately 1500-2300z). Also, Alan is on the HF bands, but his main interest is six meters. He expects to be in Malabo for two years. QSL to Alan Isaachsen, c/o Mobil Equatorial Guinea, P. O. Box 13908, Dallas, TX 75313.

5R, MALAGASY REPUBLIC. The "DX News Sheet" reports Ray, is still quite active as 5R8FK, often on 30 meters CW around 0000z. QSL via NY3N.

9M6, EAST MALAYSIA. The 59(9) DXReport states Pekka, OH2YY, will be signing 9M6PO from Kenigou for the CQ WPX SSB Contest (March 27-28th). His top priority is the lower frequencies.

9N1, NEPAL. Just a reminder that Charlie, K4VUD, has returned to Nepal and will be active as 9N1UD. He will be active in the upcoming contests until his return to USA on March 9th. Please refer to OPDX.339. QSL via K4VUD.

C6, BAHAMAS. Steve, N4JQQ, will be active from Treasure Cay, Abaco, July 10th to August 2nd, as C6AFP. He was there this past week, but his main activity was to work on his house there. He states that he took a PK-232 for RTTY to be used in the future by him or by anyone wanting to rent his house (you must bring your own laptop). QSL C6AFP via N4JQQ, Steve Rutledge, 199 S. Grove Park Road, Memphis, TN 38117.

HK0, PROVIDENCIA (Update, please refer to OPDX.344). Silvano, KB5GL, reported to OPDX that he will now be operating as HK0/KB5GL instead of KB5BL/HK0 (as reported earlier). Also, Vance, N5VL, from the Island/DX News, told OPDX that he talked to Silvano by telephone and informed him that he has extended his IOTA operation from NA-049. His new dates are February 26 to March 6th.

JX, JAN MAYEN. Ken, LA6WEA, reports to OPDX that Per, JX7DFA, will be active every Saturday on 18090 kHz from 1400-1500z, looking for U.S. stations. He states QSL via: JX7DFA, N-8099 Jan Mayen, Norway or via home call LA7DFA.

KH9, WAKE ISLAND. The Dateline DX Association returns to Wake Island this week and will be active from February 26th through March 11th. Their emphasis will again be on Europe and the low bands. Operators will be Tom/K8XP (ZK1XXP, AL7EL/KH9, V7/AL7EL), Bob/N2OO (9M6OO, V85OO, V85OM, XX9OO), Michael/N6MZ (VK0IR, ZK1XXP, SV5/N6MZ), and Bill/N2WB (KG4WB). Four stations are planned to be active 24 hours with directional antennas for 10 through 20 and verticals for 40, 80 and 160. Special efforts on RTTY will be handled by N2WB. Operators will sign K8XP/KH9, N6MZ/KH9, N2OO/KH9 and N2WB/KH9. QSL via WA4YBV. For more details, please refer to OPDX.342. Also, checkout the Dateline DX Association Web Site whcih can be found at: www.goldtel.net/ddxa Updated information can be found there for the upcoming Wake Island operation, as well as other operations in the past. The site is still under construction and is not yet quite complete.

OE9, AUSTRIA. Gerald, OE2GEN, reports that some members of the Austrian OE2DX-GROUP (OE2S) will be active in the 1998 ARRL Internation Phone Contest (March 7-8th) as OE9S. QSL via OE2GEN, please via bureau.

PJ8, ST. MAARTEN. By the time you read this, Ron, ND5S, and Bill, W8EB, (along with their wives KF5LG and W8DVC) will be active from here until March 8th. They will be using the contest callsign PJ8A for both CW/SSB ARRL Contests and the CQWW 160 Meters Phone Contest. They plan to keep a sked each day on 14200 kHz + or - 2030z with the gang back home. If you need a contact, you can make it then. They will also be active on RTTY and the satellites.

QSL INFO AND NEWS.....
If you had a chance to work Fabio, HB9FAP, during the ARRL CW Contest as a Single/Op Single Band (7MHz) this past weekend using the special callsign HB5H, please QSL via home callsign.

ZK1XXP QSLS. For those of you who are waiting for your QSLs from the Dateline DX Association's operation from North Cook in September, those cards have still not been received from the printer in Germany. They were told they should arrive in the next 3 to 4 weeks. The DDXA appreciates your patience and certainly wants to confirm those QSOs for you. Again, please be patient. It is also not necessary to send second requests.

N4BQW QSLS. Mac, WA4FFW, reports that all QSLs received to date for all of the N4BQW operations have been answered. This includes all bureau cards and all cards that have been received. Mac reports with deep regrets, there unfortunately was a pirate that operated a lot on 21 MHz CW and also 7 MHz CW. Chuck did not work any 21 Mhz CW on his KH5 trip. He worked only a few 40 meters CW contacts, but it appears that the pirate was quite active and must have had a good signal. All cards received for what appears to have been a pirate were returned with a note of explanation in them.

Rob, PA3ERC, reports that all direct QSLs for the Caribbean Tour '97 are mailed. These are for: J6/PA3BBP, J6/PA3ERC, J6/PA3EWP 9Y4/PA3BBP, 9Y4/PA3ERC and 9Y4/PA3EWP. He states bureau cards will be sent out next week.

SSIDXG AND MKDXF PACIFIC ISLANDS DXPEDITION (Update). The Dxpedition has already begun with SSIDXG member Mark, KA4IST, operating from Palmyra as KA4IST/KH5 on February 5th. Mark will operate as much as possible on CW, SSB and RTTY, but will also be serving as member of the crew of the transportation ship. On February 20th, SSIDXG member Chuck, N4BQW, another operator, joined Mark on the island. During the upcoming week, look for more operators to arrive. Slated to arrive on February 25th, are Joe/N4DAZ, Harold/K4AU, and MKDXF members Pat/NH6UY, and Mac/WA4FFW. The around the clock operations from Palmyra will continue with several stations on the air until February 26th. At that point and time, the group will depart for either Baker-Howland or Kingman Reef. They have permission to operate from Kingman, but the group is at the mercy of the USFWS and negotiations are continuing for this leg. There is a possibility for Chuck and Mark to put Kingman Reef on the air before the others arrive on the 25th.
The Team's plan is to sail for Howland Island starting operations on or about March 5th and be on the air for six days. The trip will be in conjunction with the U. S. Fish and Wildlife Service (USFWS). Again, the team of operators will be at the mercy of the USFWS's work schedule, and they have stated that they have 6 days work there.
The six operators have announced that they would like to dedicate and conduct this dxpedition in the "Spirit and the Memory" of the late Eric Edberg, W6DU. Eric was Board member of the NCDXF. Eric loved DX and loved to see anyone work a new one no matter where in the world they lived. Eric became a "Silent Key (SK)" on January 19th only hours after voting from his hospital bed to help support this operation. It is in that spirit and in his memory that the team has dedicated this dxpedition. In the Spirit of Eric, W6DU, the team will do everything possible to work as many contacts as possible throughout every part of the world. They will work all bands CW, SSB, RTTY, and they will try six meters. The only factors that will influence their operation are propagation and weather Look for the following callsigns to be used:

Palmyra KA4IST/KH5 QSL via AC7DX
Baker-Howland (SSB) K4AU/WH1 QSL via K4AU
Baker-Howland (CW) WA4FFW/NH1 QSL via WA4FFW

SPECIAL EVENT. The callsign VI3GP has been allocated to the Eastern and Mountain District Radio Club for use from March 5-8th, inclusive, in conjuntion with the running of the Australian Formula 1 Grand Prix in Melbourne, Victoria, Australia. Please QSL to the Club callsign VK3ER, either via the Bureau or direct to: EMDRC, PO Box 87, Mitcham 3132, Victoria, Australia with sufficient return postage and SAE. Operating frequencies will be supplied at a later date.

SPECIAL EVENT. Look for ZC6MPT to be activated by Yoshi, JA1UT, and the International Amateur Radio Volunteers beginning March 13th. Activity will probably last for about a week from Palestine. QSL via JA1UT.

SPECIAL EVENT. Look for 8J0WPG to be active during the "1998 Winter Paralympic Games" in Nagano, Japan, from February 23rd to March 31st. Activity will be on all bands CW/SSB. Send all QSLs via JARL bureau. Sample QSL and more infomation is avaiable at the Web site: http://www.clio.or.jp/~obayashi/8j0wpg/

SPECIAL EVENT. The Northern Corridor Radio Group will be activating the special callsign VI6EWT to commemorate the 120th anniversary of the opening of the East-West Telegraph. This line carried all communications between Adelaide and Perth, a distance of some 2700Km. Operations will be from the tiny township of Eucla which is located at the border of Western Australia and South Australia. Eucla is the site of one of the Telegraph Repeater stations placed along the route of the East-West line. A team of 15 operators will commence operations at 0100z on Saturday, March 21st and end the 24 hours operation later on Sunday, March 22nd. This period of operation coincides with the Australian Field Day Contest. Activity will be on 80-10 meters. Following this initial Field Day operation, the callsign will be used on all bands and all modes by various operators in VK6-land. This period of operation will probably be for about 2 weeks. This may be extended if interest is high and propagation is good. The Northern Corridor Radio Group will also be using the VI6EWT call for the CQWW WPX SSB Contest, March 28-29th, from its VK6ANC club shack. The QSL cards for direct request may include a photo of the ruins of the Eucla Telegraph Station. Bureau cards may not be as elaborate; it all depends on numbers and costs. QSL VI6EWT via the bureau or direct to: Northern Corridor Radio Group Inc. VK6ANC, PO Box 244, North Beach, WA 6920, Australia

XE, MEXICO. Look for the XE1RCS contest team to be active in the CQ 160 Meter Contest (February 27th to March 1st). During the contest, and for the third year in a row, they hope to work again all 50 states as well as many Canadian Provinces. They will also be looking for Europe and other DX stations. The team operators are XE1ME, XE1VIC, XE1YJY, XE1JG, XE1YAW and XE1KK. They will be using six beverages, two half wave dipoles, and a 1/4 wave vertical at full legal power. QSL via bureau or via XE1KK: Ramon Santoyo V., P.O. Box 19-564, 03901 Mexico, D.F. MEXICO

ZF, CAYMAN ISLANDS. Ken, G4RWD, will be active from here March 13-20th as ZF1RD or possibly as ZF/G4RWD. Operations will take place from the CIARS club station. Also, look for Ken to be active in the RSGB Commonwealth Contest. QSL via homecall.

ZP0, PARAGUAY. Tom, ZP5AZL, reports to OPDX that he will be active in the ARRL DX Phone Contest as a Single/Operator 20 meter high power entry using the special callsign ZP0Z. He plans to make use of his new antenna system (4 elements over 4 elements monoband stacked yagis).

If you want to lease a T1, ISDN or such, yes. However, in California, I pay Pacific Bell $16 a month for my line. That includes unlimited free local calling. Any LD charges are done through any choice of carriers, such as MCI, ATT, Sprint, etc. We choose our own LD carrier, and now it is commonplace to choose your own local carrier. Rates are extremetly competitive.

However, for home-telephone service, US$16 a month is not a bad deal, especially considering I racked up 110 hours of internet connect time last month.

> There is no such thing as a free lunch.

True, but our phone service here is close to it. Rates for business/commercial on the other hand are priced very differently.

Nonsense. Building a repeater, interfacing it to a controller, tuning
and installing duplexer, getting coordination, finding a site and
doing the paperwork for tenancy, doing the tower work, etc, then
installing the whole thing, trouble-shooting and maintaining it, is
not any afternoon job. It's obvious that you have no idea what goes
into a repeater project.

>By the way, most repeaters require much more than a few hours of work

>I get the impression you've never built or maintained a repeater
>at all, and your comments come as a bit of an insult to the good
>people that maintain open repeaters at no cost to the users.

I think you're right. There's no reason at all why we shouldn't have
more repeaters, if only for the valuable experience one gets by doing
what it takes to build, maintain, and operate a good, useable
repeater.

It's already happening... the 47GHz part of the spectrum, later this
year, may see the first evidence of this. The amateur band up there is
in real danger if the commercial people "run out of space"...

It has everything to do with all aspects of amateur radio. One individual with a bruised ego has decided that amateur radio no longer serves what he considers his agenda/purpose/deranged ideals. There is always someone out there with an equally warped sense, or lack of, purpose in a position to make things happen. Burt cares only for himself. He's proved that time and time again. As with a puppy that messes off the paper, the time has come to rub Fisher's nose in it and not only call his bet, but to raise the stakes as well.

If you're not interested, by all means, use the killfile/delete feature of your newsreader.

Hello.

This is to notify that one of the pro-CWers is subscribing something
[e-mail list] by using my e-mail address without my consent.

This is not acceptable. It is no better than posting by using
someone else's e-mail address.

You better beware when "we" find out who is responsible for this (and
I almost know who he is... only I need to do is to check the domain).

In fact, there were some legal cases of using someone else's e-mail
address. I also do not hesitate to take you to court.

Please remember, it is a criminal activity.

Please do not poke fun about this.

Thank you for your consideration in this manner.

I have 3ea Eimac 4-65A's (one of them is labeled 8165 /4-65A) Two of them were obtained from a radio station locally when they upgraded equipment. One I opened the can it came in (new and unused then) about 10 years ago it has not been used but I have no idea of the condition now. I also have a old 4X150A/FAA it was pulled about 10 years ago during trouble shooting of a radio, it was not the problem but was not reused. I do not know how much life may be in it. I want to sell all for one price. All are sold as is no guaranties.

Yea so is transmitting illegally on police frequencies and jamming FM broadcast transmissionsOhhhhh how quickly we forget aye Masa?

> Please do not poke fun about this.
>
> Thank you for your consideration in this manner.

Gee it's funny how Masa's command of English improved ten fold when he starts talking about taking someone to court.

By the way Masa, it should make for an interesting court case if when you find the perp and he turns out to be 'someone from somewhere' other than Canada. I suspect after spending ten thousand dollars in legal fee's your almost certain to win. The judgment? A cease and desist order at best... *yawn*

> easy to be lonely.

ha ha ha, another classic from Masa, "no one is using 6m or 2m here in Montreal" if your curious as to why Masa doesn't hear anything go look at his antenna 'farm' for VHF, it consists of some mobile sized verticals stuck to a plastic box sitting in a window sill.

By the way Masa, I was in Sherbrook a week ago and drove out from Montreal, there was MORE THAN ENOUGH activity on 2m, you seem to be the only one not hearing anything.

I have heard an AM net here in the Detroit metro area and one in Toledo while passing through, many are running old Gonsets, Heath Two'ers and the like, a few homebrew's pop up now and then. The activity seems to be limited to scheduled nets.

Hello,

Are you driving between cities and searching for a Repeater in
the Western
States? The Travel Repeater Directory and Maps contained in this 29
paged book
will make it simple. Whether you're out for a drive or on vacation,
locate the
nearest city or highway to you on the map and the closest repeater will
be listed.

We encourage you to visit our site and take a look at this new
book, and any
feedback you can provide will be greatly appreciated.

I have a Garmin GPS45. I also purchased their DC cable with the 2 DATA wires (white = DATA IN and brown = DATA OUT) Does anyone have a simple schematic and comm program for a PC to download/upload the stored waypoints into a PC? I have a lot of waypoints stored now and would really like to be able to back it up.

Also, a search of all newsgroups my ISP provides shows no match for "gps". Is there a better newsgroup for this question?

A joke?

Strange... I'm not laughing.

Maybe it's because there are a few hams who would actually advocate such
violence against freebanders, pirate broadcasters, and the like.

Who said anything about powering up or dialing up? It's a direct coax
connection. I very seldom power down my computer. To connect to the net,
I click an icon, enter the password and viola! I'm in with no busy signals!
It might not be free, but I say you get what you pay for. (and I can
download a 40meg file in under two minutes)

Source record: 177572

Hi Newbie
For the life of me, I also can not see why amateurs of today are so caught up in these debates. When I got into this hoby all there was was fellowship and major help at helping me learn the theory and get code pratice.
I often wonder, if the arguements of today had been present back in the mid 60's, how I would have felt.
The only advice I can offer is to consider the debates as only one very small aspect of amateur radio. Even thought there are lots of people trying to convince you of the lack of need for cw, try to get you cw endorsement and get on hf cw. Cw operating is a lot different from voice and, I think, a lot better (my opinion). I have not been of vhf/uhf voice because of the operating technique in about 10 years.
I just reset up my hf station this weekend and as soon as I get can some kind of hf antenna up, random wire, I plan to reaquaint myself with cw, after a 20 year absence, and get back on cw.
I like the internet but I use if for searching for information, via the www sites and the newsgroups. I have little sympathy from the nocode side, enough said.
If you would like more positive information about this hobby, you have my email address.

Hi again
Sort of an addon, I am constantly wondering why we are putting so much emphasis in all these debates and so little concentration in the continued development of amateur radio to help ward off the attaches by the commercial concerns in the above 30 mhz bands.

2456. FS: Uniden President 2510 & Wilson 1000 antenna

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-22 00:00:00 UTC
From: decomutt@aol.com
Message-ID: <19980222044800.XAA10258@ladder03.news.aol.com>
Source record: 177576

I purchased the above mentioned radio about six months ago. It is currently mounted in my truck and is used as a CB. I turn it on about once a month at best. If anyone is interested in making on offer for this radio & antenna combo, please e-mail privately to: "Decomutt@AOL.com". For those who don't recognize the model number, it's 25W 10 meter radio with alot of bells and whistles. (at least that's what the salesman said) I don't anticipate a mass of response, but the highest bid by March 8th, will own it.

I, too, would love to see a decline in "code wars" posts... I am not against the code, either as a requirement or as a mode of comm's, but neither am I a huge proponent of it.
This decline (hopefully) would mean it is being moved to a more appropriate NG (.policy) and keep this NG for more enhancing, and enjoyable/educational posts and discussion.
There is room for any and all debate, but there is also a time and place, and to turn this entire NG into a battle ground is a waste.
I love this hobby!
Mike in MO.

Hey Mark-
I agree entirely. I am not attacking Art as a person, I can easily seperate the man from the matter at hand, and I am only giving my personal opinions about Mr. Green. I don't even have a problem with Green the man... just had a few things to get off my chest, and I hope I didn't get this NG into another dumb flame war. Apparently, it hasn't gotten to that point yet, and looks like the thread will be short-lived, as was intended!
Thanks for your kind and intelligent words. You too Art. We all have our own way of seeing things and that's what the group is all about. I didn't mean to get "pissy" about "Take a pill", I was writing that with a smile of humor on my face, not a smirk of self-satisfaction.... That's the problem with computers, you can't see a face or hear the intent in a voice. Words can hurt if you're not careful and I'm not in the business of hurting anyone!
All the best to everyone! 73!
Mike in MO.

Press and hold the (F/W) button for 2 seconds until you see the (FUNC) display lightup and vanish again and you may see the left channel number flashing, release the (F/W) button and push the (BAND) button, this toggles the right display from UHF to VHF regardless of what band the left display is showing.

Once you have either VHF+VHF or UHF+UHF, just press BAND to toggle VV to UU and vice versa.

Memory bank switching is: (F/W) button hold 2 seconds (D/MR) button. Display: either a "n" for lower memory or
"U" for upper memory
It is not really a n and a U, but the display is close to that.

Do you know how to put the radio into cross band repeat? :) This one is not even in the manual. While the radio is off, press the (RPT) button and turn the radio on. Now the 5100 is in cross band repeat mode. Same thing must be done to deactivate it. You can not do same band repeat.

The 5100 hundred is a good radio, but you should get a manual to learn all the great functions.

Theonly thin I recommend is keep the lamp display on a low setting to get the most life out of the display lamps. To dim lamp, press (F/W) and hold and turn the tuner dial to dim it to one of the lower settings.

I have had to replace one lamp, and it is a small pain in the rear. You can find a small minature 12v bulb with pig tails at radio shack that works great should the need to replace one of these ever arises. I know one other 5100 owner who had to replace his also, we both keep them dim now.

Getting to the bulbs is a hassle and something that I do not think the radio can handle having done many times, as the metal tabs that have to be straightend to release the LCD plate from the circuit board will eventually metal fatigue and break after repeated bending. And if you lose one of these tabs, your LCD will not make good contact with the board and you may end up with a screwed up display.

Anyone who has ever done this, will know what I am talking about. If you have to do it, be careful. I also suggest leaving the old pig tails of the burnt bulb soldered to the circuit board and soldering the new bulb pig tails to the old pig tails. It is pretty easy to do that way.

I know this is more than you wanted to know...:) but since you have the radio, it may be a good piece of information for you to know.

Also, on some of the dual band stuff you may run across a birdie here or there...no big deal, I think most dual band radios may have a birdie here or there.

Hmmm one comes to mind on my radio...this I found while listing UHF+UHF mode I was tunes to 444.200 on the left display and had the right display scanning, when it hit 444.200 on the right, it showed a full scale s reading.
No big deal, but you might find a quirk here or there. This does not happen on all frequencies, just certain combinations. It still is a great radio. I wouldn't mind picking up another, one day so I can have one at home and one in the mobile.

Well, good luck & 73 Mark

Hi Brian

The first part is correct, transponder receive power and commands on a
125khz carrier frequency, but the answer is made modulating power
comsumption. OK I explain better, when you change the resonant frequency
at the receiver coil, in the coupled transmitter coil the power transmitted
goes lower. If you measure the power transmitted, normally measuring
voltage in the coil, you can receive data from the transponder.

For a complete documentation ask to a Philips components vendor

You know when I was just a young child I had 2 mice (Gary & Lois). Well needless to say you cant have just 2 mice when one is male and the other is female! Soon I had 22 mice! There wasnt enough room and they started fighting! Plenty of food and water just not enough room. Are we maybe to packed togather?

No it's not. Not in this context. You jumped in w/o having read my
original comment carefully. Of course, you attempt to shift blame:

>They're quite common
>in speech, but your feeble mind is apparently unable to comprehend them
>when they appear in print. I suggest you go find an English teacher and
>have him/her explain them to you.

Right. My English teacher has given you an F.

I still claim that using just a dumb terminal at home, I can, from
power-up, to dialing in, get online faster than anyone can with a PC.
Your claim of a Mac doing that in 5 seconds is ridiculous. Just waiting
for it to boot up after powering it up will cause one to grow old.
(I believe we've exhausted this non-radio thread.)

Source record: 177349

Hi Chris,

I'm only an SWL, but from my experience the WARC bands often provide better conditions than the "Main" HAM bands. Many times 12m will be wide open when 15 is crowded and 10 is not open. Similarly in the bottom of the cycle 17 is often open when 20 is packed and 15 is not open. As for 30m, well that is one of the few bands which is VIRTUALLY open 24 hours a day 365 days a year.

My suggestion would be to go for ALL of them if you can. There's some great DX around on WARC bands. Since January I've heard the following on 12m : YS, 8P, W, YB, BV, VK, ZS, TU, 5N, CX, PT, LU, ZB2, etc. Not bad considering condx are still FAR from good.

Hope you find this of use.
73,
Karl - RS174461 (G SWL)

This sounds like a Carlism. His dog gets sick, or his car breaks down, and he blames it on the "pro-coders." Usually, it's the code folks who get blamed for attempting to divide the amateur community, but as the above shows, Masa himself has partitioned the hams into two disjoint groups.

I certainly don't condone someone@somewhere.com's actions, but Masa shouldn't tarnish an entire block of individuals due one mean-spirited person.

Help!
Anyone any ideas on how to minimise radio interference from my TI Extensa laptop?

Both the screen (guess not much can be done) and the mains adaptor (a small box) are causing quite a lot of interference when I use with my Icom IRC8500.

Can I enclose the laptop's adaptor in another kind of box??

Any ideas welcomed.

No! the insult is the ARRL insistence that anyone who applies for an exemption is a cheat and to justify that, they demand full access to a persons medical records without any guarantee they will not be made public by the ARRL or used in a manner detrimental to that person later down the line. Ever paid for a full set of copies regarding a severe medical condition? I have and it cost hundreds of dollars. If you are disabled you will know what I mean. David Sumner is merely the Hachette man for the Board of Directors and is doing exactly what he is told by the board to do.

Most of the used radios will have none or all of the WARC bands. If you did have to choose from only a few I would suggest that you include 17 meters. It is a fun band to work. Lots of DX and not all of the pile ups you tend to get on 20.

Oh, that's easy! 30m, of course. It's the only non-voice HF band,
it opens earlier than 40m, and stays open later than 20m.

I, too, didn't have WARC-capability, so I built a 30m CW QRP transmitter,
and have had lots of fun on that band with it.

> Where did I EVER say that?

On many occasions back in June 1997, when you first dragged this dead horse
out, you were repeatedly asked when was the last VE session you administered.
You never answered. In fact, your response was, that you didn't know there
was a time factor and before the time factor was revealed you volunteered that
several other VE's had not administered a testing and they had not lost their
VE status. Interesting that you would on one hand make such comments and yet
never once answer a direct question posed to you.
>
> >No VEC may accredit a person as a VE if the person does not meet minimum

I am a Dyslexic ham (well almost, I passed my TECH test but the darn FCC computer is down so they haven't proccessed my app yet). I am 29 and my dyslexia is not real bad. I just have to remember to slow down- and say what I want to say clearly. I find that saying things to my self first be fore saying things out loud helps me alot. But this approach has lead to lots of people thinking I am nuts for talking to my self all the time. I only missed one question when I took my TECH exam. Most of this is due to the fact that it was a quite test enviroment and I was allowed to use a calculator. I can do Calculus and Differintial equations all day long but ask me what 6*8 is and I go stupid. I am having alot of trouble with learning code. But I hope to pass my 5wpm in time. I just need to work on it every day and tough it out. I do not feel I should get any special treatment/privleges because I am "special" . Infact I feel that my dyslexia has helped me in my choosen field of work. I am a computer programer. through school I had very poor grades, due to a poor memory/attention span with the dyslexia. by gettting a computer I was able to organize my thoughts in a way that made sense to me- not the teacher. Now my Logic ablities are very sharp and I find that I can write some very awsome code, but it does take me a while to make it work, lots of spelling errors and transposed numbers. but the logic in my code is alway excellent. this comes from special class I had to attend in primary school. they tought me to slow down and break problems up into small parts, solve the small parts and you solve the big problem.

I recomend to your friend to go for it, but study the stuff your way not the way the books lay it out. I found the most help from this web site

<http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html>

It let me take the exam over and over until I could do from memory. and none of the questions on my real test where a suprise. I lucked out onmy test and onlyhad one question about bandplans. (I have a hard time remembering what freq rang I can due what in.)

Sorry if I rambled on here, but let me know if I can be of assistance in the future.

>How many repeaters have you built, Jeffrey?

What does your question have to do with people wanting to put up
unnecessary rptrs that will monopolize yet more pairs of valuable
frequencies? But if you must know, some 20 years ago, I built and
operated a remote base, not just to get into a distant rptr, but also
to have "mobile phone" capability (what became known as "autopatch").
I've also built and operated a 34/94 rptr (see below).

>>> Heehee - I can still remember John Mackey coming aboard and proclaiming
>>> in every one of his posts "I own the Portland 147.435 repeater!" Almost
>>> anyone can slap together a rptr using two transceivers in a matter of

>doing the paperwork for tenancy, doing the tower work, etc, then
>installing the whole thing, trouble-shooting and maintaining it, is
>not any afternoon job. It's obvious that you have no idea what goes
>into a repeater project.

You can make the system as simple or as complex as you desire, and of
course, the more complicated, the more headaches. My 34/94 rptr was
make from an HW-202 transceiver and a homebuilt COR. No duplexer -
just a wide vertical separation between the two antennas. I used
wire-line control. It never needed attention.

>>By the way, most repeaters require much more than a few hours of work
>>to build, and much more than a few hours to maintain and enhance.
>>I get the impression you've never built or maintained a repeater

>>at all, and your comments come as a bit of an insult to the good
>>people that maintain open repeaters at no cost to the users.

No, my comments are directed towards those who put up rptrs just for ego sake. Some time back someone asked how to build a rptr; I emailed him asking why he wanted to install one. His response: "I thought it would be cool to own one." Did he check to see if his efforts would duplicate existing machines? "No." Was there a communications void in his region in which he was trying to fill? "Uh, I don't know." Were there existing rptrs in his area? "Yes." Was there a time when they were all in use simultaneously? "Uh, I don't think so."

>I think you're right. There's no reason at all why we shouldn't have
>more repeaters, if only for the valuable experience one gets by doing
>what it takes to build, maintain, and operate a good, useable
>repeater.

Duplication of rptrs is important from a disaster standpoint, but ten-fold duplication just for ego sake should be prohibited. Each machine monopolizes two frequencies. When all the alloted pairs have been administered (either real or on paper), then the prospective ego-builders claim pairs outside the rptr sub-bands, creating hostile situations. As I said in the beginning, we don't need 700,000+ rptrs, one per licensed ham.

One further point - we have created a generation of hams who believe amateur radio and rptrs are synonymous; they know no communications life outside the local rptr, they can't communication without having to use someone else's radio (the rptr). IMO, I think we've made communicating "too easy" for them - no longer do they have to pay close attention to the efficiency of their "station," for their station is just an HT, no longer do we see the wide-spread sport of "hill topping" with high-gain antennas on simplex, attempting to squeeze every milliwatt out of one's setup.

Progress or not? I don't believe so.

Jeff KH2PZ

P.S. Please don't give examples of a few exceptions that happen to occur in your area. On a nationwide scale, I believe I'm correct.

Why won't you simply admit that the VE program is better off without you?
Exactly what is the ARS being deprived of by your abscence in the VE
program? How did it benefit from your presence in it, and what are the
health benefits that might convince an individual to allow a festering
boil to continue to fester? You have not been denied a ham license Burt.
Count your blessings.

2517. CHANNEL ISLANDS CHAPTER 10X INTERNATIONAL NET

> >
> >

There's an empty connector originally intended for a extended frequency
converter. It is not shown on the schematic. If you ground pin 14, the
readout will program from 0 to 999 MHz.

I hooked a 6.8K resistor from UHF1 to UHF2 on the band unit. This enables the
existing front end
to run in the 905-999 frequency range.
Mine worked up to 925 before the oscillator went out of lock. I expect you
could tweek the insides
of the front-end module to shift the range up to get to 950.

If you want lower frequencies, the radio is set up to tune 0-20, 20-40 and
40-60 MHz. with a 73 MHz
first IF. All you need is three VCOs, a couple of mixers and an oscillator to
mix the 73 down to 10.7.
If anyone has implemented this board, I'd be interesteed in the results.

DISCLAIMER: I HAVE NO INSIDE INFORMATION. ALL THIS WAS DETERMINED FROM
REVERSE-ENGINEERING ONE UNIT. MY DESCRIPTION MAY CONTAIN ERRORS. YOUR
MILEAGE MAY VARY. PROCEED AT YOUR OWN RISK. I AM NOT RESPONSIBLE
FOR YOUR BROKEN RADIO.

I'm simply sorry to see Gary, who normally posts informative messages
(even if I disagree with him), to stoop to ad hominium attacks.
Unfortunately, many otherwise intelligent anti-coders (Gary, Cecil,
Todd) have taken this tactic recently. Very sad, indeed.

Hello there,

I have for sale (or trade) the following cellular phone.

Motorola DPC-550 Cellular Flip Phone, it comes with the following accessories:

1. Two batteries, one is High Capacity, other is "Slim Line" type.
2. Car DC power/charge cord
3. Dual OverNight Charger (charges two batteries, and powers phone at the same time)
4. Original Packaging, full ESN/MSN (both are clean) info, original phone #, etc.
5. Phone is in excellent condition!!!! It is virtually new!!! (no joke)

I also have a "Test Mode" jumper installed (which can be easily removed) which enables the unit to also function as a reciever on all the allocated cellular freqs. Lots of docs are included with the phone about this. Price: $65 or trade.
If you are interested, please email me back. Thanks for reading this.

I was not so much taking his side as pointing out that your objection to the post in question was based on his capitalization and spelling. That is one of your fallback defenses anytime you don't have a good sound concrete objection to the content. Hey, my spelling sucks sometimes, and so does my typing, but if the only objection to MY post is that I spelled a word wrong or mis-punctuated or mis-capitalized, I reckon that post went unchallenged and was therefore accepted by all, including my flamer, as essentially correct. It makes you look ridiculous when you flame a conflicting view by picking fault with a little careless spelling. If you have a problem with the content of a post, let's hear it. Your views are valued too, as long as they are logically presented and sound. You are smart enough to participate in grown-up discussions if you choose to do so. Don't be so childish already.

If you intend to use it with OS/2 as a WIN-OS2 operation, while you are digging for things be sure you get a copy of the OSTSR time slice release utility. This one is free ware. At least install it with your setup, otherwise PPWIN will clobber your CPU load.

The best utility for bringing it under control in OS/2, to my experience, is the TAME320 utility, but that one will cost you a few bucks to register. It is more versatile than OSTSR and has let me do some things I needed that OSTSR wouldn't do...

If you'll check, you've posted to SEVERAL newsgroups. Have you considered e-mailing one-to-one? Or just posting to the newsgroup dealing with your subject of interest?

I know most Hams don't go on the air on five bands at once, but that's just about the equivalent of the present situation.

Being the gentlemen that Hams have always been, I know you'll want to rectify this situation.

Thanks for the consideration.

Well said Steve. After reading his web page, I had to go to the porcelain
appliance and relieve myself of lunch. Typical of someone devoid of ideas.
Instead of promoting ideas, the object is to attack, attack, attack.
Hmmmm, sounds like Washington!!!!

Could you possibly have a more cocky one? What difference does it make? Don't read the signature. Yeh, It's pretty long, and I have never read it entirely, to tell you the truth. I assume the content of hers and most everybody's posts to be in the message field. The sig usually is just a personality thing if it goes over 5 or 6 lines. Read it or not, as you please. That's one reason the sig follows the message, so you neither have to read it nor scroll through it. React to the content, Drew, not style or form, unless you just can't understand the text.

Surprised you didn't give her the old spelling lesson bit.

Melissa:

I realize that it may be pretty miserable for you not to be able to find someone else of your ilk in a city as large as Denver and it seems you must resort to trolling for someone in a news group. However, I would think that you are wasting your time spamming your pervisions in this news group. There are, I would think, other news groups set up that cater to that kind of activity. I don't want to sound like Glen, so I am not saying you can't post such in here, just that you are wasting your time. I would hazard to guess that most people in here agree with me on this issue but are too polite to say so. Well, your beginning to come across with an 'in your face' attitude and you must remember that there will always be someone 'back in yours'. I snooped around your web site, like I usually do when someone posts it in here, and from your resume it seems that you are a fairly intelligent fellow, in spite of your convoluted life style, so it surprises me that you have not figured out that your wasting your time in here.

In case your thinking about calling me a hate monger I don't hate you, I actually feel sorry for you. How about a homophobe, are you thinking of trying to put that label on me, well if you are be advised that there are far more nasty labels out there that could be put on you.

I like most of your posts, Curtis, but you are missing the point that Melissa
did not choose to broadcast her lifestyle here... Burt did. She gave him a
minor roasting, and he retaliated by dragging out her bio info, knowing that
there are many here who would find it damning and scandalous. I don't blame
her for being a little bit defensive. Also, you probably noticed at her site
that she has plenty of links to other sites where her lifestyle and personal
peculiarities are the norm. She wasn't on a fishing expedition here, I don't
think. You are right, this is not the place for that, and I doubt she would

get any nibbles here anyway even if she wanted them. As far as picking up a sweetheart goes, I believe she already has one she is quite content with. If she hadn't, and wanted to pick up a licensed YL, no doubt she would join LARC, the gay ham club that caused such a fuss when QST editorial staff balked at carrying their classified ad about 4 years ago, if you remember that. (not to be confused with at least one other club named LARC, I think Louisville Amateur Radio Club or something like that)

I don't see what she is hurting here... sure took everybody's minds off the code/no-code thing didn't it? HI!

I won't be on the ngs after tonight until I get back home in 3 months or a bit less, but I'll check my e-mail tomorrow. You all been a fun group.

I have told this story before. Someone wrote and asked me to re-run it
from time to time. this seems like a good time, so here goes:

A few years ago a young man was at VE at a test session taking the 13 WPM
test. He was legally blind, could have easily obtained a waiver, he did
not want, or need one. As the code tape was playing he had a legal pad and
a felt tip pen with which he wrote the code down, 3-4 characters a page
while all the while flipping pages in the pad. When the tape was over, I
read a question to him, he flipped through the pages until he found what
he was looking for and I would re-read the question along with the choice
of answers, it was multiple choice. He would write the # of the question
and his answer on a page of the legal pad. When he was through I had no
trouble reading his answers, or going through the code he copied and
reading it. He got 8 of 10. He moved after that but I heard he upgraded to
Advanced.

After that, we coordinated on 2 meters while he walked me through in
connecting with his computer, an IBM Compatible, through the phone lines.
My computer back then was a Tandy 2000. It was my first modem connection.A
very brillant young man, who did not let his lack of vision slow him down.

I took that into consideration. I had been to her web site and read her bio before
Burt posted it and I did not feel inclined to post anything about it then. I did
not post anything when she went back to Burt. When she started including in her

signature that bit about "does your religion and what ever she said and asking people to consider her religion and furnishing the link then she was advertising her lifestyle and seeking others with same.

That was how many years ago? And exactly how did hams communicate, they drove
to houses to deliver messages? Most hams would not get off their asses.

In
> the Loma Preita quake of 1989 (sanfransisco calif), there was a period
> of 7 hours after the initial reports in which the only means of RELIABLE
> communications was amateur radio.

Going back 9 years to find a use for this HOBBY?

> Also, ham radio has pioneered some of the digitl technologies now in use
> today (include dsp processors for your lovely modem that operates over
> the phone lines). Technology hasn't left us behind, we have simply

Notice the word "HAS", ham radio does nothing TODAY.

> As for my case, mine was read to me,
> as braille materials were not available the date of my test. I still
> ACED that test, and it contained some REAL math.

There is nothing wrong with a test being read to you, it is just the
questions are so simple, my daughter passed when she was 8.

What you cites does happen, 1% of the time. Listen to the typical DX contact.
Read the word TYPICAL.

.
> > Hams use many other frequencies for
> > little more than a discussion of personal medical ailments.
> so? A lot of other things get discussed to, yet yo make no mention of
> those at all.

Yes other things get discussed, "Oh what a beautiful day, "who shall get the
doughnuts", "you are 59 please repeat all"

>Your arguement that we don't do this is baseless
> and unfounded. in fact, you did not even provide any examples as to how
> this could be.

15 do what you say, the other 99% sit on their butts. Am I wrong?

> HAve you considered, that without some kind of antenna installation,
> that we hams may not be able to communicate during times of "emergency"?

And exactly how often does the average ham use his antenna for anything
but self interest?

> Your arguement that the ARRL has pressured the governemtn to "pass laws
> that prohibit towns from controlling these large antennas" is not
> entirely the truth.

Not entirely.

The ARRl has been active in making sure that we have
> our privileges under the law (by issuance of the ham liscense) protected
> against unwarranted restrictions by such local communities that seek to
> control every aspect of our lives.

So now it is OK for the ARRL to control the lives of local residents?

In fact, if it weren't for the ARRL,
> we wouldn't even be allowed to use the spectrum we have now,

True, the ARRL is in bed with the FCC.

> Most of your arguements contained herein are baseless, or just plain
> hate mongering....

Name calling will get you exactly where?

2565. RAIN Report for 2/20/98

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-23 00:00:00 UTC
From: arnoldr@ollie.ralabs.com
Message-ID: <34f0771e.314585016@news.axess.net>
Source record: 177434

The following is posted at the request of Hap KC9RP who curently does not have newsgroup access.

RAIN Announces Dialup Name Change

RAIN, the Radio Amateur Information Network, the Chicago-based audio ham radio program service, has changed the name of its RAIN Dialup Service to the RAIN Report. Its founder/producer Hap Holly/KC9RP has implemented this name change to coincide with his new web address rainreport.com. A modem speed of 28.8 Kbs or higher is required to listen to his weekly program, encoded with Real Audio 3.0 streamming audio. The RAIN Report still updates Fridays telephonically at area code 847-827-rain. According to Holly, the RAIN Report is intended for retransmission by vhf and uhf ham radio repeaters. "Vern Jackson/WA0RCR'S 160-Meter Gateway Radio Newsletter is the ONLY authorized HF outlet."

The RAIN Report for the week of February 20, 1998 includes:

"Maine Hams on Ice"

Dresden, Maine resident Max Jacques/K1MAX talks about the efforts of Kennebec county hams during the January ice storms in this interview conducted by Hap Holly/KC9RP. (13 minutes, 35 seconds)

RAIN Licensing Agreements Reiterated"

Clarification of copyright disclaimer, written and read by RAIN Founder/Producer Hap Holly/KC9RP (1 minute, 30 seconds).

For those reading about the RAIN Report for the first time, no one connected with it receives compensation from or for it. RAIN (Radio Amateur Information Network) receives no commercial funding. All revenue derived from non tax exempt donations and subscriptions to its 2 audiocassette publications help to defray production/maintenance costs and telephone charges. If you can help toward that end, the mailing address is RAIN, PO Box 2565, Des Plaines, IL 60017-2565.

You can now receive the new RAIN Bulletin each week via E-Mail. You'll know the contents and playing times of each RAIN Report before it airs anywhere. Go to the RAIN web page (rainreport.com). Needless to say the Rain bulletin can be read there as well. This is simply a a copy of what you're reading here not a written transcript of the actual programming.

The RAIN Report is copyrighted 1998, all rights reserved.
Unrestricted local VHF/UHF over the air dissemination of the RAIN Report is exempt from copyright licensing. Audio distribution of this service is licensed only to the following outlets:
Internet: Bohnhoff Mediacasting (rainreport.com);
H.F.: Vern Jackson/WA0RCR's 160-Meter Gateway Radio Newsletter

(Saturdays, 8 PM Central on 1860 Khz AM from Wentzville, MO);
Satelite: This Week in Amateur Radio (9 PM Eastern Saturdays on SBS 6, 13B Horizontal, 5.8 Mhz audio).

If you run both RAIN and either Newsline or the ARRL Audio News on your net, we suggest you run RAIN after all traffic and check-ins have been handled. Those stations needing to leave can without fear of missing the formal part of the net. You'll be surprised, however, just how many will check in and stick around to hear a program that probably no one else in the area is carrying. And remember, a regular check-in is a prime candidate for becoming a member.

Hap Holly/KC9RP, Founder/Producer of RAIN
Radio Amateur Information Network

Ad homINEM attacks - I guess you ran out of enough non-hams to beat up on?

Pull into an argument some fact which has no bearing on the matter
at hand so you assassinate anothers' character? Ham radio is far too
simple for this person...politics is where it's at for you...

Y'know, people wonder why the internet is sometimes characterized as a
"vast wasteland."

Take an honorable service like ham radio and put it in newsgroups
and VOILA - instant wastelend of hatred and attacks and anonymous
postings from people apparently completely devoid of anything!

It is possible to disagree without being nasty.

Recommendations to all:

Take your energies and go and get on the air. Learn something. DO
something. Go for a walk. Go chop some wood. Go fix your car. Go
work some DX. Learn how a radio works. Learn how coax works.
Go on a trip. Learn Tai-Chi. Go back to college. Spend some time
with the family.

Don't get sucked into the Internet vortex of hell.

You CAN do something useful with yourself...turn off the POWER switch
on your computer. Turn on your radio, or don't.

2567. Washington, DC area gifted with opening to UA0-land

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-23 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6cs06p$t30$1@w3eax.umd.edu>
Source record: 177436

Around 9 p.m. local time (0200z) last night, the DC area was blessed
with a brief but solid opening into UA0-land (Zone 18, I believe
Krasnoyarsk) on 20m CW.

At any rate, it was loud enough for me to copy a very warbly UA0AZ
coming from over the pole at S9+20 from my car. I answered him at
3 watts and got a 569 report. We signed, and he called a few more
times, and the path was gone...

How long until the openings get as far south as India? I've worked
VU ONCE in 11 years of operation...

Are you wondering at this point what ham radio is about?

...People, technology, equipment, and communications, and natural
phenomena like this one...

Good luck finding your own openings!

>Beware of Kenwood's Warranty on radios. See
>http://www.cyberramp.net/~johnf

John,

I looked at your web page. You never gave Kenwood a
chance to correct the problem. Send the radio back to them
and give them a chance to look at it - that's how they find
problems which they can correct. Kenwood, Yaesu, and Icom
exchange radios at times when they think something is
wrong with the radio - but not just because you threaten them
never to buy another radio from them - they usually like to see
the defective radio first.

How many HF rigs have you purchased in the last year ?
Think Kenwood is worried about going out of business because
you might not buy another radio from them in five or six years ?
Get real. And when you threaten someone, run the threats thru
a spelling checker before you send them.

No, I don't own any Kenwood radios, I don't work for Kenwood,
and I have no connections with anyone who does. I just think
you are being very childish with your piss on Kenwood graphics.

I just bought an HF rig from Yaesu. It doesn't have a few problems
that is did when the model first came out a year ago - basically
because previous owners sent defective radios back so that
problems could be identified and corrected.

I think about all you have done is make hams worldwide aware of
how poorly YOU handle customer relations.

73, Jim KH2D

Well, who was it?

After all, you *MUST* know who it was, since you OBVIOUSLY know he/she
is "Pro-CW".

It *COULDN'T* possibly be a no-coder who just thinks you are a twit, right?

>In fact, there were some legal cases of using someone else's e-mail

That would be pretty amusing -- someone in Canada taking someone who
isn't in Canada (presumably, since most RRAM/P users are US-based) to
court. Maybe you should contact our resident legal authority, Spew Durigan.

Perhaps you should plug in your antenna.

Funny, you were just telling us a month ago how 2 meters was a hot-bed of
emergency traffic due to the "ice storm".

So, which is it? Dead, or a hot-bed of activity.

During about 10 years have lost money with the Radio
the emissions were all cultural.
In SPAIN do not have COMPANY FREEDOM and by so many can not mount A commercial
network by administrative and bureaucratic problems.
This is due to the fact that to obtain a frequency one must go through a
contest I publish And here it is when appear The problems.
The speculators, those which do business without having interest in the radio
emissions, alone want the grant for power to sell it, even to coast of bidding
farewell to all The insole of a network that operate well, it is preferable
that all controlled este by the large chains and thus to remove the natural
right to the FREE EXPRESSION and COMPANY FREEDOM.
It is easier to control to a chain than hundred Independent radio, the radio
networks Are considered but a form of washing the brains that a form of social
expression.
In this country to nobody is pursued to himher you by their its political
ideas, is not given to himheryou frequency And is remained without issuing
in radio, without work and if protests put you a fine of 67.000 $dollars And
if do not pay to the jail, that if this is a democracy and all is going well,
very well.
So that then they arrive to you the rumors of the fact that before of the
contest publishes, the frequencies already it Has been given and to the
friends of always, if this finally is going to seem a republic ++Bananera.
We have lost the @@expensa of reissuing in a way commercial and power to live
of our Work, hard work and not always well-paid, but we are some professionals
of the radio And we do not know to make nothing but, alone radio and
television, but finishes esta is worse still.
We are professional of the communication cloral and our goal is the prompt
breach.
During the radio emission of makes some months a key beam on the repeater of
the destruction network our unit of power, to prescribe it of the liaison
and the antenna of the same, remained destroyed,
The cost of the nevosa equipment is superior to 8.000 dollars.
We do not have money for power to pay the new equipment and we leave with 38

courtyards in cute Forcing to the network so that this, draw all what could, with noises provoked by The regulation upon having the issuer to less of 5 meters of the audio equipment.
Please if you can help us sends us at least 10 dollars, if not the commissions
of the Banks is quedarian with all money and not us llegaria given, if you are many Could buy a new issuing of radio in fm (88 - 108 mhz) commercial band.
Not pens&#65533;is that we want to earn money, with this proposal, we would prefer an equipment such as the one which were having before, compound by
Codificador st&#65533;reo
Commercial issuer of 30 watts commercial band 88 - 108 @@mhz power Unit of 1000 watts
Liaison unit (network and receiving) commercial band 890 @@mhz 4 dipolos of vertical polarization - horizontal with 8 db of profit.
That we can offer you, few thing but if someone wants that theirits your his maqueta, theirits your his disk Theirits your his cultural association, to spread some ideas, theirits your his form of thinking make known some movement, cultural trend ect as long as this ideas will be LEGAL, we can help you we.
We have opened I number an of account in a bank, where be able to do The income, almost that it will be will be well received.
If @@disponeis of radio equipment, much better
They are accepted from 10 dollars (recommended at least 15 or 20), we need 8.000 @@dolares or a new equipment.

God gave you a free will, and the "democracy" you complain about not having is, in fact, exactly what you do have and is persecuting you. Why haven't you simply moved to another country? You could qualify for a station license with hard work and only the usual amount of beauraucatic politics, and wouldn't have to look for handouts to have a voice.

2581. FCC Enacts Internet Morse requirement

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-24 00:00:00 UTC
From: K0HB@USA.NET
Message-ID: <6cvdkccac1@nnrp1.dejanews.com>
Source record: 177200

Following provided by WA2MOE

February 30, 1998
FCC Enacts Internet Morse Code Requirement

D.A.P. INDEXES:
TOP STORIES | NEWS | SPORTS | BUSINESS | TECHNOLOGY | ENTERTAINMENT

Filed at 10:26 a.m. EST By The Disassociated Press WASHINGTON (DAP)

The FCC, under pressure to clean up the Internet, especially after the Communications Decency Act provisions regarding Internet content regulation were stricken as violating the U.S. Constitution, has decided instead to require a Morse code requirement for Internet users. Citing the success of the Amateur Radio Service and the general belief that its requirement for operators to pass a Morse code proficiency exam and other technical requirements, has kept the A.R.S. "clean", the FCC will enact a 5 word-per-minute requirement for all Internet users. They are leaving open the issue of whether there should be a "codeless" class of Internet user and are soliciting comments on this proposal. Codeless class users could read but not write to newsgroups.

Persons wishing to develop a web site having only links to other web sites having links to other web sites, and so forth, must pass a 13 word-per-minute test and demonstrate proficiency in HTML, the Internet authoring language.

Persons wishing to develop web sites that have actual content, as compared to just links to other web sites, must pass a 20 word-per-minute Morse proficiency test, demonstrate proficiency in HTML and the Java programming language, and show that they have mastery of at least one human language, such as English.

The FCC, which lacks budgetary authority to implement the testing program, has stated that it intends to create Volunteer Examiner programs for Internet applicants. Whiskye Five Why Eye will mail your application to the FCC for a fee of $500.00.

Heheh. Way to go! And you are getting on this newsgroups and reading and
posting just as well as a person using a Pentium II with MMX technology. In
fact, you are around $1000-$1500 ahead of the game. I know a guy who checks
into this system using a C64...and he can send and receive email and read and
post on these Newsgroups. As long as it does 2 things well, sends and recieves,
and you are happy with it, that is all that matters.

Just about everything's illegal in Canada.

I've been led to believe that, provided all the traffic
passed over any (theoretical) Internet/Amateur Radio
interface is originated by and destined for licenced
Radio Amateurs, then such an interface would not
be illegal.

Then should it happen that BT is so ill advised as to
drop local call charges, I hope the ISPs do introduce
connect-time charges.

Some people think it's perfectly fine for them to go telling everyone about
their wife and family, but if I tell everyone about my wife and family, it's
shoving it down people's throats. CB Charlie there makes me rethink my
anti-code position. I'd sure like to keep good buddies like him out of the
real bands.

Look Mr. Bigot, I was just posting about some standard amateur topics here
until hatemonger Burt outed me without my permission in this group, so if you
want to hassle someone, hassle him for bringing it up!

>There
>are, I
> would think, other news groups set up that cater to that kind of activity.

Go stuff it in your ear!

> I
> don't want to sound like Glen,

You sound like a cross between Jesse Helms and Adolph Hitler.

here,

Ha! As if anyone would care if you did!

> just that you are wasting your time. I would hazard to guess that most
people
> in here agree with me on this issue but are too polite to say so.

Or just maybe most people aren't hateful bigots like you. But sadly the world
still has a way to evolve.

> Well, your
> beginning to come across with an 'in your face' attitude

Sorry Jack, it was Burt who outed me without my permission here. Go whine to
him.

>and you must
remember
> that there will always be someone 'back in yours'. I snooped around your web

> site,

Yeah, I frequently get bigots doing that.

> like I usually do when someone posts it in here, and from your resume
it
> seems that you are a fairly intelligent fellow,

I'm a woman, stupid, or do you have to see a picture of my crotch so you can tell? That would be REALLY in your face, so I'll skip it.

> in spite of your convoluted
> life style, so it surprises me that you have not figured out that your
wasting
> your time in here.

I wasn't wasting my time. I started out posting to ask about a wideband scanner PC card, then saw hatemonger Burt's idiotic spoiled baby post about wanting to destroy ham radio because he can't get his way and be a VE anymore, and I expressed my First Amendment opinion to him about that. So hate boy goes and digs up some of my web pages and outs me without my permission, which is considered extremely rude. So if you need to whine, go whine to your pal in hate, Burt.

> In case your thinking about calling me a hate monger I don't hate you, I
> actually feel sorry for you.

And I for you.

> How about a homophobe, are you thinking of
trying
> to put that label on me,

Sure, might as well add that, since you've displayed that already too.

> well if you are be advised that there are far more
> nasty labels out there that could be put on you.

I'm so scared, I'll go hide in the closet... NOT!

Careful, Jeffy. It's not nice to accuse someone of engaging in illegal activities. Please state for the record exactly what unlawful acts Drew is engaged in and provide sufficient proof to back up your allegations. There is a legal term for making a false public accusation in a public forum such as this. It's called "libel." Judges and juries tend to award substantial damages to victims of "libel."

]snip[

That was an accident actually, I accidentally left the sig in there from
another group. If you look at my first posts, they didn't have that.

Now I'm posting from Deja because my ISP dumped the whole news server
yesterday and lost everything.

I think "we" need to work a little better on "our" personal pronouns.

My opinion of those "outlaws" is the same as the "legal" operators who talk
over SW broadcast stations on 40 meters every night. The only difference is
a piece of paper that says "Amateur Radio License."

Oh yes, that piece of paper prevents all interference with other services!

You can also use the up/down buttons on the mic after you press the F/W
button (and release, you don't need to hold the F/W).

Great radio!

Actually, there is argument for completely flat rates at the national
level for telecommunications - i.e. no toll charges for long distance at
all both in Europe and America.

I find it difficult to understand your hostility to flat rate local calls,
though. What is your basic objection?

It seems to work just fine in North America.

From: Kelly Johnson <kellyj@corel.com>
Message-ID: <34F3AC30.1ADD68CC@corel.com>
Source record: 177228

I'm looking for an adapter to use my aviation headset with my HT. I would prefer to buy one already made, but I could make one instead. I'm just having a problem finding an inline socket for the headset mike jack. (It's a little smaller than the 1/4" jack for the earphones. I think it must be 3/16")

Does anyone have any ideas?

2610. Ham web pages in central California? Where are you :)

ICOM makes one. HS-20SB, with dual level controls. It was designed to go
with their IC-A2, -A22 series radios which took the same accessories as the
IC-02AT and -32AT series amateur radios. The HT plug consists of the two
molded side-by-side plugs common with those radios.

2616. What is the capacity of AAA batteries?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-24 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34f3527d.764460@news.sprynet.com>
Source record: 177235

greetings

Sorry to ask such a basic question.

I have a bunch of AA cells, which I understand are rated at 450 mah.
I was given a number of AAA cells to check out, on my new analyzer,
but I don't seem to be able to find out their rating.

Some of the cells have the recommended charge current, in small print,
of 18 to 20 milliamps written on them. Since that number usually
represents .1c of the rating, I am assume the rating is around 180
mah. Some cells even have the rating, of 180 mah, printed on them.
When I set the analyzer for 180 mah, I get results of 150 to 250
percent. That seems rather high.

When I change the analyzer to 300 mah, I get around 60 to 70 percent.

Does anyone know, more specifically, the mah rating of AAA cells?

You never answered my question that I posted.

You said that I need not bother showing up with 100 watts and a vertical.

Apparently, your news server didn't get my post saying that this pretty
much described my station setup. Either that, or you ignored what I posted,
and you're trying to weasel your way out meeting me on the air, and make me
look like the bad guy (which seems to be a favorite pastime on this newsgroup)
Be that as it may, I then asked you if you still wanted to try to meet on the
air, since my setup doesn't meet your criteria.(Specifically, a roof mounted
Butternut vertical and a Ten-Tec Omni-D)

I will ask you again, just to show that I'm sincere: Do you still wish to try a
QSO despite this?

: devices will help. URLs or schematics.... anything..

Holy Cow, Daryl, how many groups did you post this to?? Sorry...but I trimmed the response to just r.r.a.homebrew...hope that works...it seems like the right one.

You could do it two different ways...either put a transmitter on the cat, or a receiver...well, you could put a receiver-transmitter (transponder), I suppose, instead.

Transmitter on cat: you use a direction finding antenna to find the cat. You really don't need much power for this, as long as the cat isn't in the habit of burrowing underground or crawling into culverts. 1 milliwatt should be PLENTY. There's a cute Motorola IC that can do this sort of thing, crystal controlled...you could add a tiny 555 to pulse it on occasionally. Would involve some construction. 445MHz would be a reasonable frequency. And you might get interested enough in fox hunting to get involved (or start??) a local group!

Receiver on cat: (smiley face on...) You could try to whisper sweet nothings into the cat's ear through the receiver, but if he doesn't come to your calls now, he probably wouldn't then. But you could also hook it up to give him a good shock, so he'd let out a loud MMEOWLLL when you key your transmitter...making him easy to find. (Sorry...smiley face off)

Transponder on cat: Kinda like the transmitter on the cat, but there are ways you can get more info. You could get round-trip times for the RF and get an idea of range. (Tough to do very accurately!!) You could put a GPS on the cat and have it report back the location when queried. ...

OK, OK, only the transmitter seems to make much sense. Power budget: 10mW. Package it in a 9V rechargeable battery case, using 3 of the 6 cells for power (removing the others to make room for the transmitter). 100mAH...should run for quite a few hours per charge. Pulse it to extend the life further...say 5 seconds on, 10 off. Antenna can be the collar that holds the transmitter on the cat. You can arrange to recharge thru the same terminals as you use for the antenna...and those are just the battery term's.

Rigley, when you first arrived here, we didn't know you nor your opinions from squat; you weren't a bad guy in anyone's eyes. It wasn't until you voiced your support of outlaw operators that we (or at least, I) viewed you as a bad guy. You believe the outlaws aren't hurting anyone, but when I pointed out some are operating on the HF SSB aero channels, you said nothing to condemn their actions. So, just what is your opinion of outlaw operators who transmit on frequencies assigned to "important" services, such as aeronautical mobile. (And don't forget, every kc, from DC to practically daylight, has been assigned to some service or another.)

73 Rigley,
Jeff KH2PZ

Indiana seems to be the king of 6m repeaters. Indianapolis has
over 6 of them. The advantage of the 50 Mhz band is a very good
selection of used commerical and military equipment. Brings back
the good olde days of hardware hacking.

[Late; so sack me ...]

DIVISIONAL NEWS (15/02/98)

NEW MEMBERS

A warm wlcome is extended to the following new members approved at the Council Meeting on 13th February 1998. We hope you will have a long and happy association with the Institute.

Full members:

VK2NNN Allan Meredith of Broken Hill
VK2BMG Brian Goodchild of Bellbird
VK2FLA Rick Koonce of Berry
VK2BN/VKDLE Fred Smith of Panania
VK2GVA James Morris of Spit Junction

Associate members:

Yvonne Matheson of Rockdale
Ken Perry of Caringbah

Eric Fossey
Membership Secretary

Field Day weekend broadcasts

Listeners are advised that the Central Coast Field Day is being held next Sunday, 22nd February. As is the practice on this day, the VK2WI morning broadcast will not be held. Instead, it will be conducted on Saturday evening, the 21st at 7.30 pm using evening broadcast frequencies.

The Sunday evening broadcast on the 22nd will be at the normal time of 7.30 pm.

DURAL COMMITTEE MEETING

A successful and well attended meeting was held last Sunday. The next meeting is set down for Sunday 24th May. A working bee will be held at Dural on Sunday 8th March. The entry road into VK2WI has been reformed. Please drive slowly while the surface consolidates.

The commissioning of the 6 metre repeater for Dural has come one step closer. New coupling loops for the cavities have been made and plated.

The controller and ID board have been constructed and it is planned to conduct tests during March after other work is completed. The frequencies are -- the repeater will transmit on 53.850 and receive on 52.850 MegaHertz.

WYONG FIELD DAY INFORMATION
to be held on Sunday 22nd February 1998

Venue is the Wyong Racecourse in Howarh Street Wyong
Gates will open at 8:30 am. Off street parking is free.
Entrance fee is $10.00 ... Senior's card, pensioner concession, students are $5.00. Children under 12 are free.

See all major amateur radio equipment suppliers under one roof with many dealers displaying latest products and offering prices that are once a year bargains!

Features include:
Intersting technical lectures
Packet Radio - Computerised communications displays
Amateur Telelvision transmission displays
Truck loads of pre-loved equipment
Radio Fox Hunts. These will include two 2 metre pedestrian and children's fox hunts; for these children will require a Walkman or a small FM radio receiver

For the family, there will be:
A free sightseeing bus tour of the Central Coast for the family, and
Free entry tickets to the Australian Reptile Park

Bring your picnin lunch or buy hot food and cold drink from the stalls on the ground. There is no cncerns of Yogi Bear dropping by to purloin your victuals.

DON'T MISS THE BIGGEST FIELD DAY IN THE SOUTHERN HEMISPHERE
Presented since 1957 by the Central Coast Amateur Radio Club Inc.

For further information contact CCARC, PO Box 238, Gosford NSW 2250.
Phone 02 4340 2500

WICEN News

It is planned to reorganise the WICEN mailing lists, with a view to making WICEN (NSW) more accessible to the public and the various authorities. There will be more news as it becomes available, as WICEN strives to keep abreast of available technologies.

The only event this month of which we are aware is the annual Central Coast Amateur Radio Club Field Day (often and incorrectly called the Gosford/Wyong Field Day), to be held at Wyong Racecourse next Sunday.

As usual, WICEN will have the usual picturesque stand, and some extra bodies would not go astray.

The mid-year conference of the Volunteer Rescue Association will held in Wollongong over the weekend of 21st-22nd March. As usual, WICEN will be represented, and will even find a way of partaking in the upcoming State Wide Exercise.

WICEN (NSW) will be holding a State Wide Exercise, prior to the commencement of the John Moyle Field Day, on March 21, 1998. Further details will be sent in a mailout to all members, all of whom are encouraged to take part (in order to test your readiness) and to stay on for the Field Day.

A reminder for events later on in the year include the "Minolta Ironman Australian Triathlon", to be held at Forster-Tuncurry on Sunday April 5th, with Steve VK2KXQ in charge; the Bushwalkers Rogain, run by Malcolm VK2YVA, on the weekend of 27-28th June at a location to be advised just two weeks previous; and the Hawkesbury Classic Paddle, on the weekend of 31st October and 1st November.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@nsw.wicen.org.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

DATE SLIPS FOR NEXT SAREX MISSION

The launch date for the next Shuttle Amateur Radio EXperiment (SAREX) payload, aboard STS-93, has slipped until late this year. STS-93 originally was scheduled to go up in August, but its primary payload will not be ready by then. The five-day mission is the only SAREX mission scheduled during 1998. But another flight, STS-95 in October--the flight that will carry once and future astronaut and US Sen John Glenn into space--has been under consideration for several months as a possible SAREX flight, according to AMSAT Vice President for Manned

Space Programs Frank Bauer, KA3HDO. Nothing has been confirmed yet, however.

While the shuttle will be involved in construction of the International Space Station (ISS), it's unlikely that SAREX will be aboard shuttle construction missions or shuttle/Mir docking flights because of the heavy astronaut workload involved on these missions and the need to swap antennas during Mir docking flights. The silver lining here is that the shuttle activity on behalf of the ISS lays the groundwork for a permanent Amateur Radio presence aboard the International Space Station when it is completed and occupied in a few years. But one ISS construction mission that's expected to be less busy than the others is under consideration to carry SAREX.

As ISS construction begins late this year or early next year, a transportable ham radio station will go into space that will support voice and 1200-baud packet on 2 meters and 70 cm.

Further news regarding future SAREX missions will be posted on the internet in The ARRL Letter and on the ARRLWeb as it becomes available.

RSGB Contest postponed

For those who enter contests, here is some news regarding an event. Advice has just been received from the RSGB that the date of their 7 MHz CW Contest, which they originally set for the 21st and 22nd February, has been changed. This contest will now run one week later than the date shown in January AR, and will now take place on the 28th February and the 1st March.

Although corrections like this normally go into AR, unfortunately in this case the advice was received too late to go into the magazine. If you know someone who is likely to enter the contest, please pass the new date onto them.

The dates again, 28th Feb and 1st March for the RSGB 7 MHz Contest.

This information was supplied by the Federal Contest Coordinator, Peter VK3APN.

ARRL DX Bulletin 006
February 12, 1998

NIGERIA, 5N. Bogdan, 5N3CPR, is QRV, especially on 30 and 17 meters. Check 10109 kHz between 0030 and 0130z and 18081 kHz around 1715z. QSL via SP5CPR.

ALGERIA, 7X. Driss, 7X4MD, is QRV on 20 meters using SSTV. QSL via operator's instructions. Ivan, 7X2RO, is QRV until mid year, including activity in all major contests. He is also active on 1818 kHz. QSL

via OM3CGN.

WESTERN MALAYSIA, 9M2, Saty, JE1JKL, is active from Kuala Lumpur as 9M2NK for at least two years. QSL to home call.

SOUTH SHETLAND ISLANDS. CE9AAP is QRV from the Chilean Capitan Arturo Prat Base. Activity is on 14180 and 14210 kHz daily from 2230 to 0200z. QSL via CE2LOL.

FRENCH POLYNESIA, FO. FO0BUS will be QRV until February 14 from a few different island groups. Look for CW activity on 40, 20 and 15 meters from Tahiti, Moorea, Rangitoa, Huahine, and Bora-Bora. Time permitting, the Tuamutu island group may be activated as well. QSL via W6MD.

HONDURAS, HR. Kris will be active as HR6/KA2OIG as a QRP station from Morgan's Cay from February 13 to 26. He can be found on the lower end of 30 meters. QSL to home call.

GUANTANAMO BAY, KG4. Look for KG4GC to be QRV in the upcoming WPX RTTY Contest. After the contest, look for KG4GC, KG4AU, KG4QD, KG4OS, KG4WD and KG4PK to be active on all bands and modes. QSL KG4GC via W4WX. QSL all others via operator's instructions.

BANGLADESH, S2. Ray, G3WZ, is active as S21YR using CW until February 20. QSL to home call.

EASTERN KIRIBATI, T32. T32O is QRV daily on 14131 KHz at 1830z from Kiritimati Island. QSL via WC5P.

NAMIBIA, V5. V51HK is QRV at 1300z on 24960 kHz. The length of stay is unknown. QSL via DL6OBS.

FALKLAND ISLANDS, VP8. Chris, G0TQJ, is QRV as VP8CXV using SSB on 20 and 15 meters. QSL to home call.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(06 FEBRUARY - 12 FEBRUARY)

ISSUED ON 13 FEBRUARY 1998

SUMMARY
Date 06 07 08 09 10 11 12
10cm 84 83 84 84 84 86 91
A 2 2 6 7 6 10 (10)
T 62 41 45 44 41 54 22

Solar was very low all week.

Geomagnetic activity observed at Learmonth, WA, was quiet 6th to 8th; unsettled, with an active period from 0300 to 0600 UT; quiet to unsettled on 10th and 12th; and quiet to active on 11th February.

Ionospheric F2 critical frequencies were mostly near predicted monthly values, except for an overnight period on 11th to 12th when frequencies were depressed up to 20 per cent.

FORECAST (13 FEBRUARY - 19 FEBRUARY)

Solar should be very low.

Geomagnetic: Quiet to unsettled.

Frequencies should be near predicted monthly values.

Courtesy of IPS Radio and Space Services

Castle Hill Military Radio Collection

A visit to the Castle Military Radio Collection at the Central Coast Field Day is a must.

Included in the display will be:

A ZC1 New Zealand Army transceiver from WW2
An MCR1 "Biscuit tin" spy receiver from the U.K.
A BC-966 identification Friend or Foe (without the explosives)
A 51J4 Collins Communication Receiver
An RA217 Racal Communications Receiver

And for those who thought they had seen everything.
the sets that the T1154/R1155 replaced, the RAF R1082 Receiver and T1083 Transmitter

The sturdy trailer will again be present for any donations of equipment, books or spare parts.

If you are in need of an elusive circuit for a piece of disposals equipment, please give Ian a ring on Sydney (02) 9680 2112 and he will endeavour to have the information at the Field Day for you.

CLUB NEWS

MANLY-WARRINGAH RADIO SOCIETY

This coming Wednesday is lecture night at the Manly-Warringah Radio Society. Taking a break from radio topics, James Nelson VK2LJN will enlighten us on the workings of the Stock Market. James, who has reportedly had considerable success in investments, will hopefully show us how to sort the bulls from the bears, so come along, "invest" an hour of your time, "take stock" of the situation, and "share" the experience...

Doors open at 7:30pm on Wednesday evening, and the lecture will start at 8pm. Members and visitors are most welcome to attend.

The Manly-Warringah Radio Society meets every Wednesday evening at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, with a business meeting on the second Wednesday and lecture on the third Wednesday of the month. If you need directions to get to the club, simply call in on the club two metre repeater on 146.875 MHz, or phone the club any Wednesday evening on (02) 9450-1746.

The Society is also on Internet, just enter "VK2MB" into your favourite search engine, or go to the "Sydney Metropolitan" section of the WIA (VK2 Division) clubs page.

-- Richard Murnane VK2SKY, for the Manly-Warringah Radio Society

---

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

AAPRA personnel shall be present at the Wyong Field Day to accept members dues, look for the AAPRA personnl. They will be easily distinguishable, and these personnel shall point you in the right direction to the personnel collecting the fees, and issuing receipts.

AAPRA is still in need of a public-spirited ISP to assist with a world wide gateway. If there are any Internet Service Providers that are interested and would like more information, write to the Association.

The address is: AAPRA
59 Westbrook Avenue
Wahroonga
NSW 2076

or ring the Secretary on 02 9489 4393.

AUSTRALIAN AMATEUR TELEVISION CLUB INC.

Interested in Amateur Television, then visit us at the Wyong Field Day next Sunday.

Do not forget, we are the only Amateur Television station which specialises in U-build it ATV equipment.

For more information about ATV, contact Bob the Publicity Officer on (02) 9587 3491 during normal civilised times -- and ring Bob for the Web site URL.

ANARTS AT THE FIELD DAY

THE CENTRAL COAST FIELD DAY IS NOT FAR AWAY. ANARTS WILL BE PUTTING ON A FINE DISPLAY AGAIN WITH A RTTY AND POSSIBLY AMTOR AND PACTOR, DISPLAY.

NEXT WEEK THE BROADCAST WILL BE TRANSMITTED ON THE SATURDAY AS ANARTS WILL BE AT THE CENTRAL COAST FIELD DAY. HOPE YOU CAN JOIN US

THEIR AND SEE OUR LITTLE SHOW.

FISHERS GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday evening from 7:00 pm at the Campbelltown High School, Chamberlain St, Campbelltown.

Also every third Tuesday of the month from 7:30 pm, at the Campbelltown High School, is the general meeting night with lectures on popular subjects. Visitors are always welcome.

NOTICE OF AGM

A reminder to members that the AGM is being held this coming Tuesday, the 17th February, at the club rooms. Meeting starts at 7:30 pm.

In addition to the 80 metre net on 3.580 MHz and the 10 metre Sunday net on 28.520 MHz, Hoss VK2ICE will run a CW practice net on 28.500 MHz Monday to Thursday starting at 7:30 pm local time. Hoss will be using his own call, and he will be glad to receive any call backs or signal reports.

WAVERLEY AMATEUR RADIO SOCIETY

The third Wednesday of every month is the club's regular meeting evening, so the next will be on February 18th at 7:15 pm for a 7:30 start. The clubhouse is in Vickery Avenue, Rose Bay, off New South head Road, next door to the Rose Bay RSL Club.

The club is proposing to demonstrate a range of computer software for ham use with programs for satellite tracking, circuit drawing, qso logging, packet, SSTV, rig control and so on.

A packet mailbox system has just been set up at the Rose Bay Club house, so if you want to leave a message or find out what is going on, just log in to VK2BV-1 on 144.850 MHz.

The Hornsby & District Amateur Radio Club Inc.

Remember, the first formal meeting for 1998, is on Tuesday 10th February 1998, commencing at 8.00 p.m. in the Mount Colah Community Centre, Pierre Close, Mount Colah (near the eastern entrance to the railway station). The talk this month, with video, is about the Open Night, and constructive criticism is welcome. All are welcome.

If you are interested in becoming an Amateur Radio Operator, remember the Club will again run classes in 1998, starting in mid March, and the club hopes to maintain the success rate of 1997. So enrol now and start

at the beginning. For more information, phone the Education Officer Tony VK2BTL on 9487 3383.

Join the Club net, it is held every Monday night at 8.00 p.m. on the Club repeaters VK2RNS and VK2RAT. The respective frequencies are 147.250, with a positive offset; and 444.975, with a negative offset. All amateur radio operators are welcome to join in. Listeners, tune your receivers to 147.250, or 449.974 MHz.

For more information regarding the Club, or its activities, write to:-

HADARC, PO Box 326, Hornsby, 2077

or phone John VK2WRT on 9807 2490

BROADCAST ROSTER

Next Saturday evening 21st February, 1998

Announcer: Tim VK2ZTM
Engineer: Jeff VK2BYY

Sunday Evening, 22nd February
Announcer: Alan VK2XAT
Engineer: John VK2FRJ

and tonight

Announcer: Peter VK2EMU
Engineer: Pat VK2JPA

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

2634. HR 2510 HELP BADLY NEEDED

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-24 00:00:00 UTC
From: n9xdw@aol.com
Message-ID: <19980224104501.FAA25287@ladder03.news.aol.com>
Source record: 177314

I recently purchased a mint condition HR 2510 mobile for use on 10 meters. The previous owner had admittedly turned down the carrier to a mere 3 watts! This is useless to me on the FM repeaters. Can anyone tell me how to restore this radio to it's full 25 watt capability? Mods and adjustments seem to be nowhere to be found. Please reply either to the NG or to:
N9xdw@aol.com Thanks and 73.

Are you sure there isn't a capability for adjustable power. The modification to drop power is common on the 2510s; 3 watts is optimum to drive most mobile amplifiers. But there is usually a provision for adjusting the power back to it's original output. Either a 2-position toggle switch on the back of the radio, or else the RF gain control has been modded to control RF output power (as on the Lincoln.)

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.misc

Hi - I am looking for the schematic or any additional
information about the P & H Electronics LA-400C
Linear amplifier. (From approximately 1961)

Has anyone tried modifying one of these for any different tubes?
I am going to install a power transformer that could be either
630-0-630V for the 1625 or possibly a 900-0-900 transformer
if I went to 811A bottles.

Mine is missing the 816 rectifier bottles, and it has some 837
tubes installed. I am going to switch to some other tube such as
1625 or 807, but wondered if 811As could work too.

I will probably go to silicon rectifiers, so COULD even switch to 6
output bottles (1625) but that might look ugly and require a larger
heater transformer.... ah the ossibilities!

I would like to get a photocopy of the schematic and of course
will gladly pay copying/postage charges.

Please reply here and via e-mail but DROP the
'NOSPAM' from my e-mail address. It is there to fool the
annoying bulk e-mail criminals.

Bry, AF4K

2643. What makes a receiver receive?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-24 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6cumk6$5lq$1@w3eax.umd.edu>
Source record: 177323

Tired of seeing the trash posts...

The antenna delivers voltage to the feedline, which
delivers a signal to a receiver's input. This signal
contains many, many frequencies, but you only need and
want one.

To this end, you build a resonant circuit - a tuned
device called a filter, consisting of capacitors
and inductors - and this circuit, due to the frequency-
sensitive nature of the impedance of caps and inductors,
passes a range of frequencies for which you've
designed the filter.

This new filtered signal gets passed through an amplifier -
usually a low noise, very small signal amp consisting
of a FET (Field Effect Transistor) or other device.

This gets filtered again because no amp is perfectly
"clean."

This signal is coupled to the next stage through a small
capacitor.

In the next stage, the incoming signal is "mixed" through
a nonlinear process with another frequency, producing
sum and difference frequencies. This freq. is generated
by a "local oscillator" and is often called the "LO."

An incoming signal at 7 MHz can be mixed with 9 MHz
and a filter can be built to pass the resulting 16 MHz
signal, which can then be worked on.

Mixers can be integrated, such as the NE602 ad SBL-1,
or can actually be an array of diodes (diode ring mixer).

Mix with another frequency if you like.

Run the signal through a special mixer to achieve the
resolution of the BASEBAND (modulating) signal. This
is called a product detector.

In order to receive a signal with no carrier, you'll
need to inject one into this stage. This would be
generated by the "Beat Frequency Oscillator," or BFO.

Filter for the very low freq. components (audio) and
put this signal through a few stages of audio amplification

and voila! You've got a superheterodyne receiver!

While not an overly technical description, this is
basically how a superheterodyne receiver works.

Maybe someone can explain how FM discriminators work?

Most receivers are identical until the detection stage.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <579>
.....
>From the mailbag:

From: kd6ykl@juno.com (Jim Piper)
ARES, Watsonville CA Operational Area has joined the ranks of other ARES groups who have airborne ATV assets, but with an additional twist: a down link carrying aircraft position/flight path GPS data.

One of our members own a Robinson R44 helicopter on which we load an ATV transmitter, Kantronics KPC3 terminal node controller (i.e., radio modem), camcorder, and ATV operator. The operator coordinates with the ground station via a Ham radio connected into the radio console of the aircraft. This makes the David Clark headsets available for radio comms plus lets the pilot (also a Ham) directly in on what is happening.

On the ground, live video of what the aircraft "sees" is viewed by the interested agency on a standard television set. At the same time, viewers can observe the aircraft position/track on a Street Atlas 4 map on a computer monitor situated next to the tv. To preserve mission data for later review and analysis, we tape record both the video and the position/track data on a vcr on the ground and in the camcorder in the aircraft. The camcorder recording becomes a backup in the event a radio path problem prevents good signal reception on the ground.

The City of Watsonville has enthusiastic accepted our offer of services and used us extensively during the recent storm problems and Pajaro River levee break. Though Watsonville gets first right of refusal for this asset, we offer our services to the other ARES/RACES groups throughout the Santa Clara, Santa Cruz, San Benito, and Monterey County areas.

Contact Bob Wiser / EC (408-728-4198) or Jim Piper/ AEC (408-662-2766) for further information. If ayone is interested in the technical aspects of our atv implementation, contact Jim Piper.

>From the mailbag:
From: kd6ykl@juno.com (Jim Piper)

I think Ed Addy / KE60EG made some excellent points in the 2/14/98 edition ofthe ACS Newsletter.

I'd like to add further comment Ed's excellent point about amateur radio operators responding from outside of a disaster area to assist. Housing and feeding those affected by a disaster can be a herculean effort in it self. Relief personnel (ARES Hams in this case) coming into a disaster area can exacerbate the relief effort rather than help reduce it. This was particularly demonstrated when Hurricane Iniki hit the island of Kauai. Hams came in with nothing much more than their radios -- further burdening the relief effort. In addition to the disaster victims, the relief agencies now had to provide for the Hams as well.

Amateur Radio operators assisting an extended relief effort MUST go in prepared with their own food, water, and shelter in addition to their radio equipment. To do otherwise, one becomes part of the problem rather than part of the solution.

Ed also addressed another problem that, too often, is demonstrated by Hams assisting with communications in a disaster: arrogance. Ham Radio, though an extremely valuable and flexible asset, is not the end solution to the communications problem. In a disaster, ALL communications media should be evaluated and exploited for its strengths. This certainly includes 11M (i.e., CB radio). Hams may sneer as they may at CB'ers. However, there are many out there who are just as anxious to use their equipment to help. In the San Lorenzo Valley of our own Santa Cruz County (CA), their has been an historic symbiotic relationship between Valley Emergency Communications (VECOM), a CB radio group and San Lorenzo Valley ARES. During disasters that don't overload twisted-pair communications, cell phones can be exploited for what they are good for: "private" point-to-point comms.

Jim Piper / KD6YKL
AEC for Training
ARES, Watsonville, CA Operational Area
.....

From: Tom Currie <Tom.Currie@worldnet.att.net>

Based on Executive Director Addy's comments in the 2/14/98 issue of the California ACS Newsletter, it appears NACEC should change its name to North American Center for Amateur Radio Emergency Communications.

The statement "Following a large disaster which has disrupted local communications, and most do to at least some degree, it is often true that the only folks in the area that are able to provide immediate communications support are those in the amateur radio community" is conceit of the highest order.

I won't take time to enumerate the many organizations who provide emergency communications BESIDES "the amateur radio community" -- certainly the California ACS roster is sufficient for that.

I will, however, point out that even when "the amateur radio community" is able to communicate in the aftermath of a disaster that communication is primarily internal to "the amateur radio community" with little connection to either government or non-government relief agencies and virtually no connection to the general public. This occurs largely because "the amateur radio community" tends to display exactly the conceit demonstrated in Mr. Addy's remarks. The amateur radio attitude in far too many communities is "WE are the [only] communicators." This is bad enough, but it is usually coupled with "We don't need any training, we're all experts in everything to do with communications, see we've got licenses."

As an amateur radio operator I have worked with ARES and RACES units in several parts of the country - and dealt with many more. The handful that are actually integrated in the community emergency response infrastructure are shining examples of what public service communications CAN be -- alas those shining examples are few and far between in my observations.

Tom Currie N4AOF

Operations Officer, Louisville METRO-REACT Team
Vice President, Kentucky State REACT Council
Secretary, Kentucky Voluntary Organizations Active in Disaster (KyVOAD)
.....

Reply-To: Tom.Currie@worldnet.att.net
Subject: My comments re Mr. Addy's comments

On re-reading my comments in the earlier e-mail, I realized that I should have made it clear that I do not view Mr. Addy as the source of the conceit I referred to in regard to his comments.

It is clear that he recognizes at least some of the problems with amateur radio emergency communications and he understands the need for other forms of communication in emergency situations. My challenge to his comments centers on the omission of the problems inherent to the amateur radio community.

The need to take care of one's own family, volunteer burnout, and the other problems Mr. Addy mentions are certainly all valid -- they are also valid of ALL volunteer-based emergency communications systems.

The one factor which appears to be unique (or at least nearly so) to the amateur radio community is the level of conceit demonstrated by many amateur radio operators and most amateur radio organizations (from the ARRL all the way down to local clubs). I can think of no other group who consistently represents themselves as the sole-source solution to emergency communications.

While Mr. Addy does a fine job of identifying the shortfalls of all unfunded volunteer-based emergency communications, even he falls into the mantra of "Following a large disaster which has disrupted local communications, and most do to at least some degree, it is often true that the only folks in the area that are able to provide immediate communications support are those in the amateur radio community." This is a view which exists almost exclusively within that "amateur radio community."

.....

From: Gary Peterson N0ZOD <n0zod@deskmedia.com>

I would like to endorse the observations and conclusions voiced by Mr. Addy, referring to the resources of communities struck by a disaster. The terrible floods that consumed so much in Minnesota and North Dakota just a year ago brought home to many of us involved in emergency communications, that whatever plan you have been looking at and planning for is outdated. There was so much neighbor helping neighbor in the Red River Valley that it truly made me proud to be associated with those individuals in some small way.
As a result of those floods and the communications problems that appeared, Minnesota ARES has adopted the plans of forming response teams that can be requested by any community in time of need. I emphasize "Requested". The teams are modeled after the ARESMAT structure, and there will be a team in place in each of Minnesota's area codes by Spring. These teams will be entirely self sufficient for 72 hours, at which time they will be relieved by other ARES members that will be assigned from a pool of operators from the entire state.
We learned in the Red River Valley that operators going into a disaster area will not be limited to amateur radio operations, or as a resource for a specific agency. The folks in the NW became experts in everything electronic and were asked to "provide a solution" to problems that didn't come out of the Radio Amateur's Handbook. They were flexible, and they did the jobs because they needed to be done. There were radio operators in the EOC in East Grand Forks answering questions about blocked roads, directing citizens to the various city offices, and yes, sitting down and talking to senior citizens and young mothers and fathers.
The next time you update your emergency plans, look outside the box and

prepare for the unknown, because it will probably happen. The most important thing I can tell you is; "Don't promise anything today you won't be able to deliver tomorrow".

From: "SR/DR '98" <srdr@NEWNORTH.NET>
Good Afternoon. We just wanted everyone on the USAR list was aware of the 2nd Annual "Search & Rescue/Disaster Response" Conference and Expo. SR/DR '98 comes to the Nashville, TN Convention Center June 25-28.

Please visit our web site at http://srdr.com

We'll have over 110 sessions presented by our 44 person faculty, live demos, a huge exhibit hall, and the Tennessee Valley Vehicle Extrication Competition!

Send us your address and we'll be glad to send you the attendee and/or exhibitor brochures. We hope you can join us this Summer at SR/DR '98!

>What's New on the Web:

Sonoma Operational Area ACS Home Page

http://cds1.net/acs/index.html

The Sonoma Operatioanal Area of the Auxiliary Communications Service in Sonoma County, California has just put up a well designed and easy to navigate site.

An ACS Author's Corner has a downloadable Field Operations Guide, Standard Operating Procedures and ACS Plans. Links can also take you to the Sonoma County main page, and other related sites.

If you are a member of an ACS organization, or just want some information on what the ACS program is all about, be sure to stop by and bookmark this site.

Don't forget to send them email at: acs@cds1.net
Have a Volunteer site you'd like to see Showcased? Email larton@garlic.com

From: Philip Sinewe <psinewe@ERINET.COM>

Hi folks:
In the process of updating my web site I found this nice tool. It is FEMA's search engine for web site links. It is very nicely done.

>This week's EMCOMM Bulletin:

EMC120 Unit Priorities 1/3 For release 2/23/98

The city of Huntington Beach, CA has been mentioned in prior EMCOM bulletins for their CERT and RACES programs. Here is an eye-opener about unit priorities by Glorria Morrison, KE6ATG, Emergency Services Coordinator. From their RACES Newsletter, Volume 5, Issue 3, July l997 and quoted verbatim from the article "RACES Priorities". Although addressed to a city RACES unit, it can apply to almost any government EMCOM unit:

Have you ever wondered exactly what RACES priorities are in a disaster? During the onset of a disaster, there may be dozens of communication failures including: phone systems, fire and police radio repeater damage, damage to school radio systems, cellular phone site damage or overload, etc. This will require and immediate competition for Amateur Radio resources. In the City's disaster plan, RACES is the City's auxiliary communications system in case of communications failures. But how will RACES prioritize all the requests for help?

Step One - Personal Preparedness. There are presently 82 RACES members on our roster. How many of you are able, at this very moment, to pick up your bag of radio equipment and personal supplies and head for the door? How long would it take to get your act together and respond? Remember, (1) take care of yourself, (2) your family, and (3) your home. When the time comes, believe me... you had better be ready to go! If you're not, please take the time today to assemble your personal Grab 'n Go Bag and your radio equipment bag.

Step Two - Activation and Reporting. How will you be activated? Those of you that have the Plectrons will be

activated by the RACES Management Team who will report to the
EOC and call tones. However, if the emergency is one that
shakes us out of bed and lets us know we are activated prior
to the tones being called, you should immediately turn on your
radio to the RACES frequency xxxxx MHz and be prepared to
check in. You will be given your instructions by radio.
Instructions may include: Report to the RACES Staging Area at
[location deleted for this article]. There, you will be given
your assignments. Or perhaps you will be sent directly to a
School District EOC, the Central Library, Senior Center or a
Fire Station. You must be ready to respond. Do you have a map
of Huntington Beach and are you familiar with the location of
the fire stations, city facilities, police sub-stations,
schools and school district offices? These are the most
likely locations you will be sent to. Get your map out today
and review these locations. We will review these sites at our
next general meeting."
(Continues next week)

>What a great paradox for Jeffy!

No paradox at all, Drew. I live in Hawaii! I have my spear fishing,
diving, sailing (my sailboat is about 100 yards from the condo), and
flying (I'm studying for my private pilot's license). I can't see the
government taking 160m (the "Gentlemen's Band") away from us (that "us"
doesn't include you, since you don't have 160m privileges), but even if
they do, I'll build Part 15 transmitters for the 1750m Experimenters Band
and try my hand at communication down there (CW, of course). Heck,
Part 15 even allows us to operate QRPp transmitters on the AM broadcast
band - that was my first homebrew project as a kid - the neighborhood
kids used to have an MCW net on that band - great fun! It was, and still
is, legal, as long as power and antenna+feedline regulations are obeyed.
And *that is* the difference between you and I, Drew - I do obey the law.

Jeff KH2PZ

P.S. It's almost 0530 - time to head to the beach for my morning swim!

And you come across as a self-important geezer, similar to
Len Anderson, fixated on a single aspect of the amateur radio
service. Masa may not conform to your ideal model (or mine) of
an amateur radio operator, but your ridicule of his postings is
ill-mannered and unbecoming, especially since he is licensed
by another country with rules different from ours.

There's someone I know who has wanted a HF license for years and
code IS holding her back because she's dyslexic and can never learn
it. And because international treaties override U.S. laws, even the
Americans With Disabilities act apparently can't get her waived on
the code requirement. Something to consider; that treaties can give
away our national sovereignty that way.

I personally think *requiring* code for amateur radio today, is like
requiring someone to learn how to ride a horse before allowing them
a drivers license. I'd like to see the CW bands stay around for
those who like it, but don't think it should be required anymore.
